

SYSTEMS OF LAND TENURE

IN

VARIOUS COUNTRIES.

*A SERIES OF ESSAYS PUBLISHED UNDER THE
SANCTION OF THE COBDEN CLUB.*

EDITED BY J. W. PROBYN.

NEW EDITION, REVISED AND CORRECTED.

CASSELL, PETTER, GALPIN & CO.:
LONDON, PARIS & NEW YORK.

[ALL RIGHTS RESERVED.]

THE COMMITTEE of the COBDEN CLUB have gladly complied with Mr. Gladstone's suggestion, contained in the accompanying letter, by at once publishing a new edition of the "Systems of Land Tenure in Various Countries." The Committee have to regret the death of three of their original contributors, Mr. Wren Hoskyns, Dr. Julius Faucher, and Mr. C. M. Fisher, whose essays have therefore been re-published just as they were written. Ill-health has unfortunately prevented Mr. Cliffe Leslie from bringing up the facts contained in his essay on the French Land System to the present time, but it remains substantially a fair description of that system, though in arrear of the statistics now attainable. The essays of Judge Longfield, Sir George Campbell, and Mr. Brodrick have been carefully revised, and have had additions made to them, by their respective authors. Mr. Morier's "Agrarian Legislation of Prussia" has been supplemented by the publication of his "Report on the Tenure of Land in the Grand Duchy of Hesse," sent to the Foreign Office in 1870. A classified Index, which will be found at the end of the volume, has been added to the present edition.

The Committee of the Cobden Club hope and believe that this new edition of their volume on Land Tenure will be of real service to all who are interested in this important question, which is occupying more and more the attention of the whole country.

J. W. PROBYN.

March, 1881.

10, Downing Street,

Whitehall.

Jan 31. 81

My dear Mr Bengley Potters
Is your (Cobden) Volume on
Systems of Land Tenure
accessible to the public
at this time? and if it is
out of print would you
be disposed to consider the
propriety of issuing a new
edition? Yours sincerely
W. L. G. Stowe

SYSTEMS OF LAND TENURE IN VARIOUS COUNTRIES.

I.

THE TENURE OF LAND IN IRELAND.

BY THE RT. HON. M. LONGFIELD.

CHAPTER I.

THE laws which govern the relation between landlord and tenant are not very different in England and Ireland; but there are some differences in the pedigrees, and in some collateral circumstances, which have made them produce very different effects. I shall mention a few of those circumstances.

In both countries the law is based upon the feudal system, which gave the landlord a certain superiority over his tenants. But the feudal relation, with its reciprocal rights and duties, never existed in Ireland. Here the landlord never led his tenants to battle; if they fought in the same field, it was on different sides. They had no traditions of common victories or common defeats. The relations that existed between them were hostile. According to the old feudal law, the lordship could not be transferred without the consent of the tenant, lest an enemy might be made his feudal superior; but in a great part of Ireland a sudden and violent transfer of the lordship was made to persons whom the tenants only knew as their victorious enemies.

The feudal law of distress was increased in force, to make it a more powerful instrument for extracting rent from a reluctant or impoverished tenantry. The old laws, which were unduly favourable to the landlord, were generally retained, as if they had been unalterable laws of nature; but they were at once altered when they appeared to afford a temporary protection to the tenant.

Take the case of a disputed account between the landlord and tenant. The former maintains that a year's rent is due to him; the latter insists that he owes nothing. Do they come before a court of justice on equal terms, to have this question tried? On the contrary, the landlord, as the feudal superior, takes the law into his own hands, and without making any proof of his demand, he sends his bailiff to seize the goods of the tenant. The landlord was not obliged to apply to any officer of the law, or to give any security to pay damages if his demand should prove to be unfounded. But it was otherwise with the tenant; if he saw his goods distrained by this summary process, he could not get them back without a troublesome replevin, which he could only get by giving security to pay the sum demanded. To discourage him from contesting the landlord's rights, he was compelled by an Act of Parliament to pay double costs if he failed. Still, at common law, the distress, or goods distrained, could not be sold; and a tenant, ruined and driven to despair, might submit to the loss, and still refuse to pay; but an Act of Parliament was passed to enable the landlord to sell the goods and pay himself.

Still, he could not seize the tenant's crops while they were growing, as by the common law crops while they were growing were considered as a part of the soil and freehold, and could not be distrained. But here Parliament again intervened, and passed a law to enable the landlord to distrain the crops while they were still growing, so that as soon as the corn appeared above the ground he might send his keepers to take possession, and cut and carry it away when it was ripe.

If the tenant removed his goods to avoid a distress, an Act of Parliament intervened to visit him and the friends who assisted him with a penalty, although the landlord himself may have been at the same moment hiding his own goods to evade an execution.

In the same manner Acts of Parliament were passed to give the landlord the power of evicting his tenant for non-payment of rent, and of recovering possession of the land in cases in which he was not entitled to this remedy either by the terms of his contract or by the rules of the common law.

Those laws were injurious by leading the landlord to rely more on the extraordinary powers given to him by law, than on the character of the tenant or the liberal terms on which he set

his land ; but I refer to them now as co-operating with other circumstances to lead the poor Irish farmer to the opinion that the laws were framed entirely in the interests of the landlord class.

Here one important difference between English and Irish law must be noticed. In Ireland there were no poor laws. The poor man, reduced to destitution by sickness or want of employment, had no legal claim to a maintenance out of the property of the country. I allude elsewhere to other effects of the poor laws ; but the point which I now notice is, that, notwithstanding all the abuses attending on the administration of the poor laws in England, they had this effect, that the poor man could not shut his eyes to the fact that the laws were in some part framed in his interests, and that for the relief of his class a large sum was levied every year from the wealth and successful industry of the community.

Another circumstance tended to diminish the respect of the people for the law of the land. Religion did not, and could not, lend its aid to the authority of the law. The great mass of the agricultural population was Roman Catholic ; and the Roman Catholic priest, their minister and instructor, was in some respects under the ban of the law. He could scarcely be an effectual teacher of the doctrine that it is a moral duty to obey the law of the land, when he himself was obliged to violate it almost daily in the discharge of his most sacred functions.

Of all laws, those which are framed for the protection of property are the most likely to be disregarded by the poor man. The man who never possessed any property can scarcely feel the duty of respecting it. He must be taught that duty, either by arguments, which do not bring conviction to all men, or by some authority which he respects. But the Roman Catholic priest had no property of his own, and he generally belonged to a family which did not possess much property. He had therefore no sympathy with the landlords, who, in general did not belong to his flock. Religion, which ought to be the great bond of union between men of every race and every class, was in Ireland an additional source of disunion.

Under such circumstances, it was not surprising that the Irish farmer was generally discontented with his position, although the landlords did not give him much cause of complaint. As a class, the Irish landlords were not greedy nor

oppressive. They did not plunder their tenants, but they neglected them.

For some time after the Act of Settlement, leases were granted more readily and for longer terms in Ireland than in England. Fee-farm grants, leases for lives renewable for ever, and leases for terms exceeding one hundred years in duration, covered no small portion of the soil of Ireland. But those long leases, at moderate rents, did not produce a contented tenantry; they only created a race of middlemen. The descendants of the men who granted those long leases had the mortification of finding that they were deriving a very small income from their estates in proportion to the value of the land, and yet that the occupying tenants were as poor as if they had rigidly demanded the utmost penny that the land could yield. It was felt to be bad management to grant such leases; and leases for three lives, or twenty-one years, or thirty-one years, were more usually granted in the latter half of the eighteenth century. The leases for lives were in some measure caused by the law which existed up to the Reform Bill. Freeholders alone could vote at an election for Members of Parliament; and this state of the law was injurious to agriculture by leading to a very inconvenient tenure. It was almost absurd that the duration of a farmer's interest should be made to depend upon such an accident as the longer or shorter duration of a stranger's life.

Although leases for lives were very common, their duration appears not to have been understood. It was very common in settlements to insert powers of granting leases for three lives, or thirty-one years, as if those leases were of about equal average duration; although in reality the average duration of the freehold was about double that of the chattel interest. In computing the compensation due to a landlord for renewal fines, it was assumed that a life to be named by the tenant would expire in seven years; and this gave the landlord, as compensation, more than five times what he had lost by the tenant's neglect.

In the early part of this century a great rise took place in the value of land, as the French war and the depreciation of the currency raised the price of agricultural produce. The tenants who had previously obtained leases became rich. The landlords who had not granted leases obtained a great accession to their income. The landlords who had granted leases

found themselves poorer, inasmuch as their nominal income remained the same, while its purchasing power was diminished. This increased the desire of the tenantry to obtain leases, while it made the landlords less disposed to grant long leases.

In 1816, and the three following years, land fell again in value; and the tenants who had got leases or farms during the high times were unable to pay their rents. In many cases they ran away and abandoned their farms; in other cases they put their landlords to the delay and costs of an ejectment; in other cases they were permitted to remain in occupation at a reduced rent. The landlords then perceived that a lease was a one-sided agreement. It prevented the landlord from obtaining the benefit of a rise in prices; but it did not prevent him from suffering if they fell.

Still, leases were frequently granted from political motives. The tenants, as a matter of course, voted as their landlords directed them; and the landlord increased his political influence by granting freehold leases to a numerous tenantry.

This condition of affairs was changed by the agitation that preceded the Act for granting Catholic emancipation; and first in the county of Waterford, and afterwards in a still more remarkable instance in Clare, the tenants voted against their landlords' wishes; and the latter had no longer any political inducement to grant leases to their tenantry; indeed, political motives rather acted in the opposite direction.

Although it became less usual to grant leases, the tenant was generally left undisturbed in possession at the old rent. Nothing was more common than to find a yearly tenant holding land at a rent fixed by a lease which had long since expired. No general change in the value of land took place of sufficient magnitude to cause a readjustment of rents.

But in the year 1846 the potato crop throughout Ireland generally failed; a fall greater than had ever taken place on any former occasion took place in the value of land. The tenant found that the possession of a farm could not secure him against starvation. Landlords were compelled to submit to a considerable temporary abatement. In 1851 the reaction commenced; landlords added to the rent by degrees the sums that had been taken off during the famine; and in some cases they added a little more. Frequent small additions to the rent are very annoying to the tenant, who on each occasion has to calculate whether it is more prudent to submit

to this increase, or to incur the inconvenience and expense of giving up his farm and looking out for another.

Another circumstance occurred about this time. The Encumbered Estates Court was established in 1849, and many estates were sold subject only to existing leases and legal rights. The new landlords were more active, and effected more improvements in the land than their encumbered predecessors; but they were less indulgent to their tenants; old traditions of liberality were disregarded, and the new landlords were more disposed to exact the full value of the land. They also sometimes introduced changes which, although to the advantage of the country and of the tenantry, were looked upon with suspicion, on account of their evident advantage to the landlords. The tenants did not like any interference with their customs, even when it was obviously for their interests.

On the whole, however, the condition of the Irish farmers steadily improved. The value of land increased faster than the rents. Never were they more prosperous than at the present moment. The marketable value of the interests which the occupying tenants have in their farms is about fifty millions sterling, exclusive of their stock in cattle, machinery, and agricultural produce, which is worth as much more.

But at the same time they never were more discontented. The reason of this is partly that they fear that their present prosperity is insecure, and partly that they hope to seize upon something more. Their wealth is as safe as that of any other class, so far as it depends upon their capital, or their skill and industry; but it depends upon the will of the landlords, so far as it is a consequence of their holding land at less than the competition value. They are too dependent upon their landlords. It is not convenient that the prosperity of one class of men should depend upon the liberality of another class.

Besides, in many cases the tenants hope by agitation and outrage to acquire more than they at present possess. They have great political power, and are able to reward the agitators who inflame their passions or their cupidity. They are taught to believe that it is in their power to acquire the absolute ownership of the land which they have hired for a limited period. Their well-founded complaints are mixed up with the most unreasonable demands; and by skilful sophistry and metaphorical language they are almost led to believe that murder may be justified when it is committed from motives of

avarice or revenge. Before we endeavour to draw a distinction between the just and unjust demands of those who call themselves the tenants' friends, a question may be asked. "Will outrages against life and property cease when everything that justice requires shall be conceded?" I do not think the question very important, because the claims of justice should be allowed, even if no beneficial results were expected. But the question itself cannot be answered by a direct "Yes" or "No." Whenever any just measure is passed, all discontent is not at once allayed. All that ought to be expected is to reduce the number of the malcontents, and to diminish the vehemence of those who remain dissatisfied. The friends of law and order are strengthened by an increase of their numbers, and by the removal of many of the topics on which their adversaries are accustomed to rely. In this manner a succession of just measures may produce such an overwhelming majority in favour of the law as to reduce the discontented to silence.

I do not expect such a result in Ireland to follow immediately from any legislation, until the people are taught to look upon murder with horror. If all the land in Ireland was divided in fee-simple among the peasantry, the number of murders would not be diminished. The difference would only be in the heading of the sensation paragraphs in newspapers. Instead of an "agrarian outrage," it would be called a "domestic tragedy." The same feeling that prompts a man to murder his landlord, to prevent or revenge some real or imaginary wrong, would lead him to resort to the same remedy against a sister who claimed her fortune at an inconvenient time, or a brother who did not agree with his views respecting the partition of the estate.

Good consequences may be confidently expected from just legislation, although those consequences may not appear so quickly as sanguine people often expect.

It is not certain that the discontented farmer thinks that all his demands are just and reasonable, or that he expects them to be conceded. A farmer is generally disposed to make a bargain, and to begin by asking for a good deal more than he expects to get.

CHAPTER II.

THE opinions of English and Irish economists generally are different on the subject of absenteeism. The Irish, who feel it, think it a great evil. The English, who do not feel it, think that it does no harm to the country. It does not, however, follow that the Irish are right, for they may perhaps have fallen into the mistake of attributing to absenteeism evils which co-exist with it, but are not caused by it.

For a short time the defenders of absenteeism had the arguments of logic on their side. The complainants made a mistake in the form of their complaint. The mercantile system was in full vogue. Money was thought to be synonymous with wealth. Every transaction which brought money into the country was supposed to increase its wealth, and every cause that led to the exportation of money was held to impoverish it. With this belief, nothing was more natural than to complain of the rents remitted to England to absentee landlords, and to calculate how much it amounted to in the course of half a century. It was no matter to be surprised at that Ireland was poor, when so much money was annually sent away without any return. The kingdom was in the same condition as if it paid a tribute to England equal to the amount of rent paid to the absentees.

The answer made to such complaints was, that no money was sent out of Ireland to the absentees. Commodities, chiefly cattle and corn, were exported; these were paid for by bills, and the produce of those bills applied to the payment of rent to the absentees. Even if money was sent here to pay for the cattle, and that money paid to the absentees, it would come to the same thing in the end. The rent is still substantially paid, not in money, but in that agricultural produce by means of which the money was procured. As to the wealth sent out without return, that is treated as a matter of no consequence. No one has any cause of complaint. A hundred pounds' worth of corn is sent to England, the produce of that corn is paid to the landlord. He buys a hogshead of French wine, which is consumed by himself and his family. How are the Irish

people worse off than if that hogshead of wine was consumed by the same persons in Ireland?

It might perhaps be admitted that Ireland would not suffer much by the absence of any landlord who, if he was present, would do nothing with his income except buying French wine. But in fact a landlord does not in general spend so much as half his income in the purchase of foreign goods. The greater part of his income is employed either in paying for services, or in the purchase of goods produced in the immediate neighbourhood. It makes a great difference to the producer whether his market is close at hand, or whether he must send his goods to a distance to seek for a customer; and this difference will be the greatest when the goods which he produces are bulky in proportion to their value, and when the roads and other means of communication are bad.

It may perhaps be said, "Let him produce such goods as may be readily exported, as he ought to know that he must seek a distant market." But in a poor and ignorant agricultural community the producer has no choice. He can produce certain things, and nothing else; and it would be a dull mockery to tell the family of a poor peasant, who can find no convenient market for his eggs, and butter and poultry, and honey, and the services of his children, that he ought to employ himself in making clocks and watches, or brushes, or gloves, or cloth, or paper. He earns his bread from day to day by the only business that he understands, however imperfectly, and he never saw any one employed in any other pursuit, and he has no means of getting into any other industry.

Let us abandon the argument derived from the balance of trade, and examine the effect of absenteeism upon the small village of C. All the property in the neighbourhood, to the amount of £20,000 a year, belongs to absentees. There is not a gentleman's house or garden near it. There is very little traffic, and the roads are bad. The post arrives and departs at inconvenient hours, as there is not sufficient correspondence to induce the Post-Office authorities to incur any expense in improving the postal service. There are no public conveyances, as there is not traffic enough to support them. The shops are few and ill-supplied, goods are sold at a high price, and yet for want of sufficient custom the profit of the shopkeepers is very small. The district cannot support a market, and the people are obliged to travel a considerable distance for their supplies.

The peasant finds it impossible to obtain any price for butter, eggs, poultry, and other small rural produce. They cannot be sold in the neighbourhood, and the expense of carriage to a distance consumes nearly the entire value. There are no means of education. One medical practitioner, with very little skill, has the monopoly of an immense territory, from which he obtains a scanty subsistence, as the gentry who are able to give him fees are absentees. Agriculture is in a very backward state. The implements are of the worst kind. The cattle are of the most unprofitable breeds. No improvements in either cattle or implements have been introduced within living memory. There are no gentlemen of wealth and education to know what is done in other countries, to make experiments, to instruct the people, and to introduce improvements. I am writing about the state of things in the beginning of this century.

The following extracts are taken from a report on the state of the King's County, presented by Sir C. Coote to the Royal Dublin Society, in the year 1861 :—

“BARONY OF GESHILL.

“Every acre of this barony being the estate of Lord D., it is almost entirely inhabited by farmers. They use the old Irish plough and harrow, and none of the improved kind are yet amongst them.” “In this barony there is not a single town, and only two villages, those of Killagh and Geshill, but no market held in either, though each has a patent for one.” “The roads throughout this barony are shamefully bad, and at times almost impassable. Deprived of a resident gentry, this district is in a lamentable state of neglect.” “Farms run from fifty to three hundred acres; farm-houses have only the appearance of warmth; and if we except Dean D.’s, Mr. V.’s, and Mr. W.’s, they have nothing of neatness to recommend them. The tenant is obliged to repair: the old leases were for thirty-one years, or three lives, few of which now exist; those of later date do not exceed twenty-one years, and non-alienation is insisted on.” “There is no want of bidders to every farm out of lease; and the highest gets the preference.” “Where such short leases only are granted, little real improvement can be expected; the tenant is discouraged from it, lest he should have his rent raised in his next tenure to the value of his improvements, which he

is fairly apprised of, the highest bidder having always the preference. When the peasantry become more civilised, perhaps this rigorous mode will be abandoned, and real solvent tenants may be granted encouragement proportionate to their abilities and industry."

I may add that the owner of this estate was not an encumbered proprietor. He died without issue, and worth nearly a million sterling, and some of the leases which he granted were impeached by his successor.

Sir C. Coote's account of the Barony of Geshill is the natural description of a large property owned by absentees. The object was to give an account of the agriculture of the county; and he did not refer to those inconveniences which a resident only can feel.

Let us suppose that some of the proprietors return to reside in the district which I have described; and consider the results which are likely to follow. A better description of agricultural implements is introduced. The common cart of the country, with its wheels of solid wood without spokes, which only turn with the axle, gradually disappears. It draws only two hundred-weight, and is replaced by a cart with spoke wheels, which will draw from ten to twenty hundred. The improvement is introduced by a resident gentleman who is acquainted with the superior vehicle. He employs carpenters to make them; and these men and their apprentices are again employed by the farmers in the neighbourhood, who quickly perceive the benefit of an improvement which they see in actual operation, at the same time that the means of making the improvement are placed within their reach. The same thing occurs with respect to ploughs and other agricultural implements. The farmer is generally unwilling to alter his practice in submission to any theory or to any arguments. He will not adopt an improvement unless he sees it in actual successful operation.

In the same manner the resident landlord is the means of introducing an improved breed of cattle, a better rotation of crops, and that improved cultivation which he has witnessed in other parts of the country. He is the living mode of communication between the ignorant backward district and the more improved and more civilised parts of the kingdom. The resident gentlemen attend to the state of the roads, and insist that they shall be well made and duly repaired. They support by their advice and subscription schools, dispensaries, and

various institutions of utility or charity. They assist in the preservation of the peace and the local administration of justice. The increase of correspondence caused by a number of wealthy residents leads to improved postal communication. The traffic and travelling of themselves and their families, their friends and their tradesmen, lead to the establishment of public conveyances, which formerly could not have been run without a loss. All the residents enjoy the advantages of these conveyances. The custom of the resident landlords is a great assistance to the shopkeepers in the neighbourhood, and enables them to keep a better selection of goods, and to sell them at a lower price, and yet a greater profit to themselves. The resident gentry must have houses, offices, and gardens, which become part of the wealth of the country, and require masons, carpenters, and workmen of a superior description to make them and keep them in repair. I need not proceed further to enumerate the advantages which may be confidently expected from the residence of the landed gentry on their estates. They are certainly not met by the argument that the rents of absentees are not remitted in gold and silver, but in bills purchased by the sale of Irish commodities.

We are not to consider merely the effects of absenteeism in the abstract, but its effects upon a poor ignorant country such as Ireland was. It can hardly be doubted that the whole social system must suffer from the absence of one important class. A great gap is made by the want of men with knowledge, wealth, or leisure for anything more than the supply of their immediate pressing wants. The cases I have supposed of the utility of a resident gentry, and the inconvenience of their absence, could readily be supported by reference to facts.

The causes of absenteeism are partly the superior advantages which England by nature possesses over Ireland. Its civilisation is older and more advanced. It is a larger country, with a finer climate, much richer in its mineral productions, and is more conveniently and centrally situated. The most convenient way for an Irishman to go to any part of Europe is to pass through England. Ireland will always bear to England a relation like that of a provincial town to the metropolis. But this does not entirely account for the extent to which absenteeism existed.

The chief cause is to be found in the confiscations and grants which took place in the time of Cromwell, and confirmed by the settlement made in the reign of Charles II. By those

grants large estates fell into the hands of Englishmen who would not, for ten times their value, have left their native country to dwell in such a barbarous and disturbed country as Ireland was. Accordingly they remained in England, and set their newly-acquired estates in large tracts to tenants who undertook to manage the land and pay the rent. The leases were generally made at moderate rents, and sometimes for very long interests. The laws relating to land made it easier for men to set than to sell their estates; and from this cause the estates remained in the same families, and absenteeism continued to prevail.

It is, however, diminishing. In his *Political Anatomy of Ireland*, Sir William Petty computed the absenteeism of Ireland to extend to one-fourth of the real and personal property of the kingdom. Lists of absentees, with their names and the value of their estates, were published in 1729, and again in 1769. Many of the estates mentioned there have since been sold, and purchased by men who reside in Ireland; and in many other cases where the estates remained in the same families, the present representatives reside in Ireland for a considerable portion of the year. It may be answered that, although those particular estates are no longer held by absentees, there may be other estates now possessed by absentees, which were then held by residents. I do not, however, believe that this has occurred to any considerable extent. Especially it rarely happens that the purchaser of an Irish estate becomes an absentee. Of the estates sold in the Encumbered Estates Court, a very small proportion was bought by Englishmen or Scotchmen, and even in those cases the purchasers frequently came to reside in Ireland.

But not only has absenteeism diminished, but even when it exists it is less injurious now than it was formerly. This is the result of several causes. The roads are no longer dependent upon the great proprietors for their existence or repairs. The ratepayers now are permitted to take an active share in this part of the county business, and county surveyors are officially appointed to see that all contracts for the formation and repairs of roads and bridges are duly performed. The poor laws now compel the absentees to contribute their fair proportion to the support of the destitute poor. The dispensaries are supported by a compulsory rate, and no longer depend upon the casual subscriptions of the resident gentry. A large Parliamentary

grant gives equal independence to the education of the poor. The appointment of stipendiary magistrates gives assistance to the residents, and supplies the places of the absentees. The penny postage and the cheap newspaper press bring information to every part of Ireland. Steam has almost made a bridge across the channel, and railways are now made to places that were formerly inaccessible. Thus in the Barony of Geshill, in which there was such a want of good roads in the beginning of this century, there is now a railway station; and it is easier now for a man to travel from Geshill to Dublin than it was then to go from one part of the barony to another.

Besides the changes just mentioned, another cause tends to mitigate the mischievous effects of absenteeism. The wealth of Ireland not derived from the rents of land has considerably increased. Taking round numbers, we may say that in the course of two centuries the population has increased five-fold, the rental has increased fifteen-fold, and the general wealth of the country has increased fifty-fold. It is probable that the marketable value of the interests which the occupying tenants have in their farms is about fifty millions sterling.

But absenteeism is still an evil, although not so great as it was; and it may be asked, "Can anything be done to mitigate or prevent it?" Legislation is slowly moving in this direction. One great truth is gradually dawning on the public mind, that every matter of public importance (not of private interest) should be undertaken by the State, and not be permitted to depend upon the casual contributions of benevolent individuals. Whatever ought to be given to the poor, beyond what they can obtain by their own exertions, ought not to depend upon the accident of their living in a rich and liberal neighbourhood. Several of the changes which I have noticed in our legislation follow at once from this principle.

Nothing would more tend to diminish absenteeism than free trade in land, and the absence of all restrictions that impede its transfer. There is a natural tendency in property to move towards its owner, or in the owner to move towards his property. Thus, in the case of a great Irish railway, it was thought expedient, soon after it was formed, to compare the interests of the English and Irish proprietors. It was then found that, although the two classes were equal in number, the English proprietors held two-thirds of the stock. Some years afterwards the same comparison was made, and it was found

that the proportions in the meantime had been reversed, and that the Irish proprietors held twice as much stock as the English. The change has since gradually gone on in the same direction.

But there is a much greater tendency in land than in railway shares to belong to the residents of the country in which the property is situated. A railway share is merely a right to receive a certain proportion of the profits made by the company. What those profits are can only be known from the accounts, which are equally accessible to the nearest and the most distant proprietors. But land is something different; it is more than a mere income, and an intimate acquaintance with it is necessary in order to know its value, present and prospective. No person has any special desire for a particular railway share; but when any land is to be sold, it frequently happens that there are several persons who know its value well, and to whom that land is more desirable than any property of equal value in any part of the kingdom. Such persons must be residents in the neighbourhood, or at no very great distance, and they are therefore the most likely to purchase it.

The principal laws that prevent that frequent transfer of land which would put an end to absenteeism, are the law of primogeniture, the heavy stamp duties on conveyance, the law which permits property to be settled on unborn persons, and the general complications permitted in the titles to real property. Something has been done to facilitate the transfer of land by the creation of the Landed Estates Court; but it is an inconvenient anomaly, and exhibits the imperfection of the law, that a lawsuit should be thought the best and the most expeditious mode of selling an estate. The Record of Title Act has been passed to facilitate further the transfer of land; but it has not been very effective, and as long as settlements are permitted, the transfer of land cannot be free from difficulty.

CHAPTER III.

A VERY injurious custom prevalent in Ireland, and encouraged by the law, was the permitting an accumulation of arrears of rent to remain due by the tenantry. In many districts in the south and west, every tenant was in the condition of an uncertificated bankrupt, whose debts amount to more than he can ever hope to pay.

It is difficult to conceive anything more calculated to destroy the energies of a tenant than the consciousness that no amount of skill, industry, or economy can improve his position, while idleness and prodigality can hardly make it worse. This is the state of a tenant who holds his land at a rent rather higher than he can afford to pay, and who finds that each year adds to the amount of arrears due to his landlord. If any lucky accident should increase his fortune, or add to the value of his farm, it is a gain to his landlord, but no benefit to himself; while a bad crop, whatever be the cause of it, only makes an addition to the bad debts due to his landlord, but is no concern to himself. As long as he owes more than he can pay, he is equally in his landlord's power, whether the arrears amount to fifty or to five hundred pounds. The landlord, if he wishes it, may seize all his goods, and evict him from his farm. His only hope lies in the forbearance of his landlord, *from whatever motive that forbearance may proceed.*

A tenant in this position will never make any payment until he has made every effort in his power to evade it. When he pays a portion of his rent, he feels himself so much the poorer; his property is less by the amount he has paid; but he does not obtain in exchange that independence and freedom from debt which in ordinary cases are the results or the motives of the payment. It is a most unsatisfactory thing to pay money, and yet to remain hopelessly insolvent.

Why, then, does he pay anything? He does it in order to avoid a distress, or an action, or an ejectment. He knew that he cannot expect to retain possession of his farm without paying something; he must only feel his way, and try to pay as little as possible. Hence a perpetual effort to avoid payment,

by pleas of distress and poverty, and a contest between the landlord and the tenant. The former is uncertain whether the latter's pleas of poverty are true; the tenant is uncertain whether the landlord is serious in his threats of taking legal proceedings. The contract is disregarded, and the parties have no guide to direct them how much they may demand and how much they ought to concede.

When a single tenant succeeds in reducing his rent by pleading inability, every tenant will endeavour to do the same. A man will almost think it a hardship to be compelled to observe his contract, when he sees that his neighbour is permitted to evade it. The feeling of independent honesty is gone. The insolvent tenant is not looked upon in the same light as an ordinary debtor who is unable or unwilling to pay his creditors, but is considered as a man who has made a skilful bargain; for the payment of each gale of rent is made the subject of a separate bargain. I could narrate many instances in which tenants succeeded in their plea of poverty, and were afterwards by accident discovered to have been in possession of money far more than sufficient to pay their rent twice over.

I have known many estates in which no account was ever settled between the landlord and the tenant. Payments were made from time to time, but the tenant cared very little whether they were placed to his credit or not.

This vicious custom often led to the offer of rents which the farmer knew he could not pay. The solvent farmer who hoped to cultivate the land skilfully, and to derive a profit from his industry, and skill, and capital, and to pay his rent punctually, had no chance of getting a vacant farm against the competition of a man who did not intend to fulfil his engagements.

Thus the system tended to throw the lands into the hands of dishonest or insolvent tenants. Such men began by promising to pay more than the land was worth, and ended by paying less than its fair value. Those tenants were not only unable from want of capital to make the land productive, but it was also their interest to avoid high and efficient cultivation. Their apparent poverty was the staff upon which they relied in lieu of payment of their rent; and to preserve this appearance it was necessary that they should carefully avoid such things as a sufficient stock, or a good breed of cattle, improved

agricultural implements, or any outlay on their farm, either for ornament or utility. Their object was, with the least possible expense, to raise a scanty crop, which would prove that they were unable to pay the rent.

By this proceeding the landlord, the country, and even the tenant himself, were sufferers. The landlord had his land deteriorated by bad cultivation, and received less than its fair value, and far less than his nominal income. In many cases it did him a further injury, by enabling him to excuse to himself his own extravagance. He owes a good deal to his creditors, but his tenants owe a considerable sum to him; and in this manner, without going into details, he is able to present a rough balance of accounts to his conscience if it accuses him of exceeding his income.*

The country obviously suffers by anything that diminishes the produce of the soil. The tenant hides his money instead of employing it in reproductive works. The fund for the subsistence of the labourer disappears, and there is no profitable employment for the peasant and the artisan. A number of ill-paid labourers are employed to do badly a work which a few well-paid men could perform efficiently with proper capital and under skilful direction. Every man who observes the agriculture of England and Ireland, even with a careless eye, is struck by the contrast between the produce of the land and the number of men employed on it. To the Irish traveller in England it seems as if the work was done without hands. He sees the work finished, but nobody doing it. The Englishman wonders at the multitude of men whom he sees with agricultural implements in their hands, and nothing done to account for their appearance. It was often found that the land was most wretchedly cultivated in districts where labour in abundance could be had for sixpence a day, or even less. There is no profit to be made by employing ill-paid labourers. And without skill, and capital, and freedom, and security, the employer cannot afford to pay fair wages.

* This may appear fanciful and far-fetched; but it is certain that many do deceive themselves by comparing their expenditure with their nominal incomes. The observation is not new. "So when they have raised their rents they spend their fortunes by living up to a nominal rent-roll, which is frequently the reason we see so many families ruined and often extinct," &c. "Landlords would have a certain and well-paid rent, and would know exactly what they could depend upon. This would make them less lavish and extravagant than they are."—ARTHUR DOBBS, 1729.

It may be said that, even for a tenant owing more rent than he could pay, it would be on the whole more prudent to cultivate his land skilfully and carefully. This may be the case, but men are naturally disposed to indolence, and a slight argument will often turn the scale. A man is often not industrious even when he knows that the produce of his industry will be his own; how much less will his industry be when he has good reason to fear that another will seize the fruits?

This complaint of high rents has been made without ceasing for more than three hundred years. There was never less ground for it than at the present day, although in some instances the rent demanded is still too high; but this chiefly occurs where the landlords are middlemen, or where the property is very small.

Several circumstances concurred in former times to make the competition for land keener, and the demand for high rent more inconsiderate than now. One great difference between English and Irish law, the importance of which it is difficult to estimate, was that in Ireland there were no poor laws. The poorer tenant, of the class that in England would look to the parish for support, saw no resource in Ireland but to obtain on any terms possession of a sufficient quantity of land to produce as much potatoes as his family could consume, with, if possible, after the potatoes, on the following year, as much corn as with his pig would be sufficient to pay the rent. The general poverty and ignorance of the people increased the competition. There was not much difference among the people who applied for a vacant farm. No man had such capital or skill as to enable him to make a greater profit than his competitors, and the most obvious distinction was the willingness to offer the highest rent. For such tenants the landlord could not erect suitable buildings for residences or farm offices. The tenant, if he got them, would not keep them in repair.

The law gave some encouragement to this mode of dealing on the part of the landlord by the absence of poor laws, by the law of distress, which enabled the landlord to help himself without the expense of litigation with an insolvent tenant, and by the want practically of any law of limitations to affect the landlord's claims against his tenants. The law has been altered in this respect, although scarcely to a sufficient extent.

The imprudence of setting land at high rents to insolvent tenants was becoming apparent to many, and the events con-

nected with the famine of 1847 made it manifest to all. It is comparatively a rare thing now for a landlord to set land at a rent which he does not believe the tenant ought to be able to pay; and rents are now generally paid with reasonable punctuality. Notwithstanding the outrages that occur in some parts of the country, I believe there never was a time in which the occupying tenants owed so little rent.

It is still, however, not unusual to insert in leases many clauses and covenants which are inconvenient to the tenant and useless to the landlord. They are not observed; but they have the mischievous effect of giving the landlord too much power over his tenant. This is not peculiar to Ireland. I have seen copies of English leases which would make it very difficult for a tenant to manage his farm with profit, if he did everything which by the terms of his lease he was bound to do.

The allowance of half a year's rent in arrear, under the name of the running gale, is almost a settled institution in some parts of the country. This is so much the case, that a tenant who had not paid his landlord the rent that fell due on the 1st of November, would in the following month of March describe himself as owing no rent to his landlord, and in a year after he would describe himself as owing only a year's rent. He would not count the rent that fell due the preceding November.

This custom is mischievous, as leading to accumulation of arrears; it keeps the tenant in the landlord's power; it prevents the tenant from looking to his lease as the measure of his obligations. In this, as in other cases, the prospect of long credit induces him to offer too high a price.

The institution of a running gale often compels the landlord to plunge into debt, from which he never extricates himself. A man dies in December possessed of a good estate. The eldest son gets possession, subject to a jointure and portion. Thus he has a smaller income than his father had, while he is naturally disposed to live in the same style. He has also to be at some expense in buying furniture and other matters, when he takes possession of the family mansion. But all his difficulties are crowned by the running gale, which adds nearly six months to the period that intervenes before he receives any rent from his tenants. He receives very little before he is ten months in the possession of his estate; and in the meantime he often contracts inveterate habits of running into debt,

Arthur Young, in the interests of the tenantry, strongly recommended the enforcement of punctual payment of rent in his advice to Irish landlords. "The first object is a settled determination, never to be departed from, to let his farms only to the immediate occupiers of the land, and to avoid deceit; not to let a cottier, herdsman, or steward, have more than three or four acres on any of his farms. By no means to reject the little occupier of a few acres from being a tenant to himself, rather than annex his land to a larger spot. Having by this previous step eased these inferior tenantry of the burden of the intermediate man, let him give out, and steadily adhere to it, that he shall insist on the regular and punctual payment of his rent, but shall take no personal service whatever. The meanest occupier to have a lease, and none shorter than twenty-one years, which I am inclined also to think is long enough for his advantage. There will arise, in spite of his tenderness, a necessity of securing a regular payment of rent. I would advise him to distrain without favour or affection at a certain period of deficiency. This will appear harsh only upon a superficial consideration. The object is to establish the system; but it will fall before it is on its legs if it is founded on a landlord forgiving arrears or permitting them to increase." "Such a steady regular conduct would infallibly have its effect in animating all the tenantry on the estate to exert every nerve to be punctual; whereas favour shown now and then would make every one, the least inclined to remissness, hope for its exertion towards himself; and every partial good would be attended with a diffusive evil; exceptions, however, to be made for very great and unavoidable misfortunes, clearly and undoubtedly proved."

CHAPTER IV.

THE subletting and subdivision of farms are not necessarily connected with each other. A farm may be sublet without being divided. But they partly produce the same effects, and proceed from the same causes; and, in many cases, subletting leads to subdivision. The common cause is the poverty of the country. This, when there are long leases, leads to sub-

letting ; when the leases are short and unprofitable, it leads to a subdivision of farms.

When a man holds land at a rent less than the full value of the land, whether the lowness of the rent is caused by the liberality of the landlord, or by the improvements which the tenant has made on his farm, or by a general rise in the value of land through the country, he has a property which he may enjoy in person, or transfer to another. If his inclination or any other circumstance leads him to any pursuit except the occupation of that particular farm, he will endeavour to dispose of his lease to the best advantage. In the wealthy districts of the north of Ireland he will readily find a purchaser. There are many men anxious to get a farm, and possessed of money sufficient not only to cultivate the land, but also to pay a fair price for the interest of the selling tenant.

After this transaction, the new tenant now in occupation of the land has gained nothing by the liberality of the landlord, or the general rise in the value of land, or the improvements made by the tenant. Whatever the land (from any cause) is worth above the rent, he has paid for in the purchase-money which he has given to the preceding tenant. To him it is the same thing as if he had paid a fine to the landlord on getting possession of the farm. The sum thus paid depends more on the means of the purchaser than on a nice calculation of the value of the farm, or of the interest which the tenant has in it, although of course the greater the interest the greater will be the price paid for it.

There is nothing in a transaction of this kind injurious to any person. On the contrary, like the ordinary operations of free trade, it appears beneficial to all parties concerned. This is obvious with respect to the immediate parties to the bargain. It is a voluntary transaction, into which neither party would enter if he did not consider it to be for his benefit. The outgoing tenant prefers the money to the land, the incoming tenant prefers the land to the money. The country gains by the change, as the incoming tenant is probably a better farmer or possessed of more capital than his predecessor. The landlord is secured of his rent, and of the performance of the covenants in his leases. It is not likely that any man would pay a large sum for a farm, and then expose himself to ruin, or put himself in the landlord's power by neglecting to pay his rent, or by breaking the covenants in the lease.

In one case, however, the change is not always to the landlord's taste. If he conferred an obligation on the outgoing tenant by granting him a lease on liberal terms, he may not be pleased by the change which puts the farm into the hands of a person who is under no obligation to him. But this is a very slight matter. The sense of obligation is seldom very durable unless it is kept up by continual kindness, and such conduct on the part of the landlord would excite the same feeling in the new tenant.

But there are parts of Ireland, chiefly in the south and west, which are so poor, that a tenant who wished to dispose of a valuable interest in a farm might find it difficult, if not impossible, to procure a purchaser. Many people might wish to get his farm, but none have the money to pay for it. The outgoing tenant therefore sublets the land instead of selling it, and thus receives an annual profit rent instead of a gross sum in hand. The new tenant hopes to pay the profit rent out of the proceeds of the farm. He is in the same position with respect to annual payments as if he had borrowed money to buy the tenant's farm, paying as interest a sum equivalent to the profit rent. He could not, however, borrow the money because there are few who have any sum to lend, and because he has no security to offer. The middleman trusts him with the land, relying upon the extraordinary powers which the law gives the landlord for the recovery of his rent. It is probable that the under-tenant will engage to pay a very high rent, to compensate for the indifferent security which he offers to his immediate landlord.

In many cases this subletting was a profession or calling. The chief landlords thought it impossible, or at least very unpleasant, to collect rent from the very poor persons who were the occupying tenants of the country. They gave leases for their lives, or longer, and on reasonable terms as to rent, to men whom they considered good marks for the rent, and who sometimes promised that they would make some improvements in order to enable them to sublet at a profit. Thus subletting became very general, and there were large districts in which scarcely a single occupying tenant held directly from the owner of the fee.

This system was useful to nobody but the middleman. He had a good income with very little risk or trouble; and in the earlier part of this century, during the French revolutionary

war, and the depreciation of the currency caused by the suspension of cash payments by the Bank of England, rent of land rose so much that in many cases the middleman had as much profit from the land as the head landlord himself. Sometimes land rose so much in value, that the tenant of the middleman was able to sublet his farm at a profit, and thus to become a middleman himself.

The peasantry under this system were reduced to a wretched state. The traditions of liberality which belong to men who inherit large estates did not exist among men who took farms for the purpose of subletting them at the highest rent they could obtain. They were not expected to deal like gentlemen with their tenantry. They belonged nearly to the same class as the farmers, and made as hard a bargain in setting a farm as they would in selling a horse. They could scarcely afford to be liberal. If a gentleman whose estate is set for fifteen hundred a year makes a reduction of his rent at any time to the extent of twenty per cent., he loses one-fifth of his income; but if he was a middleman, paying a rent of twelve hundred a year, he could not make such a reduction without losing his entire income. The same principle extends to every case. Every act of liberality by the middleman would cost him a much larger proportion of his income. His trade was to extract as much as possible from the wretched occupiers of the land. The increase of population was so rapid, and the general poverty of the country was such, that men were found willing to engage to pay him anything that he demanded. The wages of labour were so low, and the difficulty of getting employment was so great, that it was better to get possession of land on any terms than to trust to casual employment for a subsistence.

The middleman, not having a permanent interest, did not care for the improvement or deterioration of the estate. A thought upon the subject never crossed his mind.

Two circumstances were of material assistance to the middlemen, and to those who acted like middlemen in their treatment of the tenantry. First, there were no poor laws. They were therefore enabled to cover the land with a starving population, without the possibility of being called upon by law to contribute anything to their support. Secondly, the law of distress was more severe than it is now, and enabled the landlord to distrain growing crops. At common law, the

crop, until it was severed from the soil, was part of the soil, and could not be seized by distress or execution; but this was altered by Act of Parliament, to enable the landlord to seize the crops before they were ripe, to put keepers in possession to watch them, and to carry them away when they were ripe, leaving the starving tenant and his family in possession of the naked land. Thus the landlord frequently thought it for his interest to encourage the subdivision of farms. I remember, many years ago, hearing an extensive land agent laying down the principle in a very authoritative manner, that it was better for the landlord that there should be as many occupiers as possible on the land, since the more occupiers, the more tillage was necessary to support the tenants, and the landlord was able to help himself to the produce of the soil before they got anything.

But although some landlords may have thought that subdivision was for their benefit, they could not long have retained that opinion of subletting. They soon saw that the middleman was no use to them, but was merely intercepting a portion of their natural income; and when the great fall of land took place after the year 1815, many middlemen were broken, and left the chief landlords to deal with the land itself or with the immediate occupiers. Many landlords resolved to grant renewals of leases to none but the tenants in actual occupation. Acts of Parliament were passed to prevent or discourage subletting, and the system of middlemen gradually died away. They exist now chiefly where the land is held under bishops' leases, or under leases for lives renewable for ever.

Although I have referred to the subletting Acts, I do not believe that they had much influence in preventing subletting. The law was always sufficient, if the landlords inserted covenants against subletting in their leases, and took a little trouble to enforce them. What really caused the change was that the landlords became alive to their interests on this point.

However mischievous the old custom of subletting may have been, it is guiltless of one charge that has been sometimes made against it. The landlord had a right to distrain for his rent, even when the land was in the hands of an under-tenant, who had paid his own rent to the middleman. It has been frequently stated as a grievance of no unusual occurrence, that owing to this state of the law, the tenant in occupation was obliged to pay his rent twice over, once to his own immediate

landlord, and again to the head landlord. I have seen this stated in tales written to illustrate the state of Ireland, and even in evidence given before commissioners to inquire into the state of Ireland. But the statement is untrue. Such statements could not obtain credence among any men who knew what the real grievance was under which the peasantry laboured from the middleman system. The real grievance was that the rent was so high as to reduce the tenant to indolent apathetic despair. His habitual state was one of hopeless insolvency, and the middleman secured him against being obliged to pay two rents, by charging him with one rent so high as to exceed his means of paying it.

The foundation of the charge is this: a man gets a farm for a long term at the moderate rent of £1 an acre; he sublets it to a farmer at the higher rent of £2 an acre, and, to save himself trouble, he accepts his profit rent of £1 from the tenant, and lets the tenant settle the balance with the head landlord. The tenant does not dislike this arrangement, as the head landlord is usually more indulgent than the middleman. He is apt, however, to describe himself as paying two rents (although he is in reality only paying one rent, divided between two persons), and to complain of it as a grievance that after he has paid his own landlord, another landlord should demand more from him.

The system of subletting, at once the cause and the effect of Irish poverty, has nearly disappeared, and the middleman by profession no longer exists. In general, the immediate landlord of the occupying tenant is either the actual lord of the fee, or he has an interest in the land equivalent for all practical purposes to that of a fee-simple proprietor.

The subdivision of farms arises from different causes; one cause is subletting. The middleman who sublets looks for the highest price which he can procure. The highest offers will be generally made by the poorest farmers or labourers. These generally would not have the means to cultivate more than a small patch of land, and they would not be a mark for the rent of even a middle-sized farm. In many cases the middleman held a farm in his own hands, and received a considerable part of the rent of the small holdings under him in labour, or in such agricultural produce as the cotter tenant could produce, and as his position as a farmer enabled him to consume or utilise. His account with his tenant would be

something of this kind : on the one side would be the rent, the per contra would be two shillings and fourpence cash, forty days' labour, seven days' work of a horse and cart, a young pig, two geese, five pair of chickens, six dozen of eggs, and two loads of turf. The accounts, however, were never settled ; receipts were neither given nor demanded ; the tenant knew that he owed more than he could pay, and he had very little curiosity to know the exact amount. But the race of middlemen has now nearly died away, and subdivision from this cause rarely takes place.

A more fertile cause of subdivision of land is the custom which prevailed among farmers of dividing their farms among their children. In this manner a farm belonging to a man with several children would be divided into five or six smaller farms ; and these in their turn might be further subdivided in the following generation. The landlord found it impossible to stop this proceeding. There were no formal acts which he could notice ; the children who were born on the land remained on it, and by mere verbal agreement each enjoyed some particular part instead of all enjoying the whole in common. Sometimes they remained for a time in the same house, and then the labour of a few days would erect a separate cabin, which might appear to be intended as a dwelling for a labourer, or as a pigsty, or as a residence for some offset of the family.

The chief causes of this custom were the absence of proper buildings on the land, and the ignorance and poverty of the farmers. The son who built a wretched cabin was as well lodged as he had been in his father's house ; he had never known anything better. As there were no farm buildings nor any capital on the chief farm, he did not want any for the plot assigned to him for his support. In fact, the want of capital and farm buildings made a small farm more convenient and more profitable than one of larger size. If the large farm had been supplied with a suitable dwelling-house and other buildings useful for the cultivation of the farm, it could not have been divided without inconvenience and probable loss.

Thus the condition of the country made this subdivision a matter of convenience ; but the poverty and ignorance of the people made it a matter of necessity and justice. The farmer possessed nothing but his farm, and, therefore, could not provide for a child in any manner except by giving him part of it. He and his children appeared not to know that any mode of

livelihood was open to them except the cultivation of the particular farm on which they had hitherto lived. In many cases they could only speak Irish, which put successful emigration out of the question.

Those causes of subdivision of farms are gradually losing their force. Many farms are so well provided with suitable dwelling-houses and convenient offices, that they could not be subdivided without considerable loss. Tenants have more money, and are able to push forward their children in various occupations. There are more sources of employment open to them, and their better education enables them to emigrate with success. The spread of education has been a great cause of the increase of emigration. A very small proportion of that increase has been caused by insecurity of tenure.

I do not believe that at present there is much tendency to an inconvenient subdivision of land in the greater part of Ireland; things may be safely left to find their own level, and under a system of freedom land will naturally fall into those parcels which will make it most productive and useful to the entire community. There are physical causes in the land itself which in some cases will produce small, and in others large farms.

CHAPTER V.

It has been supposed by many that a beneficial change might be produced in the condition of Ireland by creating and keeping up a large body of peasant proprietors—that is to say, of men holding small farms in fee-simple. I shall not enter into much discussion respecting the utility of such proprietors, because I believe it would be very difficult to create them, and impossible to keep them up in such a country as Ireland. Where they have long existed, they may continue for a little longer and be sustained by habits and feelings traditionary in the families. But such habits and feelings cannot be created by any law, and they are inconsistent with the mental activity of Irishmen. They are inconsistent with railways, penny postage, a cheap newspaper press, and national education.

Men will follow where their interests lead them, and in general *it is not for a man's interest to be a peasant proprietor!*

This may appear a paradox to some who would lay it down as incontrovertible truth that every peasant would desire to become a proprietor. I do not deny that, but I say that in general the proprietor would not wish to remain a peasant. Take, for example, the case of a man who is the owner in fee of thirty acres of land, worth thirty shillings an acre. The value of this, together with the capital necessary for its cultivation, and the furniture of his house, &c., cannot be less than fifteen hundred pounds, and it is not to be supposed that a man who has received a fair education, and has so much capital at his command, would consider his intellect and time and capital sufficiently employed in the cultivation of five small fields. A farmer with the same capital, and holding a hundred and fifty acres at a full rent would be much better off. He could live in greater comfort, give his children a better education, and leave them a larger provision at his decease. The small proprietor might improve his position by selling his land, and engaging in trade; or he might set his land, and enter into a profession, or some industrious calling with a salary, or he might emigrate and become the owner of five hundred acres of land instead of thirty, and have boundless prospects for his family instead of giving them the paltry provision of five or six acres each. In short, he can scarcely make a more unprofitable use of his estate than by occupying it himself as a peasant proprietor.

Of course, if you take a peasant of forty years of age, and make him suddenly a proprietor, although he may emigrate, he cannot readily betake himself to any other pursuit. But his sons will not remain on that farm. The latest agrarian crime that I saw mentioned in the newspapers was the murder of a man with a Celtic name. He was stated to have been the owner in fee of forty acres of land, which he set to four or five tenants, and went away to earn his bread elsewhere. He returned, having become entitled on his discharge from some public employment to a pension of about £14 a year. He took back some of the land from the tenants to reside on it himself, forgiving them a year and a half's rent in exchange. He was brutally murdered.

In the sales in the Landed Estates Court it may be observed as a matter of constant occurrence that a man with an estate that would be the size of a single small farm does

not hold it all in his own hands, but sets the greater part of it to several small tenants, not keeping more in his own hands than is necessary for the supply of his house.

The possession of a small fee-simple estate can have little tendency to prevent emigration. The price would furnish the means of a prosperous emigration. The owner of an estate of forty acres in Ireland may become the owner of several hundred acres in Australia or America.

In those countries where there are many very small hereditary estates, the inhabitants are ignorant, unambitious, selfish, frugal, and laborious. The whole concerns of the family are centred in one care—how to preserve the patrimonial field. With this view, only one son may marry, and the occupations of all are settled beforehand with this one object. The peasant proprietor has the virtues which the Irish farmer wants, and the vices from which the Irishman is free.

I should not expect much advantage from the sudden creation of peasant proprietors; but the law ought not to do anything to prevent their existence, as it now does by the law of primogeniture, the law of settlement, and every law that makes the transfer of land tedious, difficult, uncertain, or expensive.

The question of large and small farms is sometimes discussed as if it was intimately connected with the prosperity of Ireland. Some think that the country would be more prosperous if it was divided into large farms, held by men of capital, cultivating the land by means of well-paid labourers, assisted by the most approved machinery. They wish to assimilate the agriculture of Ireland to the manufactures of England. Others are for the division into small farms, where the farmer would be his own labourer and overseer.

A great deal may be said on both sides; but the nature of the land itself generally determines whether the farms should be large or small. Rich plains, well fitted for pasture, will be held in large tracts. Uneven, rocky, rough, light, arable land, will generally be divided into small farms.

The grazier, who buys and sells and fattens cattle for the market, requires far more skill than the village farmer. He has far more opportunities of gaining money by skill, or of losing it by ignorance. Hence the unskilful grazier breaks, the skilful enlarges his territory. This he may safely do, as it is not necessary for him, as it is for the tillage farmer, to watch

his labourers all day. He may even have several farms not adjacent to each other. The more extensive his operations are, the more opportunities he has of using, and even of improving, his skill in the selection, purchase, sale, and management of cattle. For these reasons there is a tendency for fattening pastures to be held in large tracts.

The case is different with rough tillage farms. The expense of locomotion and of carriage from one part of the farm to another, and the impossibility of adequate inspection if the farm is large, naturally lead to the creation of small farms.

The nature of the soil also determines to a great extent whether the land should be employed in pasturage or tillage. There is a rich stiff clay that is excellent for pasture, and while under pasture improves every year, but is not profitable for tillage, as it requires so much labour as to consume the value of the crop. Old pasture land, if broken up, takes a long time to recover its fattening qualities, although it will yield hay or be fit for dairy produce. On the other hand, there is a light soil which yields a fair crop without much expense of cultivation, and will not improve by being kept long in pasture, but has a tendency to run into unprofitable moss. This land is necessarily employed in tillage, and divided into small farms. If a farmer makes money, he cannot conveniently extend his operations, which are limited by the size of his farm. His success depends more upon thrift and industry than upon superior skill. The chief difference is that the good farmer is able to live in greater comfort than the bad one. Agricultural skill has not made such progress as to decide the contest between high and low farming. The one makes much, but the other spends little, and runs no risk.

I have given instances of land which must be held in large pasture farms, and of land which must be held in small tillage farms; but these shade into each other by imperceptible gradations, and there is much debatable ground, in which sometimes the one and sometimes the other system prevailed.

At present I think the system of pasture and large farms has a tendency to extend itself, for the following reasons:—

In the first place, the price of meat has risen, while the price of corn has not advanced. This is an addition to the grazier's profit.

In the second place, the wages of labour have risen in a greater degree than the efficiency of the labourer, and this, by increasing the expense, reduces the profits of tillage.

Thirdly, the invention of machines for threshing, reaping, and mowing enables the farmer on a large scale to perform those important operations with less expense and greater rapidity. It would be unprofitable to a small farmer to possess those machines, for which his farm could not furnish more than one or two days' work in the year. It is true that they may be hired, and, in fact, this is often done with threshing machines. But with mowing and reaping machines this is more difficult. The farmer cannot so readily make an appointment some time beforehand, irrespective of the weather; and when his crop is ready he cannot wait for the reaping machine without some loss. The land also must be properly prepared, or the machinery will suffer damage.

These circumstances throw some difficulty in the way of hiring reaping and mowing machines; but it is not impossible, and is sometimes done.

Another circumstance, which tends to keep up large farms when once they have been consolidated, is the larger capital now expended in the erection of farm-buildings. It is obvious that when a farm of 200 acres is supplied with a suitable dwelling, a barn, houses for cattle, and other offices, it cannot be divided into two farms without loss.

The best remedy against too great an extension of the large farm system, without an injurious interference with the free course of industry, is to be found in a good agricultural education for the poor. It is a sad sight to see a holding of four acres, of which only one is in a state of cultivation, and that often a cultivation of a wretched kind. The remaining three acres are taking a long rest, after having been over-cropped, and the entire is full of weeds. Meantime, the peasant is looking idly on, and between the time of planting his potatoes and digging them, spends only a few days' labour on his farm in earthing them.

His short or long tenure has nothing to do with the matter. The work which he neglects is precisely that work which would yield him an immediate return.

It is not always the sloth of the owner which is the cause of the wretched state of his little farm. He is often ready to work for any employer at very small wages. It has not been an uncommon thing for a man to look for work at sixpence a day when he might earn more than double that amount by working for himself on his own little farm.

Ignorance is the chief cause of his idleness and mismanagement. The peasant farmer knows only how to raise potatoes according to the routine of the slovenly farmers around him. While he imitates them, he is inferior to them, for he works with less capital and worse tools ; but he is unaware of the advantages which he might possess by deviating from their practice, and treating his little plot as a garden, not as a farm. He thus might find employment for himself and all his family, and treble the produce of his land when they spent that time in profitable work which they from ignorance often spend in worse than unprofitable idleness. To enable him to act thus he must be taught, for at present he has no opportunity of learning the cultivation of a garden farm by experience or observation of what is going on around him.

He has the advantages on his side that the personal expenses are inconsiderable. Being himself the labourer, he requires no steward or overseer, and he saves many of the expenses incident to a larger farm. Those advantages are lost as soon as he possesses more land than he can cultivate without a horse. It then ceases to be a garden farm.

The small farmer in Ireland has never sufficiently considered the necessity of keeping up the fertility of the land. Ireland has been mercilessly over-cropped. Notwithstanding the increase of pasture since 1848, the land has not yet recovered from the exhaustion caused by the over-tillage of a century.

Formerly the course of husbandry was of this kind :—1st. Potatoes, with manure. 2nd. Wheat. 3rd and successive years, Oats and barley until the land was so barren as to be incapable of yielding another corn crop. It was then permitted to rest in dirt and weeds until it got a green skin or sole, and then the same exhausting process recommences.

This was the case in Arthur Young's time, 1777. Thus he describes the courses of Newtown Stewart :—1. Oats on lay 2. Wheat. 3. Oats. 4. Barley. 5. Oats. 6. Barley. 7. Oats. 8. Left for lay. A few sow clover or rye-grass for two years.

His account of the courses of Courtown are—1. Potatoes. 2. Barley. 3. Oats ; then more crops of oats, or barley and oats, till the soil is exhausted, when they leave it to turf itself, which it will not do under ten or fifteen years. This system continued until the middle of this century on many estates in which the agents seemed to consider that their only duty was to collect the rents,

Even with careful management, it would not have been easy to preserve the fertility of the soil unimpaired when the chief exports were provisions, and no artificial manures were imported.

CHAPTER VI.

ULSTER TENANT-RIGHT.

THE phrase "tenant-right" is not unknown in England, and is sometimes found in wills and other legal documents. It signifies not merely the actual estate and right of the tenant, but also the good-will, and the expectation which the tenant has that he will be permitted to remain in possession of the land on reasonable terms. The phrase is used in many parts of Ireland besides Ulster; and in every part of Ireland, any tenant-at-will, under a liberal landlord, could obtain a good price for his interest in the land if he were permitted to sell it.

The peculiarity of the Ulster tenant-right is, that it has been reduced into a kind of system, with the consent or acquiescence of the landlords. It has several qualities which may be found separately elsewhere.

In the first place, when land is set for agricultural purposes, the rent demanded is not a competition rent; it is not the utmost rent which a good and solvent tenant would be willing to pay. If there is a permanent increase in the value of land, either from the general improvement of the country or from the increased price of agricultural produce, the landlord may raise the rent at his discretion in the same manner as any other landlord may raise the rent of his yearly tenants. It is, however, expected that this discretion will be guided by the same generous feeling which the landlord showed in the original letting.

Secondly, it is expected that as long as the tenant pays his rent, the landlord will not use his legal power of putting an end to the tenancy.

Thirdly, if a tenant finds it necessary or convenient to leave his farm, he may sell his tenant-right, with the approbation of his landlord. This approbation is not to be capriciously refused; but, on the other hand, the tenant is not at liberty to

select any substitute that he thinks proper, irrespective of his character and possession of sufficient means for the efficient cultivation of the land.

He is not always permitted even to accept the utmost that an eligible successor would be willing to pay for the tenant-right. The landlord has an obvious interest in preventing this price from being too high. Too high a price might deprive the incoming tenant of the means of doing justice to the farm. Moreover, it might impose a moral obligation on the landlord not to raise the rent so high as he might otherwise do without prejudice to the customary tenant-right allowed on his estate. Thus, suppose the customary value of the tenant-right on an estate has been £7 an acre, but since the last settlement fixing the rate of rent the country has improved, or the price of agricultural produce has risen, so that it would be reasonable in a short time to make a new agreement with the tenants respecting the rents. In this case, if an incoming tenant, with the consent of the landlord, paid for the tenant-right a price based on the calculation that the present amount of rent would not be altered for a considerable period, he would have a just cause of complaint if the landlord, by raising his rent, should disturb the arrangements, on the faith of which he had paid his money. If the selling tenant should say, Have not I a right to sell my interest for the highest price I can get? the landlord might reply, Have not I the same right? The selling tenant has no right to complain, if, when he sells his farm, he gets back the price which he originally paid, together with the value of all the improvements which he may have made in the meantime.

Fourthly, all arrears of rent must be paid before the transfer is completed. In a large and well-managed estate, the transaction proceeds in this manner:—John M'Garry holds a farm at the yearly rent of £30. He owes a year and a half's rent, and he wishes to sell his farm, in order to emigrate, or to set up a shop, or to pay his debts, or for any other purpose. Charles O'Neil agrees to give him £500 for it. He asks the agent's consent, which is granted. They call on the agent at his office; all arrears of rent are paid, probably out of the £500. An entry is made in the books, and the name of Charles O'Neil is entered as tenant in place of John M'Garry. The transaction is then complete, without any law expenses or any risk of bad title. It is true that as against the landlord it rests

upon his honour and upon public opinion ; but as against the rest of the world the title is perfect. No creditor, purchaser, mortgagee, or claimant under any former tenant can disturb the purchaser. A notice to quit by the landlord will protect him against every other claimant. It is no small advantage to be emancipated from all the complicated laws of landed property.

Thus in Ulster, free trade in land, as far as the right of occupation is concerned, prevails in the most perfect manner. Thus important property, to the value of several millions, may be bought and sold without risk, or trouble, or expense, in reference to the title or conveyance as readily as a horse or a cow. Find a person in possession willing to sell, agree upon the value, and pay the price, and the thing is done—the property is yours. It is true that this free trade affects only the permanent right of occupation, and does not extend to the absolute property in the soil ; but this is enough, for it is the industry and capital of the occupier that makes the land the source of wealth.

I have alluded to the entry in the agent's books where the estate is large ; but where the estate is small, and managed with less regularity, the same transaction is accomplished, without any formal entries in books, by a conversation with the landlord or his agent on the road, or at a fair, or market, or any place where the parties meet each other.

There are some advantages attending the Ulster tenant-right, independent of the free trade in land which it creates : under this system the tenantry cannot be very poor. However, it may be said that this result is attained, not by giving property to the tenant, but by preventing any poor man from becoming a tenant. You cannot become a farmer unless you have sufficient capital not only to cultivate the land, but also to buy at a high price the interest of the tenant who is already in occupation.

To the manager of an estate the system is very agreeable. The rents are moderate, and paid with punctuality, and the agent is not subjected to the harassing labour and danger which attend the enforcement of rent in many parts of Ireland. There are no evictions by process of law ; but if the tenant is not thriving, and finds it difficult to pay his rent, he is warned by the agent or by his own prudence that he ought to sell his tenant-right, and retire from his farm with a good sum in hand

to emigrate or support him in some other pursuit, before he is totally ruined by remaining in a farm that he is unable to cultivate with profit. He is succeeded by a wealthier or more skilful tenant, and the landlord and the country at large gain by the change.

Under the Ulster system, the landlord appears to receive a smaller rent than he might reasonably demand, but I doubt if he is injured by it. He is less apt to live beyond his real income. His rent-roll does not present him with an extravagant view of his means. Owing to the quietness and industry of the people, the value of land improves rapidly. It is better to receive two-thirds of the value of an estate worth £6,000 a year than the entire value of an estate worth only £3,000, and this is often the difference between an Ulster landlord and a landlord in those parts of Ireland where the system does not prevail. It is doubtful whether an Ulster landlord does not receive as much rent as a Connaught landlord would receive for an estate of the same natural productive powers.

But the system is not without its disadvantages. The tenant is too dependent on his landlord for the property for which he has paid the full value. Not only are his rights against the landlord not recognised by law, but even while dependent upon usage and honour, they are incapable of being exactly defined. The important question, what ought to be the proportion between the value of the tenant's and the landlord's interest, is not ascertained. It varies on different estates according to the wealth and liberality of the landlord, and even on the same estate it is liable to fluctuation.

When the value of land remains stationary, the matter is easily settled by letting the rent remain as it is; but when an improvement takes place gradually, a difficulty arises. It is not easy for some time to determine whether the change is temporary or is likely to be permanent. Every small increase in value, even if it is likely to be permanent, cannot be met by an immediate increase of rent. To make frequent although small additions to the rent would be a very unpopular course for the landlord to take. It would lead to frequent disputes, while it would alarm the tenantry, and diminish their confidence in the tenant-right.

Thus, while an increase in the value of land is always gradual, and scarcely seen while it is going on, a rise in rent is a sharp change, and is immediately and unpleasantly felt.

Take the case of a farmer who holds eighty acres at a rent of £120 a year. The fair marketable value of the land is £1 17s. an acre, so that he has a profit of seven shillings an acre in addition to the ordinary profits of his capital. For this tenant-right he could readily get a price of £7 an acre, £560 or more, if the people in the neighbourhood are prospering either in trade or agriculture. The country is improving, so that each year on an average adds threepence an acre to the value of the land. This goes on for twelve years, when the landlord thinks it right to make a new settlement of the rent, by adding three shillings an acre, leaving the customary seven shillings an acre tenant-right. The tenant will certainly complain loudly. He will see that this increase of rent makes him worse off than he has been for several years past, and that nothing has occurred during the last three or four years to justify such an addition to his rent. He cannot remember accurately what was the general value of land twelve years ago, while he has a very precise recollection of any improvements which he himself may have made in the meantime, and to such improvements, whether real or imaginary, he will attribute the increase of rent that has been imposed on him. He will complain all the more loudly, and feel a deeper sense of injury, because the justice of his complaint cannot be legally investigated. The legal power of the landlord to increase the rent is altogether independent of the circumstances by which his conduct may be justified.

Thus, whether by a gradual process or by starts at long intervals, the landlord finds it equally unpopular and disagreeable to increase the rents in proportion to the improvements, and in this manner the tenant-right on large and liberally managed estates has a constant tendency to increase in value. I believe it never was more valuable than it is now.

The right which the landlord has on the sale of a tenant-right, to object to the purchaser or the price, is very rarely exercised. The ability to pay the purchase-money may be taken as a fair proof that the incoming tenant will be able to cultivate the land and meet his engagements. As to the price, when the rent is all paid up, the incoming and outgoing tenant may make what bargain they like without the knowledge of the landlord, so that there is seldom an opportunity of objecting on this score.

So far everything seems to be in favour of the tenant. But

if the value of land falls, the loss falls entirely upon him ; and when the great depreciation of land took place in 1848, the state of parts of the counties of Armagh and Monahan was nearly as bad as in King's County or Tipperary. To those who wanted to part with their farms, the tenant-right was valueless, as there were no purchasers. The tenants were unable to sell what they had bought at a very high price. They expected that good times would return if they could hold out for a short time, and were inclined, in defiance of the law, to resist every attempt to deprive them of their holdings, or to make them pay their rents.

The value of the tenant-right on an estate is not subject to any fixed principle. It does not depend on any improvements made by the tenant. If the landlord is a just man, he will, in all his dealings with the tenant, value the land as if those improvements had never been made. But beyond those improvements, and even in cases where it cannot be pretended that any improvement was made, the tenant-right exists, and is often bought and sold for large sums of money. The price is often so high that the interest of the purchase-money, together with the rent, is much more than the fair value of the land.

It seems essential to the existence of tenant-right that land should be owned in large masses by the landlords. The owner of an estate of £20,000 a year may act with great liberality, and set the land for less than it is really worth. But if the same estate was divided among forty men, each with £500 a year, it is not likely that they would all act so liberally without any regard to the ordinary commercial principle of getting as much as they reasonably could. There would be a chance that some at least among the number would take every opportunity of making small but frequent additions to the rent, so small that the tenant would not on any one occasion feel it worth his while to make a desperate resistance, but so frequent that the value of the tenant-right would gradually dwindle away.

It is sometimes asked, Would the tenants prefer leases to their present position as yearly tenants? This, of course, must depend upon the length of the lease. A very long lease would undoubtedly improve their position. A short lease might have a contrary effect by leading to an earlier readjustment of the terms of their tenures. They would sometimes

hope that the present system might operate as an adjournment *sine die* of this readjustment. Time passes away, and it appears as far off as ever, as there is no reason why it should be required in one year rather than another. But if a lease was made, the time would be growing shorter every day. On the whole, however, I believe that most of the tenants would gladly accept a lease for thirty-one years at some increase of rent, rather than remain in their present somewhat dependent and precarious position.

It is not to be supposed that this system prevails universally through Ulster, or that any man could make a map to include only the parts in which it prevails. It is more usual to grant leases in towns, and in the neighbourhood of towns. There are also many scattered estates on which leases are granted, and there the leases are often sold, or the land sublet as in other parts of the country.

But although there would be no difficulty in the way to prevent the introduction of leases into Ulster, it would not be found so easy to introduce the Ulster system of tenant-right into other parts of Ireland. It is too vague to be capable of exact definition, or of being enforced by law. It depends upon confidence on one side, and honour on the other—upon a mutual understanding and public opinion—and these feelings cannot be created by law or agreement; they can only grow up gradually and slowly.

No one would wish to break up a system as long as it is supposed to work well, and when no complaints are made by the persons affected by it. But even if it were possible, I should not wish to see it extended to the whole of Ireland. The tenant is dependent on the liberality of his landlord to a degree inconsistent with a democratic constitution. A landlord who would not venture altogether to destroy the tenant-right has still the power to make a very great reduction in its value. The tenant holds a valuable property at the mercy of another who has an interest in taking it from him.

Another evil of the system is, that no man can take a farm unless he has double the capital that would otherwise have been necessary. The purchase of the tenant-right takes as much capital as the stocking of the farm. Thus a barrier is placed against the acquisition of a farm by a poor man. The advantage of the landlord and tenant system, as distinguished from the proprietary system, is that it enables the farmer to

apply his capital more efficiently to the cultivation of the soil, when the land itself is only paid for while he is using it. For the use of the land, the tenant pays a rent that would only be a moderate interest on the sum necessary to buy it. In Ulster, the saving in the amount of rent gives the tenant a very low interest on the sum that he is required to pay for the tenant-right. A man with skill and energy and a moderate capital would scarcely think it prudent to set up as a farmer in Ulster.

The wealth obtained by the cultivation and manufacture of flax in Ulster is the cause that when a farm is to be sold there is always at hand some person able and willing to pay for the tenant-right. In the other provinces the case would be different. None of the neighbours would have money to buy the tenant-right, and the purchaser would be obliged to borrow the purchase-money at a high rate of interest, as the security for payment would be of an inferior character. We should therefore look for some source of improvement in Munster and Connaught, other than the introduction of Ulster tenant-right.

Something, however, like the Ulster tenant-right in all its useful characters, but without its vagueness and uncertainty, might be created by an agreement or a law to the following effect:—Landlord demises land to tenant on the following terms—Tenant shall hold as yearly tenant at the rent of £40, payable on the 1st of May and 1st of November, and subject to the covenants in the lease contained for the proper cultivation of the land. Landlord shall not be at liberty to evict the tenant for any cause except breach of covenant or non-payment of rent. On the first eviction for any breach, the tenant shall be entitled to redeem within three months on payment of damages, to be settled by the court. The tenant-right shall be considered as of the value of seven years' purchase. The landlord shall be at liberty to raise the rent by giving notice one year at least before the 1st of November. If the tenant is not satisfied to pay such increase of rent, he may at any time before the 1st of March give notice to the landlord that he will surrender his holding on the 1st of November next, upon which the landlord must pay him seven years of such increased rent as compensation for his tenant-right. If the tenant considers his rent to be too high, he may, one year before the 1st of November, serve notice on his landlord to have it reduced to such rent as he may choose to name. In this case the landlord,

at any time before the 1st of March, may serve notice on the tenant that he will not consent to the reduction, and will take up the land and pay him seven years' value of such reduced rent, and upon tender of this sum on the 1st of November, the tenancy shall be at an end. The money is not to be paid until the land is given up. In all cases of eviction the tenant shall be entitled to seven years' rent from the landlord, deducting therefrom all money due for arrears of rent or breach of covenant. The tenant shall not be permitted to divide or sublet his farm, but he may sell his tenant-right, with the consent of the landlord, on giving two months' notice. If the landlord refuses to give his consent, he must purchase the tenant-right himself, paying seven years' purchase, but deducting all money due for arrears of rent or breaches of covenant. The tenant shall not be permitted to charge or incumber his holding. Every contract or engagement that he makes shall be considered as a merely personal contract, binding himself, but not affecting the land until the landlord shall have given his consent.

If the tenant finds it necessary to make any improvement on his farm, he shall serve notice on the landlord, specifying the improvement and the estimated expense. If the landlord objects, the tenant may refer it to the Land Tribunal to determine whether the objection is reasonable. If the landlord does not object, or if the Land Tribunal decides that the objection is not reasonable, the tenant may proceed with the improvement, and when it is completed the tenant shall be entitled to compensation in the following manner:—He shall receive for the term of forty years an annuity at the rate of £7 10s. per cent., payable half-yearly. As long as he remains in possession, his enjoyment of the land shall be deemed a payment of the annuity. If he sells his tenant-right, the purchaser shall be entitled to the residue of the annuity on the same terms. If the landlord shall increase his rent with the consent of the tenant, the latter shall be entitled to deduct the annuity, during his term, from the increased rent. If the tenant objects to the increase of rent, the landlord shall pay, as compensation for the tenant-right, seven years of the increased rent, plus the estimated value of the residue of the annuity, minus seven years of the annuity, or, at the option of the tenant, shall pay seven years of the increased rent.

To prevent frequent alterations of the rent, it might be

provided that no increase shall be less than ten per cent. on the rent, and that no increase shall be made at a shorter interval than seven years from the last increase. The above may be called the parliamentary tenant-right, which every landlord should have power to grant, notwithstanding any incumbrance or settlement affecting his estate.

CHAPTER VII.

A FEELING almost universal prevails in Ireland that the relation between landlord and tenant is not in a satisfactory condition, and that some concessions are required from landlords, and it is thought by many that such concessions might be made without detriment to their real interests.

I shall mention some of the chief complaints, and shall endeavour to draw a distinction between those complaints which appear to have some foundation in real grievances, and those claims which arise from a greedy desire to obtain by political changes that wealth which ought to be the reward of thrift and industry.

The first complaint is, that landlords are frequently prevented by settlements from granting beneficial leases, or entering into reasonable agreements with their tenants. If a farmer obtains a beneficial lease or a fair agreement, and expends money upon the faith of such lease or agreement, he is liable to utter ruin. The landlord's successor, often his eldest son, may evict him without compensation, relying upon some settlement of which the tenant never could have suspected the existence.

The second grievance is, that the tenant gets possession of a farm in such a condition that he cannot cultivate it efficiently, or dwell on it with decency, without making a large outlay on buildings or other permanent improvements. But when he has made those necessary improvements, he is liable to be dispossessed before he has enjoyed the farm long enough to obtain a fair remuneration for his risk and outlay. He loses the money which he expended in the reasonable belief that the landlord who permitted the expenditure would also permit him to reap the benefit of it.

The third grievance is, that a tenant often purchases the interest of a tenant from year to year with the express or implied sanction of the landlord. Sometimes part of the purchase-money is paid to the landlord in discharge of arrears of rent due by the outgoing tenant. Notwithstanding this, the tenant who paid the money is liable to be dispossessed by the landlord who received it. The landlord must have known that the tenant paid the money in the belief that he would be permitted to enjoy the land for a reasonable period.

In those three cases the tenant has expended money, or money's worth, on the faith of a contract, expressed or implied, that he should be permitted to enjoy the fruits of his expenditure. These three grievances could be completely remedied without any revolutionary changes. The first grievance would cease to exist if every limited owner was empowered to grant a lease for a term of forty-one years, at a rent not less than three-fourths of the value. This would completely protect the tenant-farmer; and if any man seeks to obtain a greater interest in land, there is nothing unreasonable in requiring him to investigate the title like any other prudent purchaser. A line must be drawn somewhere to distinguish the tenant from the purchaser.

The two latter grievances might be remedied by an enactment that any tenant from year to year who has purchased the interest of an out-going tenant, or any tenant who has improved his farm with the consent of the landlord expressed or implied, may apply for a recognition of his legal tenant-right. If the landlord refuses this recognition, an arbitrator appointed by Government should have authority to investigate the case, and determine whether the tenant has made out his claim for tenant-right. If the claim is established, the arbitrator should in his award set forth what improvements, if any, the tenant has made, and the date and value of those improvements. Until those improvements are exhausted, the tenant should be entitled to enjoy them without paying any increased rent on their account; and if he is obliged to leave the farm in the meantime, he should receive a fair compensation, in addition to the value of his tenant-right, for his improvements.

But the claims made by many on behalf of the tenants go far beyond the cases that I have mentioned. They claim rents determined by arbitration, not by contract; and fixity of tenure, irrespective of any custom of tenant-right, or money

paid to an outgoing tenant, or any improvement made upon the land. They claim in effect that a man who has taken a lease of a farm for twenty-one years, at a rent of £50 a year, shall have it changed to a lease for ever at a rent of £25, although every farmer in the neighbourhood may be willing to pay £50 rent for the farm.

It is scarcely necessary to use argument to prove the injustice of a claim which is made in contradiction to an express contract. If the contract is unequal or unjust, the utmost that can be demanded by the complaining party is, that it should be rescinded. But except in the claims made on behalf of Irish tenants, it was never known that a man who had made a contract beneficial to himself, the benefit of which he could sell at a considerable profit, and which he would be exceedingly unwilling to rescind, should set up a public cry to have that contract altered. What would be thought of such a case as this?—A man sells for £100 a horse, for which, if he set it up to auction, he could probably get £130. The following conversation takes place the next day between the buyer and the seller. Buyer: "You have charged me too much for that horse." Seller: "I am sorry you think so. However, I am ready to take it off your hands, and to return the price, or I can find a person who will pay you twenty pounds to stand in your shoes." Buyer: "I thank you; but that will not suit me. I am determined to keep the horse, and the price must be left to arbitration; and if I am satisfied with the price which the arbitrators award, I shall pay it, otherwise not." But such a conversation would not give an adequate idea of the claims of the Irish tenant. He demands not only to pay less, but to get more than he contracted for. His bargain is to get the land for twenty-one years, and his claim is to hold it for ever, although he has not a shadow of right to the land, except under that contract. I am confining myself to the case where the tenant has no claim, except that he is a tenant; for if he has any other ground for his demand, it ought to be fairly and liberally considered.

It is not difficult to prove that a law establishing fixity of tenure would be as impolitic as it would be unjust. It would utterly fail in its professed object. It would be a mere violent and wrongful transfer of property from a certain number of individuals who are now called landlords to another set of individuals who are now called tenants, and who would then

become landlords. The men now in possession would be enabled to violate their engagements, but no future tenants would gain anything by the change. It may be taken as an undoubted axiom in political economy, that if a man is permitted to sell or retain his own property, and to select the purchaser, he cannot be prevented from getting the utmost price that another person will be ready to pay for it. The only test of value is the price which the public is willing to pay.

Apply this axiom to the case of land. Suppose fixity of tenure and the settlement of rents by a Government arbitrator to be the established law of the land. I am in possession as owner in fee-simple of a farm of one hundred acres, worth two pounds an acre. A farmer would be willing to pay that rent, hoping to get a fair return for his capital and labour according to the ordinary rate of agricultural profit. If I set it to a tenant, he will have the rent settled by an arbitrator, who will probably award a rent of £100 a year as the fair value. But I may set it to a trustee, who then becomes entitled to the land for ever at the fee-farm rent of £100 a year. He sets up the tenant-right for sale, which will sell for between two or three thousand pounds. The purchaser will probably be obliged to raise the greatest part of this by mortgage. In the end it will be found that between rent and interest the new tenant will have to pay more than £200 a year, the rent at which he could have obtained it if the law had permitted me to set it to him at that rent. Moreover, he will have paid away a large portion of his capital, which would have been more profitably employed in the cultivation of the land.

The tenant will lie under another disadvantage, in being obliged to deal with two persons, from neither of whom can he expect any forbearance, instead of a single landlord, from whom he might get some assistance or abatement in a bad season. He cannot ask an abatement from the landlord to whom he is paying only half the value of the land as rent. He need not expect any reduction of interest from the mortgagee, for a money-lender is more apt to increase than to reduce the rate of interest in a season of hardship and scarcity.

The only mode in which any person could get a farm would be by paying a high price for the interest of some farmer who might be willing to sell his tenant-right. The price would generally be as much as three times the capital that would be sufficient to till the land. A great obstacle would be opposed

to agricultural improvement by this impediment to free trade in land. No man could become a farmer unless he had much more capital than would otherwise be found necessary; for he would not be able to borrow the entire sum necessary to purchase the tenant-right; and without purchasing a tenant-right, he could not obtain a farm. It is not to be supposed that the present tenants, when they had obtained a permanent title to the land, would part with their farms on the basis of the valuation on which they had obtained them. They would certainly require the highest price that could be obtained by free competition.

Thus, after the first confiscation of the landlord's estates, the law of valuation would become a dead letter. It would not be used to regulate future contracts, as men would find a way of settling the terms of their own contracts by mutual agreement.

As to fixity of tenure, it would soon be found intolerable, and would be repealed as soon as it had done its work of depriving the present owners of their estates. The public would not long bear a law which prevented two men from making a bargain just in itself, useful to the public, and profitable to both parties. I held some land in fee. I am too old and infirm to cultivate it. In a few years my son will be old enough to undertake the management of it. I wish to set it for a term of seven years; and, on account of the shortness of the lease, to accept a lower rent than if I were granting a longer term. This exactly suits my neighbour, to whom a moderate rent is a greater object than a long lease; but the law of fixity of tenure would step in, and say that I must either hold on my land at a loss, or part with the possession for ever, and that he must either do without a farm, or pay a sum for a fee-farm tenure beyond what he could afford. The result would probably be, that he would be obliged to remain idle for want of a farm, and that my farm would remain nearly unprofitable for want of a tenant, and the wealth of the country would be proportionally diminished.

In general there is no mode of getting land so convenient to a good farmer with a competent capital as getting his land for a moderate term at a rent settled by mutual agreement. The term should not be too long, as the landlord would naturally and reasonably require a higher rent. A belief prevails very generally that land has a tendency to rise in value, irrespective

of any improvements made upon it, or that money will fall in value, so that in the next century land will be worth a higher rent. The advantage of that rise will belong to the person who will then have the disposition of the land. This at present belongs to the owner in fee-simple in possession, and if he is asked to part with it, he will require an increase of rent, or some present payment as an equivalent. This would be inconvenient to the tenant, who expects to make ten per cent. compound interest on his capital. To him it would be a loss to expend any of this profitable capital in the purchase of an expectation to be realised at the end of a century.

It is not material whether this belief in the probability of a rise in the value of land be well founded or not, it is sufficient that it exists and must have its influence upon all contracts. It certainly cannot be disproved, and it has the experience of several centuries to support it.

I have assumed that fixity of tenure is to be founded on a valuation, because I see no other mode in which it can be established. If the landlord and tenant can fix the rent by agreement, there would be danger that the land would be set in many instances at far more than its real value, with an understanding (not supported by any promise, and not capable of being enforced by law) that the entire rent would never be demanded. This, as far as the public is concerned, is the worst tenure by which a tenant can hold his land. If the fixity of tenure is to be on the existing rents, it in many cases would be unjust to liberal landlords who often set their lands at less than the fair value ; and also in the case of land held by leases still unexpired and made in the last century or earlier ; while to the harsh landlord, who sets his land for the highest rent that is offered, it would be no injury, but it would be no boon to his tenantry.

But the settlement of rent by valuation appears just only to persons who do not know what a valuation of land is, and always must be. The value certainly is that rent which a solvent tenant will be ready to offer for the farm on a lease of moderate duration. When a landlord wishes to set his land, the proposals made by persons willing to become tenants settle the value of the land beyond the possibility of dispute. The solvent tenant will take care not to offer a rent which the profits of the land will not enable him to pay. He is under the strongest inducements to discover the real value of the

land. He may consult an experienced valuator if he thinks proper ; but he rarely takes this step, as he generally knows the value of the land better than any one whom he could consult. He often talks the matter over with his friends, to know their opinions, and then to form his own judgment. The professional valuator forms a more rapid judgment ; and unless he is living in the immediate neighbourhood of the land, his judgment is not worth much. A serious difference of value between two fields is often caused by circumstances which the most careful examination would fail to detect.

This tenant does not merely look to the soil, and to the condition of the roads, the fences, and the buildings : he knows what treatment the land has received for several years—the nature and quality of the crops—whether cattle appeared to thrive well on the land—what rent was usually paid for that and other similar land in the neighbourhood—and whether the tenants who paid such rents were prosperous or the reverse. Many other inquiries, which I need not enumerate, he makes before he determines what rent he will bind himself to pay.

When men are competent to make their own bargain, it is unjust to compel them to submit to the opinion of a third person.

In the year 1865, I made the following observations, and I have seen no reason to alter my opinion since I made them :—
“Many other things are to be considered, but I have said enough to show how utterly inadequate to the occasion is the cursory inspection that is made by a professional valuator. All that he often does is to find out what is the rent actually paid for the adjacent farms, and whether the farm he is valuing is better or worse than those ; and then to make an abatement or increase on the result so obtained, according to the purpose for which the valuation was made. If the valuation is made for the purpose of taxation, it is generally made low, for then there is less likelihood of an appeal. If the owner gets it valued for the purpose of a sale, the valuation is apt to be high—as more likely to suit the interests or wishes or feelings of the employer.

“The following cases are fair specimens of the discrepancies which are to be found in different valuations made of the same property.”

“Since I wrote the above, the estate of John Campbell Jones was offered for sale ; and the following are the differences

between the valuations made by a civil engineer and by the Ordnance valuation of the same lots :—

Killiewingan.

	£	s.	d.
Engineer	120	0	0
Tenement valuation	57	0	0

No. 5.

Valuator	8	10	0
Tenement valuation	2	5	0

Ratheline.

Valuator	29	17	7
Tenement valuation	8	0	0

Fox and Calf Island.

Valuator	40	0	0
Tenement valuation	3	0	0

Lot 9.

Valuator	10	0	0
Tenement valuation	1	6	0

Lot 10.

Valuator	8	4	3
Tenement valuation	1	4	0

“In the estate of Rutledge the following are two of the valuations:—

Cregganrae.

Valuator	53	1	7
Tenement valuation	17	10	0

Ballykit.

Valuator	226	13	7
Tenement valuation	131	12	0.

I have given those examples, not as the most remarkable that could be found, but because they were the most striking cases that came before me within a few days after I had made

the above remarks. I believe that, in those cases, both the valuations which I have contrasted were intended to be fair, and were made by skilful valuers.

It may be asked, "Is there no mode of valuing a farm? must the tenant make a mere guess at what he is to offer?" No; the landlord and the intending tenant have means of knowing the value of the land which no other person is likely to possess and to employ. They both know the past history of the farm, and of all the farms in the neighbourhood; what rent was paid for them; in what manner they were cultivated; and whether the tenants appeared to thrive on them, or the contrary. No man has such an interest in discovering the exact value as the person who proposes to become a tenant, and as his object is to make a profit by his occupation as farmer, it is not to be supposed that he will give more for the land than he can pay, reserving a reasonable profit to himself.

The injustice of setting aside a voluntary contract, and substituting a valuation, is not manifest at first sight, for the words appear fair. Why, it is said, should any tenant be required to pay more than the fair value for his farm? But every one who has any experience knows that nothing can be more uncertain and undetermined than the valuation of land. It is not uncommon to see two valuers differing enormously in their estimates, and yet neither suffering in reputation as if he had made a discreditable mistake. It is probable the value as fixed by any tenant-right measure would be less than half the rent which a solvent tenant would be willing to pay.

All future valuations would be still more uncertain; for as soon as the possession of land ceased to be a subject of contract by mutual agreement, the valuers would have no average market-value to refer to, and would form their estimates on the wildest principles.* This, however, would not be a matter of much importance, as I have shown that between rent and purchase of tenant-right every new tenant will be obliged to pay the full value of the land, no matter what changes may be made in the law.

In the form of tenant-right which I have ventured to suggest as possible to be introduced and maintained in Ireland,

* It is highly probable that, in the excited state of feeling that would be raised by an alteration of the law, no valuer would venture to express an opinion of the value of the land that was not in accordance with the tenant's wishes.

I have therefore taken care that it should be self-working, and not depend upon any valuation of the land to be made by any third person.

Some reason should be given for making land an exception to the ordinary rules of commerce, and fixing the price by law, instead of letting it be arranged by mutual agreement between the buyer and the seller, the landlord and the tenant. The reason formerly assigned was, that the possession of land was a question of life or death to the tenant; that he had no other resource to preserve himself and his family from starvation, and that therefore he was obliged to submit to any terms which an avaricious landlord might impose. That the parties to the contract stood on such unequal ground as to make it necessary for the law to interfere to protect the weaker party. It could not be pretended that this argument was ever applicable except to the case of small pauper tenants, and now the introduction of poor-laws, and the increased demand for labour, put it out of any man's power to say that he is obliged to offer an exorbitant rent for a farm in order to save himself from destitution.

The argument never had any bearing on the case of those tenants who hold the greatest part of Ireland, who have capitals of two or three hundred pounds and upwards, and who are farmers, not from necessity, but from choice, because they find the occupation of a farmer more profitable or more suitable to their taste or education than any other employment. On the profits to be expected from their industry and capital it may be necessary to make this remark. It is often said that agriculture is the most honourable, the most healthy, and the most delightful of all occupations. If this be the case, it follows from an elementary law of political economy that it must also be the least profitable. It will require greater profits to induce men to enter into any business that is less wholesome, less creditable, or less agreeable.

It should ever be remembered that it is a dishonest act for a man to make a contract which he does not believe that he can fulfil. The man who has obtained possession of a farm by promising a rent which he cannot afford to pay has committed a dishonest act. He has done wrong to the landlord, from whom he has obtained possession of the land on false pretences, and he has done wrong to the competitors for the farm whom he has outbid, and he has no just claim to have a law made to

reduce his rent, and give him an advantage over his more honest competitors.

I should not have thought it necessary to point out the unreasonable injustice of the claim made for fixity of tenure on a rent to be settled by valuers, were it not for the mischief that is caused by the expectation of the measure. It not only diverts attention from more practicable means of improving the condition of the people, but it increases the desire (already too strong) to obtain, and to retain, possession of land, no matter how incapable the possessor may be of cultivating the property. There is a hope that the interest, which is now worth little or nothing, will be converted by law into a valuable estate. This hope vanishes if possession is transferred to another. The eviction from a farm is felt not as a loss of the interest which the tenant had, but as a loss of the interest which he hoped to acquire by a change in the law. In many cases a failing farmer, who could dispose of his farm for a sum that would enable him to emigrate or to set up himself or his family in some profitable business, is tempted to hold on to his farm by the belief that the approaching law of tenant-right will give him an interest that he can dispose of for a much larger sum.

In some districts the agitation on the subject has fixed it like an axiom not to be controverted in the peasant's mind, that the possession of land, on whatever terms it is acquired, is a property which it is unjust to take from him without paying him large compensation. The relation between landlord and tenant is made the constant subject of violent declamation. His imaginary rights are assumed as if they were too clear for argument; and indeed this is necessary, for they will not bear argument.

A landlord has twenty acres of land in his possession. A peasant offers him twenty pounds a year for the land. His offer is accepted. He is put into possession of the land, but neglects to pay the rent, and finally he is evicted, owing perhaps three years' arrears of rent, which he never pays. He is considered an injured man, the victim of landlord oppression. No questions are asked about the merits of the case. The mere fact that he has been deprived of his farm is sufficient to excite the sympathies of the population, who will assist him to take revenge, or to escape, after he has gratified his revenge by murdering the tenant who succeeds, or his landlord, or his agent, or any member of any of their families.

Others will take the part of justifying the murderer, or blackening the character of the deceased. They will go through the form of saying that it is not right to commit murder, but they will exaggerate the provocation which the murderer received; they will rake up charges true or false against the deceased, and will at the same time classify as murders of greater enormity many acts of oppression never perpetrated, but which the populace will readily credit.

In many cases the landlord is deterred from enforcing his rights; and it is sometimes argued that it is therefore no injustice to deprive him of them by law. The landlord, it is said, will suffer no substantial injury by being deprived of a right which he can never venture to enforce.

This is like putting a price upon the landlord's head. It is to announce that everything will be conceded to the tenants, provided they will shoot so many landlords as may keep them for some time in subjection to the Whiteboy code.

Success acquired by such means would not produce the expected fruits. Riches acquired by fraud and outrage are not long enjoyed, for the qualities by which they are acquired are inconsistent with the qualities which are necessary to retain them.

Anything that would retard the advance of the country in civilisation, and still more, anything that would make it go back, would do an injury to the tenant far beyond the value of anything that he could gain by an alteration in the conditions of his tenure. The fee-simple proprietor of a hundred acres of land two centuries ago was not so well clothed, so well lodged, so well taught, or so well fed, as the tenant of the same lands who at the present time pays a fair rent for his farm.

This change is chiefly caused by the greater civilisation of Ireland. A very small part is caused by any improvements placed upon the land by the tenants. Not more than ten per cent. of the present value of the land is owing to such improvements.

The general question, How much of the improvements made in the country is due to tenants, and how much to landlords, or to possessors, whose tenure is substantially equivalent to a fee? appears to be immaterial. When once the tenant has received possession, his equitable rights depend upon the contract which he has made, and upon the condition of the land when he obtained possession. It is no concern of his how

that condition was caused. It may have been improved by the landlord, or by a previous tenant, who may have received compensation from the landlord ; or the previous tenant may have wasted the land, or have run away, owing large arrears of rent, or have had his lease unjustly broken without compensation for his improvements. With all this the new tenant has nothing to do ; he does not inherit the claims or the liabilities of his predecessors.

On the whole, it would appear that the tenants would have no just cause of complaint if—1st, Such leasing powers should be given to all landlords that no fair lease should be broken ; 2ndly, That when a tenant by lease has improved his farm, he should be entitled to a fair compensation ; 3rdly, That when a yearly tenant has improved his farm, or purchased the interest of an out-going tenant, he should be entitled to the seven years' purchase tenant-right on terms to be settled by an arbitrator ; 4thly, That when there is no written contract, the tenancy should be deemed to terminate on the 1st of November, and the tenant be entitled to a year's notice to quit.

As to evictions, the tenant can protect himself by refusing to take a farm without security that he shall enjoy it for a reasonable time.

I have made no allusion to a difference in race, as creating any reason for a difference in legislation between England and Ireland. When the Celt becomes the absolute owner of land, he is just as willing as the Saxon to become a landlord, and to insist upon all a landlord's rights, which he then seems to think very reasonable. It is only when he becomes a tenant that his peculiarity is said to appear in a dislike to fulfil his engagements, and in a wish to hold his land at a lower rent and for a longer term than he is entitled to by his contract. I suppose the Saxon farmer would have the same desire. It is impossible to frame laws to suit the feelings of people who dislike to pay their debts, or to fulfil their engagements and to respect the rights of property, and in general to act as men are required to do in every civilised community. There is no valid foundation for this charge against the Irish Celt. England had the power of making laws for Ireland at a time when selfishness reigned supreme in the councils of every state ; and Ireland, as the weaker country, suffered some injustice from her stronger sister. But times are altered. No man now would think of doing an injustice to Ireland for the sake of any supposed benefit to

England. The two countries are now parts of one united kingdom. All grievances have been swept away, although the memory of them still remains, and will be kept alive by the exertions of those who have an interest in fomenting discontent. But a just policy will eventually bear its fruit ; and if the laws are framed for the good of all, without reference to party interests, and are impartially and firmly administered, it will probably be found that the Celt is as quiet and amenable to law, and as willing to be honest and true to his engagements, as if he belonged to any other race.

But even the best laws will be of little service unless the people are disposed to act justly and reasonably. The landlord should not strive to be the master of his tenant. He should set the land at a reasonable rent and on fair conditions, and not hope to keep the tenant in subjection by exacting a rent which he cannot pay, or inserting covenants which he cannot fulfil. Even when leases are granted they are often stuffed with covenants which would ruin the tenant if he obeyed them strictly.

But some change is also required in the tenant. He should not enter into any contract which he is unwilling to fulfil. It is no excuse for him to say that he cannot get land on any other terms, and that he must be a farmer, as every other business is overcrowded with competitors. Such an excuse is contradictory to itself, for if he cannot get a farm except by offering more than it is worth, it shows that farming is subject to as keen a competition as other trades. If he cannot get a farm on reasonable terms he should take to some other business, or emigrate. He may think that this is a great hardship, but it is a hardship that is not caused either by the law or by the landlord. If two men desire to get the same farm, one of them must do without it ; and if the competitors are honest, and will not offer too much, the one who succeeds will be better off, and the one who fails will not be worse off, than at present. The same rule that I suggest as to his rent should apply to all the conditions of his tenure.

Instead of first taking a farm, and then complaining of the conditions, he should refuse to take any farm except on such terms as he considers just and reasonable.

A man who is to have a voice in the government of the country should not make any contract which would make him dependent on the liberality or forbearance of any other man.

CHAPTER VIII.

It is frequently said that in Ireland the landlord erects no buildings, and makes no improvements on the land; that everything is left to the tenant, who builds and improves at the risk of having the improvements made by his labour and capital seized by the landlord, or made an occasion of raising the rent; and that this was not a very unusual course for the landlord to take.

At no time was it a matter of every-day occurrence for a landlord to seize his tenant's improvements before he had enjoyed them for a remunerative period. Improving tenants without leases would not be so foolish as thus to lay out their capital without a confident expectation, founded on the prevailing customs, that the landlord would not take advantage of their confidence in his honour. Cases of inconsiderate and unjust harshness could never have been very frequent, and they are now exceedingly rare.

The real grievance was, not that the tenant frequently lost the value of his improvements, but that his liability to this loss generally prevented him from making those improvements which would have been profitable to himself and useful to the country.

It is true that if any man searches for cases of grievances suffered by tenants, he will have plenty of stories told to him: many of them will be utterly false, and many of them will have a slight foundation of truth, distorted by the most monstrous exaggerations. When names, dates, and facts are not stated, it is impossible to expose and detect the falsehood. "One story is good until another is told."

I am told that a tenant held a farm at a rent of £40, that he built a house at an expense of £100, and then was ejected without any compensation as soon as he owed one year's rent. Such a story may lead to the murder of half-a-dozen landlords, or to the robbery of the entire class, when the propagator describes the look of inextinguishable hatred with which the narrator mentioned it to him. I do not believe in the possibility of such a case pure and simple. An ejectment is not a

sudden irreversible process. The proceedings take some time to bring them to a termination; and, even after they are concluded, the law allows the tenant six calendar months to pay his rent and redeem the land. This period is reckoned not from the judgment in ejectment, but from the actual dispossession of the tenant by the execution of the *habere*. The story, therefore, is that the tenant was rich enough to build a house and to cultivate his farm, which generally requires a capital equal to five years' rent, but that he could not get money to pay half a year's rent, and had no friends or credit to enable him to borrow money to pay his rent. A tenant is not evicted for non-payment of rent until after he has become hopelessly insolvent.

I should expect that on investigation it would be found, either that the story was totally false, or that it was subject to one or more of the following qualifications. The tenant did not build the house at his own expense; the landlord supplied the roof and timber-work, and gave other aid. The tenant was in the enjoyment of the house a sufficient length of time to recompense him for the portion of the outlay that he had incurred. The landlord at various times forgave him large arrears of rent in consideration of his outlay on the house. The tenant ran out and wasted the land, and owed considerably more than a year's rent at the time of the eviction. I suggest those qualifications to show with what reserve such a story should be received until it is fully investigated, especially when it is told by a person evidently anxious to make a case against Irish landlords.

I do not deny that, among the infinite number of cases occurring between landlord and tenant, many may be found in which the landlord acted harshly and oppressively to an honest tenant, as well as cases in which the kindness of a generous landlord has met with a very ill requital. But I believe that such cases are exceptions to the general rule, which is, that an honest and industrious tenant will meet with kind and generous treatment, and that a good and liberal landlord will find or make good tenants. But to state all the exceptions to this rule of which one hears on one side, without qualification or investigation, is not a good way of forming a correct opinion of the true state of the Irish land question. The cases in which landlords seized upon real improvements made by their tenants, without giving them compensation, are very few, and

the landlords would suffer nothing by a law which would make such injustice impossible.

As to evictions of solvent tenants, I believe them to be more rare in Ireland than in England. To a superficial observer the contrary might at first appear to be the case, for the following reason. In England, if the interest of a tenant is determined by a notice to quit, or by the expiration of his lease, and the refusal of the landlord to permit him to remain in possession, he gives up the farm, and nothing more is said about it. He merely complies with the conditions on which he obtained possession. But in Ireland he generally resists, and puts his landlord to the expense and delay of an ejectment, and has the newspapers filled with abuse of the landlord and articles on landlordism and evictions. Thus in Ireland nearly every case of removal of a tenant makes a noise, and is brought before the public, and therefore they appear to be more numerous than in England, where they pass without notice.

While I was writing this, I read in the newspaper a report of an action for a libel brought by a farmer. His complaint was that he was falsely accused of shooting foxes ; and, on account of this false and unproved charge, he was deprived by a noble duke, his landlord, of two farms, one of which he had held for sixteen and the other for twenty-one years. The eviction by the landlord was not made a matter of comment, and would have passed unnoticed, only that it was the special damage for which the action was brought. If a tenant was evicted on such grounds in Ireland, the circumstance would certainly be brought before the public, and probably before Parliament.

If there are a hundred men wishing for farms, and there are only fifty farms to be let, then fifty men must do without farms, and take to some other occupation. Whatever adds to the difficulty of evicting a tenant, adds to the difficulty of obtaining a farm, and thus makes the eviction a greater calamity when it occurs.

It is very much against the interests of a landlord to eject a good solvent tenant who is willing to pay him a fair rent. He will find it difficult to procure a tenant with skill and capital to take the vacant farm, and to put himself in the power of an oppressive and unreasonable landlord.

If a careful inquiry was made into the nature of the provocations which are supposed to have led to the late crop of

agrarian outrages, a judgment might be formed of the frequency of landlord oppression. It would not be unreasonable to assume that all the worst instances would be included among those cases which have led to such extremity of revenge.

It may be generally said that four circumstances should combine to make a tenant an effectual improver. He must have, first, a sufficient motive ; secondly, skill ; thirdly, energy ; fourthly, capital. And it is not an uncommon mistake, when some obvious improvement is neglected, to attribute the neglect solely to the want of some one of those circumstances, without taking the rest into consideration.

The landlord frequently is without the capital that is necessary for important improvements on his estate ; for he must pay money for everything (in addition to his family and personal expenses), and the return for his expenditure comes in very slowly. But it is different with the tenant, who seldom wants capital to make some small improvements yielding a quick return. In some cases it might be thought that no capital was necessary, as when a small farmer reclaims land by removing the stones, all the work being done by himself and his family. Some would say that his labour was equivalent to capital, but this would not be strictly correct. The produce of his labour did not support him during the progress of the work. The store of food which he possessed, or the money with which he purchased it, was the capital which he expended in the prosecution of the work. Without such capital, or credit to supply its place, he must have abandoned the improvement, and supported himself by working for daily wages.

Thus the tenant is seldom prevented from making improvements by want of capital. He may be prevented from undertaking something grand, but if his land is in a very wild, unimproved state, there must be some reason other than want of capital for his permitting it to remain so.

For this neglected state of the land a different reason is given by the landlords and the tenants' friends. One says that the cause is that the tenant has not a sufficient estate in the land, and Arthur Young's exaggerated assertion is quoted as if it was strictly true. But excuses for not doing a thing are always to be viewed with great suspicion, especially when they take the form of requiring some great boon as a preliminary to exertion.

I have known many cases in which the occupier held in

perpetuity, or for very long terms, in which the agriculture was as defective and the land as much neglected as if it had been held by tenants-at-will. A good interest given to the tenant is a good thing, but it removes only one impediment to improvement, namely, want of motive; but two impediments may yet remain—sloth and ignorance.

Bishop Berkeley, indignant at the neglected appearance of the country, the houses full of dirt, and the land covered with weeds, rejected this excuse of want of a sufficiently long estate in the tenant, and remarked that things were left undone which would be remunerative if done by tenants even with the shortest leases, and that the Irish proprietors who occupied land which they held in fee were as slovenly and negligent as any tenants-at-will. He thus arrived unfairly at the conclusion that the cause of the neglected state of the land was Irish sloth. He did not see that there was a third cause which might be the operative one, namely, ignorance.

The Irish tenant acted according to his limited knowledge. He had no example to guide him to a better agriculture. Even if a resident gentleman improved his demesne, and made it more productive, the farmer saw clearly that he could not follow the example. The improvement seldom yielded a fair return for the outlay. Works were undertaken with a mixed view to ornament and utility. This was better for the country than if the same money had been spent in idle dissipation; but they conveyed no useful instruction to the farmer. It may be fairly doubted whether any improvement of land yields the average return that may be expected from invested capital. Thus I do not say that no drainage pays; but if all the drainage in Ireland was taken with the mistakes made by inadequate or superfluous drains, or drains badly made, or too deep, or too shallow, or too expensively, or works otherwise unskilfully executed, it is probable that half the works do not yield a return of five per cent. on the outlay. But a farmer will not undertake an expensive improvement unless he is reasonably certain, not only that his landlord will not seize upon the fruits, but that there will be some fruits for himself to enjoy. Thus the want of agricultural knowledge is a serious obstacle to improvements.

There are some improvements which give a return in comfort and enjoyment, rather than in profit. A dwelling-house is of this class. In general a man does not willingly live in a

worse house than that to which he has been accustomed ; but he seldom desires one much better. It is very much a matter of habit. The starving occupier of a fetid, squalid hovel would wish for strong drink and tobacco, better and more abundant food, good clothes and less work ; but the last of his desires would be a larger and cleaner house. He would scarcely accept it willingly on the terms of his keeping it clean and in good repair.

This has tended to discourage the landlords from building good houses for their tenants. They found that the tenants did not value them, and were often unwilling to keep them in repair, although it was generally found that after some experience they felt and appreciated the advantage of the decency and cleanliness which at first they disliked as cold and troublesome. Partly by the landlords, and partly by the tenants, comfortable farm-houses have been built, and improvement in this respect is still making progress. In a few instances houses have been built by tenants relying on the honour of their landlords ; and very few would object to a law that would entitle a tenant to compensation who built a house suitable to his farm.

In many arguments on the compensation that a tenant should receive for his improvements, a calculation is made of the compensation or enjoyment that would be sufficient if the improvement was made in the most successful manner, and with the greatest skill and economy. This is hardly fair. Every improvement is to a certain extent tentative, and the enjoyment or compensation should be such as to remunerate a tenant of average skill and good fortune.

It is frequently said that drainage will repay the first outlay with interest in seven years. I do not assert that such a thing never happens, but I am sure that it could not be truly said of one-tenth of the drains that have been made in the United Kingdom.

It requires less skill to reclaim than to improve. The former is done either by carrying off surface water or by removing stones. These works are done by the cotter and his family. They yield a very moderate return, but the results are obvious to the most unskilful, and hence it happens that they are often executed by tenants with very precarious interests, while more profitable works, requiring more skill and foresight, are left undone by tenants with much longer leases. If sloth

was very prevalent, the sterile land would not have been reclaimed; if want of tenure was the only cause, the good land would have been more generally improved. It was want of skill that confined the efforts of the most energetic to those works which required no skill to accomplish or to appreciate them.

Arthur Young describes the effects of letting land on profitable leases to persons without skill or energy: "They are, however, sometimes resident on a part of the land they hire, where it is natural to suppose they would work some improvements; it is, however, very rarely the case. I have in different parts of the kingdom seen farms fallen in after leases of three lives of the duration of fifty, sixty, and even seventy years, in which the residence of the principal tenant was not to be distinguished from the cottared fields surrounding it." He attributes this to the idle, drunken habits of the small country gentlemen: "Living upon the spot, surrounded by their little under-tenants, they prove the most oppressive species of tyrant that ever lent assistance to the destruction of a country. Not satisfied with screwing up the rent to the uttermost farthing, they are rapacious and relentless in the collection of it." "If long leases at low rents and profit incomes given would have improved it, Ireland had long ago been a garden." Such were the results of long leases given to persons ignorant of agriculture, and without efficient covenants to prevent them from subletting. If they had been possessed of sufficient skill, they would have found it more profitable to cultivate than to sublet.

CHAPTER IX.

MANY think that the wealth of Ireland may be increased by the cultivation of new crops, or the employment of new instruments, which they accordingly recommend with great zeal. They are not aware of the difficulty of introducing improvements in agriculture, nor how little profit the persons who adopt them should expect. Nevertheless, several improvements in both crops and instruments have made their way in Ireland in the present century. Improved carts and ploughs have almost superseded

the old-fashioned car and plough which were in general use seventy years ago. Through a great part of Ireland the threshing machine is used instead of the flails, and the scythe instead of the sickle. The American rake and the tedding machine are used in making hay, and even reaping and mowing machines may sometimes be seen in use.

But the use of new machines proceeds more slowly in agriculture than in manufactures. It is less necessary to the individual, as it does not diminish the price of agricultural produce, and therefore the farmer may, without loss, continue to cultivate his land in the manner to which he has been accustomed.

But the chief impediment is, that the operations of agriculture are periodic, and not continuous, and the division of labour does not produce a division of trades. The same loom may be employed every day in the year; and if one loom did its work at half the cost of another, no weaver could hold his ground who used the inferior loom. But a machine of great efficiency in sowing turnip-seed may make its way very slowly.

The farmer would have occasion to use it only two or three days in the year, and the advantage of its use during those few days is all that is obtained to pay the interest of the first cost of the machine, and the expense of finding a place to hold it during the long time that it is unemployed. This latter item is not unimportant in the case of a small farm. Besides, sowing turnip-seed is only a small part of the business of a farmer, and he may till with profit, although he does not perform this particular operation in the cheapest and most efficient manner. The same observations apply, with greater or less force, to all the operations of the farm.

Similar causes impede the introduction of new crops, or new modes of cultivation. The work that is done only at intervals of a year is not easily learned. When once it has taken root this difficulty is diminished, for the difference between the earliest and latest periods of performing any operation extends the time during which the business may be learned by observation or by actual work.

Thus, if you introduce the cultivation of flax into a district into which it was not known before, it is necessary to steep it: you superintend this operation, and give the most precise instructions to your workmen. The work is done, they are employed during the rest of the year on other business, and

when the season for the same operation comes round again they will be found as ignorant as they were the preceding year.

Still some new crops have been introduced with advantage during the present century. Seventy years ago, turnips and mangolds were unknown to the working farmer, and even clover and artificial grasses were seldom sown except by a gentleman farmer.

The manner in which the cultivation of flax has been almost confined to one province of Ireland shows very strongly the difficulty of introducing the general cultivation of a new crop. It is not unknown in the other provinces, but it is generally profitable only in Ulster. This is not caused by any peculiarity of soil or climate. The crop is equally good in other parts; but it is not equally profitable, and missionaries go about in vain recommending its cultivation. Some say that a large profit may be expected; others say that they have tried it, and found it unprofitable.

But if the produce of the soil could be doubled, it would not diminish the discontent of the Irish tenantry. Their complaint is, not that the land is unproductive, but that it is not their own. It is a dispute for property, and at present any increase in the productive powers of the land would only embitter the contest by enhancing the value of the prize.

As the evils presented themselves to my mind, I could not forbear from considering whether any remedies could be found. I considered that the following principles should be kept in view:—

1st. There should be no injustice nor confiscation or property.

2nd. There should be no interference with freedom of contract, and the law should do nothing to encourage those modes of dealing which are at least beneficial to the nation. An apparently immaterial law in constant operation may have an important effect in moulding the habits of the people. It is even possible that the relation between landlord and tenant may have been influenced by the fact that a stamp is necessary for a lease, but no stamp is required on a notice to quit.

3rd. The landlord, subject to all express or implied contracts, and to all equities arising from past transactions, is entitled to the present value of the land, and to all increase in its value which does not arise from the acts of the tenants. Independent of the injustice, it would be impolitic to deprive

the landlord of all interest in his estate, and to remove him from his natural position as the guide and friend and assistant of the tenant in the management of his farm. It would produce extensive absenteeism, by converting the landlords into mere receivers of fixed rents, without any interests in their estates. They would be an idle, useless, unhappy body of men, without any incentive to work, or any special duty or occupation.

4th. Although the tenant should not get his landlord's property for nothing, he ought not to be deprived of anything for which he paid with the concurrence of the landlord, although he may have trusted to the rules of natural equity, instead of complying with all the formalities required by a highly-artificial state of the law.

Lastly, although men cannot be compelled to perform duties of imperfect obligation, they ought not to be permitted by any contract or promises to put the performance of those duties out of their power. Thus no settlement or encumbrance should prevent the landlord, while in the enjoyment of his estate, from dealing in a liberal spirit with his tenantry. Every landlord ought to have it in his power to give either a parliamentary tenant-right, or a lease of forty-one years at a reasonable rent, and to make an agreement to compensate a tenant for his improvements.

It may be thought by many that in suggesting forty-one years I have named too long a term, and that a lease of twenty-one years would give a tenant sufficient enjoyment to compensate him for any improvement, except buildings, that he might make on his farm. To this it may be answered that, generally, the Irish tenant is not of this opinion, and that a lease of twenty-one years would not induce him to improve. That a lease for forty-one years is much shorter than a lease for three lives, which is commonly permitted by marriage settlements, and that it is not the length of the lease at its commencement, but the length of the term when the tenant is about to improve that is the operative inducement. A prudent tenant will not make any change immediately on his obtaining possession of his farm. He will wait until experience has made him intimately acquainted with its wants and capabilities. If all leases were granted for terms of twenty-one years, the unexpired terms would be of the average length of only ten and a half years, and if they were granted for terms of forty-one years, the

average unexpired terms would be six months less than twenty-one years.

With such an extension of leasing powers to the landlord, and with a right to the tenant to get compensation for his improvements, and a Parliamentary tenant-right whenever he has fairly earned it, the chief grievances would be remedied without any violent interference with the rights of property.

But if a man voluntarily enters into a contract to take land with a precarious tenure, he has no right to demand to have it made permanent until he has done something to earn an enlargement of his estate. To accede to such a demand might do a serious injury, not to himself indeed, but to his class. If the rights arising from mere occupation are made too strong, men who have land in their possession will be very careful not to let a new occupier get possession, and the poor will be relegated to densely-packed villages. The owner of land may be disposed to give a labourer the occupation of a comfortable cottage and garden. This will be a great benefit to the labourer at a very slight loss or inconvenience to the landowner; but it is essential that the occupation should be precarious, so as to prevent the labourer from making that occupation a source of great discomfort to the landlord. If the labourer neglects his work, or has ill-conducted children, or harbours persons of bad character, or even keeps pigs and poultry, frequently trespassing on the landlord's property, it will be necessary to resume possession from him. There may be many other cases, which I need not enumerate here. Call the landlord's conduct capricious, arbitrary, tyrannical, or by any other epithet of abuse, it is necessary that he should have the power of removing the cottier on a reasonable notice, or he will not put any cottier in possession of any land. The option in future will not be between a fixed and a precarious occupation, but between a precarious tenure and nothing.

The same loss to the labourer will ensue if the landlord cannot obtain possession without expense at law, or being held up to public odium as a tyrant and oppressor. He will consider all the consequences which are likely to result from the reception of a cottier tenant, and if either law or custom makes those consequences grievous to him, he will be so much the less willing to give accommodation to the labourer.

CHAPTER X.

PROPERTY in land differs in its origin from property in any commodity produced by human labour. The product of labour naturally belongs to the labourer who produced it. If he works for wages, his employer is entitled to the product as assignee of the labourer. The substance of the contract is, that the employer pays a certain present sum as wages in exchange for the future uncertain product of the labour.

But the same argument does not apply to land, which is not the product of labour, but is the gift of the Creator of the world to mankind. Every argument used to give an ethical foundation for the exclusive right of property in land has a latent fallacy. It omits a portion of the value which ought not to be left out of consideration. I shall call attention to one or two of them.

First comes the argument founded on the rights of labour. Land, it is said, is worthless until it is cleared and cultivated, and it properly belongs to the man who has improved it, or brought it into cultivation. There would be some force in this argument if land was worth nothing beyond the value of the labour laid out upon it; but if this is not the case, the argument is subject to this objection, that it permits one man to improve another man's estate, and then hold it as his own. This is what is called improving a man out of his property. Here is some land very convenient and suitable as a site for building; it belongs to no person as private property, and therefore I, as a member of the community, am a part owner of it. Another person takes possession and builds a valuable house on it, and then claims the land as exclusive property on account of his buildings and improvements; am not I thereby improved out of my estate? I was a part owner once, and now I have no interest whatever in it. Land of very indifferent quality in the neighbourhood of a town frequently is sold or let for a large sum as a site for building, before a single penny has been laid out in reclaiming it. Although it is of no present use, still its capacity for being built on gives it a present value.

In this case the original value can be estimated, and in fact it is often separated from the additional value which the land

derives from the buildings placed on it. It is the ground-rent which a tenant would be willing to pay on condition of getting a grant of the land in perpetuity.

But without any reference to building land, it is easy to find large quantities of land in Ireland of which the value cannot be attributed to any labour expended on them. Indeed, some of the land is probably of less value than if it had been left in a state of nature; and yet it is private property.

It might at first appear as if the argument against the right to property in land, as founded on labour, applied equally to the case of manufactured articles. The raw material did belong to the community, which is deprived of it by the individual who manufactures it, and converts it into his own exclusive property. This objection would be valid if the raw material was in limited quantities; and if the labourer, for the purpose of the manufacture, seized upon a greater proportion than his share would be as a member of the general community. But this never happens. As a matter of fact, the value as well as the right of property in a manufactured article is derived from the labour employed in producing it; and the title could generally be shown through the most important stages. It is equally certain that neither the title to property in land nor the chief part of its value is founded upon labour. It was in general claimed as property before any labour was laid out on it.

The right arising from the first discovery is sometimes alluded to as a possible foundation for the right of property in land. But this must refer to the right of the whole community, and not to the right of any private individual. When once a party lands upon an island, the whole island is substantially discovered. They all know the land is there, although they have not actually walked over every foot of it. But suppose the case of a discovery made by an individual. A party of men and women discover an uninhabited island, and take possession of it. Good water for drinking is scarce, and different persons go in various directions. One man, either by superior intelligence or better fortune, discovers a well which yields an ample supply. This does not give him a right to exclude the rest of the party. They must possess the same natural right which they had before the discovery, to use the well if they can find it. The right of the first discoverer is merely to keep his secret, or to sell it to the community for the best price which he can obtain for it.

The case bears some analogy to the patent laws, and therefore I may allude to an argument which is sometimes used in their defence. A man invents some process, and it is said that if the public makes use of this process he is deprived of the fruits of his industry and inventive talent. But this assumes the very point in dispute: it assumes that one of the natural fruits of a discovery is the right to prohibit every other person from doing the same thing. This is not a well-founded assumption. His natural right is only to use it himself. The first man who broke a cocoa-nut and found the inside eatable would have a right to eat it himself, but he would have no right to insist that no other man in the world should ever eat any other cocoa-nut without his permission.

The fact of possession is sometimes given as the origin of private property in land. The man who gets first under the shade of a tree has a right to remain there undisturbed. He cannot be removed without a breach of the peace; and this right seems to be acknowledged by the inferior animals. It is sometimes added that the mere fact of taking possession is of itself an act of labour, and therefore that the right of property thereby conferred is within the general rule, that labour creates a right to property.

To this it may be replied, that this right, if it existed, would only last as long as the possession in which it originated. It could not extend over a large estate, nor be transferred to another person. As to the acknowledgment of the right by the lower animals, even if we were disposed to learn ethics from their example, there is great reason to doubt the fact. It probably exists only so far as the beast in possession has sufficient strength to make it inconvenient for any other beast to disturb him.

When it is said that the mere taking of possession is an act of labour, it should be noticed that even if it deserves the name of labour, it is not of that sort which can confer a title to property. The only labour which can give a title to property is that labour which has created the value of the property that it claims.

The foundation of the right to property in land is not ethical, but political. Its origin is expediency. In order that it may be cultivated to the most advantage, it is necessary that the cultivator should be secured in the enjoyment of the fruits of his intended industry. For this purpose it is necessary that

the person who is permitted to use the land should be permitted to enjoy it for a certain length of time, to make it his interest to cultivate it in the most productive manner. This period varies with the increase of foresight and agricultural knowledge.

It is easy to conceive a state of things in which men did not look beyond the passing year. They sowed and they reaped without any knowledge or care whether the land was left in a better or worse condition.

But the inconvenience of a frequent repartition of land is quickly perceived, and this is best avoided by permitting land to be held in absolute ownership, subject to such taxes and regulations as the State shall from time to time think it reasonable to impose.

It seems just that land should be charged with the duty of maintaining the poor, so that no man should be destitute on account of the existence of private property in land. Those who are able to support themselves owe that power to that general wealth and civilisation which could not have existed without the establishment of private property in land; and those who are not able to support themselves, receive from the poor-rates a better subsistence than they could extract from their share of the land of the country if undivided and unreclaimed.

But the rights of the present owners do not depend upon the truth of any theory respecting the origin of proprietorial rights. It is a rule of natural justice that says, that if I encourage a stranger to buy from a wrongful owner property that is really mine, I cannot justly press my own claims against the purchaser. This is the case with land in every settled country. The present owners either themselves purchased the land, or derive their rights under those who purchased it with the sanction of the community, represented by the authority of the State. In many cases, the State itself received part of the purchase-money from stamp-duties on the purchase deeds.

In this manner the title of the landlord appears to be perfect as well against the nation at large as against every member of it. But there is one person in particular who cannot claim the land without the most shameless dishonesty; and that is the tenant who has obtained a temporary possession of the land by means of a contract with the landlord.

I wish for a farm. I see one that suits me. I apply to the person in possession, who claims to be the owner, and I agree

to take a lease of it for twenty-one years, or as tenant from year to year at a rent of £50 a year, and to give him back the farm when the lease expires. Nothing can be clearer than that I can claim no right to that land beyond what is given to me by the lease. It either belongs to the landlord who bought, or to the nation at large, but certainly not to me. If it belongs to the landlord, I can claim nothing but my bargain, viz., possession for twenty-one years. If it belongs to the community at large, my right is still less. It would be strange that I should claim more than my bargain, because I made the bargain with the wrongful owner.

I have put the case of a tenant obtaining the possession of land by a contract with the landlord, and on that possession, on that contract, resting his claim to hold the land for a larger period or at a smaller rent. But there are other cases in which the tenant has done something more, and in which he has some equitable rights, which, although they are rather vague, are yet, I think, capable of being ascertained, settled, and conceded by carefully-considered legislation. The two chief cases are—first, where the tenant has made such permanent improvements on the land as were necessary for its efficient cultivation, or for his decent and wholesome habitation; secondly, where the tenant has, to the reasonable knowledge of the landlord, paid the outgoing tenant money for his interest in the farm.

In the former case, it must be supposed that the tenant made the improvements, or erected the buildings, in the belief that he would be permitted to enjoy them. It is incredible that any man should build a house if he was assured that another should enjoy all the benefit, either by turning him out, or by charging him rent for it. The same argument applies to the case of a purchase of a precarious interest. The landlord who permits the purchase of a mere tenancy-at-will must be considered as encouraging the belief that the purchaser thereby acquires a substantial interest in the land.

A third case in which the tenant seems to be entitled to something more than the law gives him, is where he has made a reasonable bargain with the apparent owner of the land. There is a common-sense distinction between a purchaser and a tenant which the law does not sufficiently recognise. The man who buys an estate, and the man who takes a farm in order to earn his bread by its cultivation, are treated by law in

the same manner, and are subject to the complicated laws of real property. These laws are troublesome and inconvenient so far as they affect purchasers, but are oppressive and unjust, where they disturb the title of a tenant.

It may be said that it is not easy to distinguish between a tenant and a purchaser. A man takes a lease of land for a thousand years at a rent of a penny an acre. Is he not to be considered a purchaser, although he takes the land for a limited term, and is subject to a rent? Add a penny to his rent, and take a year away from his term, he is still a purchaser. Continue this process, and you may have him paying a rent of £4 2s. 6d. an acre, and with a term of only ten years. He is then clearly a tenant. At what step in the process did his position change from a purchaser to a tenant?

Such an argument has no practical force. It must be met by drawing an arbitrary line at some reasonable point. Say that a tenant, whose rent is not less than three-fourths of the value, and whose term does not exceed forty-one years, shall not be disturbed in consequence of any settlement or encumbrance affecting his landlord's interest.

It is inconsistent with justice that a man should hold land at a certain rent, and for a certain term, without any claim except that he took the land for a different term and for a different rent. A man takes a farm to-day, and demands that a law shall be made which would enable him to sell his lease next day for several hundred pounds. This is to give him a property which he did not purchase or earn, merely because he threatens to commit murder if he is kept to his engagements.

However, no demand founded in justice ought to be refused, merely on account of the improper manner in which it is demanded. I must not refuse to pay a creditor because he presents his account or demands payment in an uncivil manner.

I have made these observations on the origin of property in land to show that the State retains the power of modifying it from time to time in accordance with the general interests of the community. This right of private property in land is a political, not a natural institution. "*Nam propriæ telluris herum, natura neque illum, Nec me, nec quenquam statuit.*"

What justice requires is that changes in the law should not be directed against any particular persons, but that all who are in similar circumstances should be treated in the same manner. A land-tax of ten per cent. would not be unjust if it was thought

necessary for the security of the kingdom ; and there would be as little injustice in a law which modified the rights of property for the same object, even although the result should be equivalent to a tax by causing some diminution in the value of the property.

It is sometimes supposed that a change in the law would be unjust to purchasers under the Landed Estates Court. I see no grounds for that opinion. The Act of Parliament which constituted the Court did not give a guarantee against future legislation. To do that is beyond the power of Parliament. What the conveyance of the judges gives is the perfect right to the land, subject only to the adverse rights mentioned in the deed, and to such obligations as may afterwards be imposed, either by the purchaser or by the authority of Parliament. It may almost be said that the latter comes within the former case, as the House of Commons is the lawful representative of the purchaser.

It could hardly be contended that the purchaser with a Parliamentary title should be exempt from all Acts passed for the relief of the poor, or that the area of poor-law taxation should not be altered, and yet such changes might have the effect of giving his poorer tenants a substantial interest in his estate.

What the purchaser has a right to insist on is, that no law shall be specially directed against him, and that no rights shall be set up which were in existence at the time of his purchase, but were omitted from the deed of conveyance. But in common with all the subjects of the realm, he must take subject to all regulations that may be made by lawful authority, whether they increase or diminish the value of his property. The purchaser, by the fact of his purchases, places himself in a new relation to a certain number of persons, which imposes on him some very important duties, and it is for the State to determine whether those duties shall be enforced by law or trusted to his own conscience for their fulfilment.

The following changes might be made in the law of real property, and they do not violate any natural or political right.

First, the Law of Primogeniture should be abolished, and all the children of the same parents, and their descendants should have equal rights to the land of their direct or collateral ancestor. Under the influence of this new law absenteeism would quickly disappear. Some of the children of an

absentee would sell the estate which descended on them, and for which, not having seen it, they could entertain no special affection.

No lease nor agreement between landlord and tenant should be liable to any stamp duty.

No settlement or encumbrance should prevent the owner of land in possession from having the following power :— First, he may make any lease for any term not exceeding forty-one years at a rent not less than three-fourths of the full value, or competition rent. Second, he may take a fine on granting a lease. Third, he may agree that the tenant shall be entitled to tenant-right as above defined. Fourth, he may agree with his tenant to give him compensation for improvements.

If a lease is made for a shorter term than forty-one years, the landlord should not be permitted to distrain for rent.

If a lease is made for a shorter term than forty-one years, and without tenant-right, all poor-rate and county-cess should be borne by the landlord.

No proceedings should be taken to recover any arrear of rent which accrued more than a year before the commencement of the proceedings.

In the absence of a written agreement, the tenancy should determine on the first of November, and require a year's notice to quit.

The arbitrator should have power to award Parliamentary tenant-right to any tenant who had fairly earned it by his outlay.

The tenant should be entitled to the trees he planted, without the necessity of registering them.

CHAPTER XI.

TEN years have elapsed since I wrote for the Cobden Club an essay on "Land Tenure in Ireland," which I have been lately requested to revise. On reading over the essay, I found so little that required alteration, that I thought it better to let it appear in its original form, and to add a chapter to explain the changes which have been made, or which have become necessary or expedient, since the essay was first published.

An important change in the relative position of the landlord and tenant was made by the Land Act of 1870. It restored and strengthened the feeling which prevailed among the tenants that they, with the landlords, were joint owners of the land, or that the landlord was the owner of the rent, and the tenant the owner of the land. Every mode of recovering rent was considered fair except an ejectment, and an ejectment for non-payment of rent was thought to be an unfair and an unreasonable proceeding. This feeling prevailed more especially in the poorer districts.

It is not difficult to understand how such an opinion should gradually arise. Let us view the common case of an estate which for many years had been occupied and cultivated by the same families. For several generations no tenant had ever seen the landlord or any of his family. Everything was left to the agent. The landlord himself did not know the names of his tenants, or the condition of his estate.

On the other hand, the agent frequently considered the collection of the rents to be his only duty, and this with a pauper tenantry was no easy task. He had in his employment, in each division of the estate, a man who was popularly called the "driver." His duty was to distrain the cattle of the tenants and to drive them to the pound. Rent was seldom paid, except under a distress or threats of a distress.

But with this exception of demanding rent, the agent paid no attention to the condition of the estate. The tenants did whatever they liked. They divided and subdivided their farms, and they improved or wasted them according to their inclination or convenience.

It was not wonderful that men should consider themselves at least partly owners of land on which they or their forefathers had done everything which made it valuable, and which they had been in the habit of dividing, and even of destroying, as they thought proper.

Although a distress for rent was very common, it was not usual to resort to an ejectment for non-payment of rent. It would have been of little use. The agent would probably not have known what lands to seize under his *habere*, and even when he got possession, he would not know what to do with his prize. A plot of eight or ten acres of poor wasted land, surrounded by a few hundred acres of land of the same quality in the occupation of a pauper tenantry, would not offer much

temptation to a farmer with any capital to come and reside on it. One of the tenants of the estate must therefore get the farm, and as there is little difference between one pauper tenant and another, it was as good to let the original tenant remain in undisturbed possession.

Another disadvantage to the landlord of an ejectment was that several gales of rent were thereby irrecoverably lost. They could not be recovered from the insolvent who was put out, and the new tenant who is put in would, by the custom of the estate, be entitled to owe the running gale, or even greater arrears, before he could be called upon to pay any rent. An ejectment was considered a vindictive rather than a remedial proceeding.

The tenant admitted that the landlord had a right to the rent, while he considered that he himself had a right to the land. This right of the tenant appears to be inconsistent with the unlimited right of the landlord to raise the rent. This is true in theory, but in practice the tenant did not regard it, as he already owed more than he could pay. The landlord took as much as he could out of him, and he could do no more. The insolvent tenant did not much care if his rent was doubled ten times over. But when a better state of things arose, and the tenants began to have some capital, the inconsistency between the two propositions became practically apparent. Tenants maintained that as they had a property in the land, the landlords could not have an arbitrary power to raise the rent. Landlords asserted that as they had an undoubted right to raise the rent at their discretion, it was clear that the tenant could not have any property in the land.

The Legislature appears to have settled this dispute by the Landlord and Tenant Act, 1860, 23 and 24 Vic., cap. 154, s. 3, declaring that "the relation of landlord and tenant shall be deemed to be founded on the expressed or implied contract of the parties, and not upon tenure or service;" but an Act of Parliament cannot extinguish a sentiment, and the feeling of the tenantry remained the same as if that Act had not been passed.

It is to be observed that this feeling was strongest among the poorest tenants. The substantial farmers, who had long leases or large farms, with ample capital, did not share in this feeling. The causes which naturally produced it did not extend to them, but a feeling which is profitable to those who

entertain it has a tendency to spread. The causes which had led to this opinion of ownership had long ceased to exist except in a few spots, but the opinion or feeling still remained.

With the growth of intelligence, and increase of capital, a strong opinion grew that the laws relating to land were injurious to the prosperity of Ireland, chiefly by not affording the tenant a sufficient inducement to make those improvements which the landlord was unable or unwilling to undertake. To remedy this several Acts were passed which were improvements in a small way.

About the year 1870 it was perceived that considerable changes in the law must be made, and that those changes would in general be favourable to the tenant as against the landlord. Such changes might be more useful to the tenant than injurious to the landlord. The consequence might be a great increase in the production of wealth, of which some part would go to the landlord, although the greater share would belong to the tenant who produced it.

Under these circumstances the Landlord and Tenant Act (Ireland), 1870, was introduced. This Act, in the first place, legalised the Ulster tenant-right custom, and made it binding on the landlords who had allowed their tenants to enjoy it as an indulgence. In the next place, a new principle was introduced by section 3, under the name of compensation for disturbance. This disturbance did not consist in any unlawful act, but in the mere enforcement by the landlord of the rights secured to him. The landlord was obliged to give the tenant compensation for requiring him to give up the land at the expiration of his lease, according to the terms of his contract. This right to compensation for disturbance applied to all tenancies from year to year, and to certain leases made after the passing of the Act. Under this section a landlord, who put a tenant in possession as tenant from year to year, and let him enjoy it for five years, and then took it back from him under a notice to quit, was obliged to pay him seven years' rent as compensation. Thus the tenant held the land rent free for five years and got two years, as compensation for being deprived of it.

This provision of the Act certainly gave the tenant a property in the land beyond, and even contrary to, his contract. Compensation naturally means full compensation. The disturbance implies a wrong, and it appears almost a logical

consequence that instead of permitting the landlord to do this wrong, on condition of his payment of a limited compensation, he should be absolutely deprived of the power of disturbing the tenant except for causes to be approved of by a proper tribunal. This would introduce fixity of tenure in all the interests coming within the disturbance clauses.

An ejectment for non-payment of rent may under the Act be deemed a disturbance in the case of small holdings where the rent is exorbitant, or where the arrears amount to more than three years' rent. It is not easy to understand why a tenant should be entitled to compensation for being deprived of a farm which he held at an exorbitant rent, as he does not appear to have sustained any loss. Although the landlord in this case is not permitted to bring an ejectment with impunity, he may bring an action or distrain from time to time so as to make it impossible for the tenant to cultivate his farm.

The interference of the Legislature in this case assumes that an ejectment for non-payment of rent is a peculiarly oppressive proceeding. And this is true, if it is admitted that the tenant has a property in the land independent of the terms of his contract. The proper inference, however, should be that ejectments for non-payment of rent ought to be prevented altogether.

A short history of the action of ejectment may explain the view which the tenantry take of the proceedings. An ejectment for non-payment of rent was an action taken to enforce a forfeiture for breach of a condition. Forfeitures were odious at law. But the law, instead of rendering those odious things impossible, merely placed some subtle obstacles in their way, but permitted the injustice to remain when those obstacles could be surmounted. The difficulties of enforcing an ejectment for non-payment of rent at common law arose chiefly from three causes. 1. Certain niceties were required as to the time and place of demanding the rent. 2. No assignee or purchaser could enter for breach of a condition. This remedy was only for the grantor and his heirs. 3. It was necessary that there should have been an express condition of re-entry in the lease. These obstacles were all removed in favour of the landlord by various Acts of Parliament, which enacted that no formal demand of rent should be necessary when a year's rent was in arrear. That the assignee of the landlord might sustain an ejectment, and that an ejectment might be main-

tained even when there was no condition of forfeiture, or re-entry for non-payment of rent in the lease under which the land was held. Thus all the protection which the common law gave the tenant was taken away, but the harsh nature of the forfeiture remained. The tenant lost his property without any compensation for its value.

It seems a corollary from the Act of 1870 that the landlord should cease to have the right to eject for non-payment of rent, but that in lieu of an ejectment he should have the power of selling the tenant's interest without greater delay than occurs in any ordinary action. He can thus obtain either the land or the rent, as he may attend the sale and bid up to any amount not exceeding the rent due to him. The rent and cost should be the first charge on the produce of the sale. In analogy to the statute of 1870 the sum to be thus recovered might be limited to the amount of three years' rent. Indeed, it would be an improvement of the law, to make it impossible to recover by action or otherwise any rent that accrued more than three years before the institution of the proceedings.

The Act of 1870 gives the tenant compensation for all improvements made by himself or his predecessors in title on more liberal conditions than are to be found in any former Act. It creates a presumption that all the improvements found upon the land were made by the tenant, unless the landlord can prove the contrary. This presumption will often work injustice by compelling the landlord to give compensation for improvements which he either made or assisted in making.

The Act makes no provision for exhausted improvements, or improvements which must have repaid the tenant for his outlay with ample interest during the period while they were enjoyed. It would be more politic and just to divide the improvements into classes, and to declare that each improvement shall be considered as exhausted in a certain number of years, and that each year exhausted a proportional part of the value. Thus, if drainage is placed in a class which is supposed to repay its value by twenty years' enjoyment, the tenant who expends £100 in drainage will be entitled to £100 compensation, less by the sum of £5 for every year during which he has enjoyed the benefit of the drains. Under the Act as it stands, unless the landlords make very prudent agreements, and are careful to preserve evidence of all their dealings

with the land, they will at some future period be subject to a great amount of imposition and injustice.

The Act also contains some useful provisions extending the leasing powers of limited owners. Those provisions are good as far as they go, but they do not go far enough. Thus this Parliamentary leasing power is limited to thirty-five years. This is not in Ireland considered a sufficiently long term. It ought to be extended to forty-one years at least; sixty-one years would be still better. It is reasonable to give the limited owner this power, when the Act gives him the power to let the land in small farms to tenants from year to year, who will either be entitled to a possession in perpetuity, or to a claim of about one-third of the value of the fee-simple from the successor who puts him out. The right of the limited owner to grant long leases seems, as a matter of justice, to follow from the disturbance clauses.

The Act prohibits the taking of a fine for the exercise of the Parliamentary leasing powers. It is worthy of consideration whether it would not be better to permit a limited owner, under all settlements made after this date, to accept a fine, subject to certain restrictions which may be necessary to prevent abuse.

The Act contains some clauses called the Bright Clauses, intended to create a class of peasant proprietors, by enabling and assisting tenants to purchase their landlord's estates when they were sold in the Landed Estates Court. This part of the Act has not been very successful. Some of the causes of failure cannot be avoided; others are caused by inadvertencies in the Act, and may therefore be removed.

In the first place, it is evident that in general the tenant must buy his lot by private contract, not by auction. It will not answer to sell the estate by auction in lots settled to suit the wishes of the tenants. If each holding was made a separate lot to suit the wishes of the tenants, there would probably be only one bidder for each lot.

In some cases the sale of a few of the best parts of the land to the tenants might prejudice materially the sale of the rest of the estate. Those difficulties are inherent in the nature of the case, and cannot be removed without injustice to the owner of the estate.

But the language of the Act creates an impediment of more frequent operation, which may be removed without injustice to

any person. By the 48th section, the annuity granted in favour of the Board shall be a first charge on the land in priority to all estates and encumbrances, with certain exceptions. The consequence is that if there is any encumbrance, however small, which cannot justly or lawfully be extinguished, the tenant can get no assistance from the Board of Works to enable him to complete his purchase. A lady eighty years of age has a small jointure amply secured by other parts of the estate, on which it is a primary charge. Here the Act makes a dead-lock. The judge cannot convey the estate except subject to the jointure, and the Board cannot lend the money while the land is subject to the jointure. The remedy is to repeal that section, and to permit the Board to lend the proper proportion of the purchase-money on being satisfied that the security is ample, notwithstanding the prior encumbrance.

The Act permits the Board to lend only two-thirds purchase-money. It is thought by some that the proportion might be increased to three-fourths, and perhaps the change might induce a few more tenants to purchase their holdings. Advances might be safely made on a still more liberal principle. It is now limited to two-thirds of the *price* paid for the purchase of the landlord's interest. But before the sale the tenant has often a valuable interest which might be made an additional security. He may have had a valuable tenant-right under the Ulster custom, or by purchase or improvements may have obtained a valuable interest in his farm, but this interest cannot be taken into account when an advance is made by the Board. As the object of the Act is to consolidate the estates of the landlord and tenant into one estate, it is reasonable that the value of both estates should be taken into consideration. The Bright clauses would be much more efficient if they only limited the advance to such an amount as together, with the value of all the prior encumbrances, should not exceed three-fourths of the value of the consolidated estate.

Nothing would tend more to the creation of yeomen and peasant proprietors than the abolition of the Law of Primogeniture and of settlement, by enacting that all children should have equal rights of inheritance, and that every limitation in favour of an unborn person should be void. But this question has been so ably discussed by Mr. Brodrick in his book published by the Cobden Club, that it is not necessary to say anything more on the subject.

CHAPTER XII.

AN essay on Irish land tenures would be nothing if it did not enter into an inquiry about the three F's. These are very closely connected, especially the first two. Fixity of tenure would be of little use to the tenant if the landlord had the right to increase the rents at his pleasure, and a moderation of rents would be of no use if the landlord had a right to turn out the tenant. If the tenant has a valuable and perpetual interest in the land, it seems to follow as a natural consequence that he should have the right of disposing of it.

In due order the first consideration is that of fair rents. No one denies that the rent ought to be fair, but what is a fair rent and how to determine it are the points in dispute. The best method of settling it is by a free contract between the landlord and the tenant. Unless there is fraud or imposition, or unless one party has obtained an unfair advantage over the other, the contract ought not to be disturbed. The advocates for a general settlement of rent by valuation seem to admit this, but endeavour to bring every case within the exception by alleging that the landlord has an unfair advantage; as the tenant who applies for the farm has no other resource against starvation and that there is undue competition, as when one farm is vacant there are six men seeking for it. There is no foundation in fact for this argument. It is not pretended that the five men starved who did not succeed in the competition for the farm, or that the successful applicant was in utter destitution when he obtained it. On the contrary, it is probable that he had some capital to stock and cultivate the farm, and to maintain himself and his family until his crops should come to maturity. He takes the farm merely to improve his condition, Even if there was what is called undue competition, there is nothing unfair in any man taking advantage of the fact that many desire the property which he is about to sell. The great competition is often caused by the fact that the land is to be set at a moderate rent.

There is, however, one case in which the Act of 1870 assumes that the landlord may be condemned for charging too

much rent: that is the case in which compensation may be given for disturbance. When a tenant applies for a vacant farm, he takes into calculation two expenses which he must incur. First, the rent, which is obvious; secondly, the expense of removing his stock and furniture to his new possession. When he takes the farm with a precarious title, he acts on an understanding or belief that he will not be disturbed while he pays the rent, nor have his rent raised unless some increase is made to the value of the land independent of anything added to it by his own outlay. If the landlord now demands an increase of rent, the tenant is not in the same independent position that he held before he took possession of the farm. He has already incurred the costs of one removal, and probably worked at very little profit while he was testing the capabilities of every field. This expense and loss he must incur again if he gives up his farm, even if he could obtain a farm of equal value on the same terms. On this point the Act of 1870 considered that the tenant was unable to make a fair bargain with the landlord, and it condemned the landlord for depriving the tenant of his farm, by giving the tenant compensation for disturbance.

But the Act did not draw the natural consequences from the principles which it assumes. If disturbance is a wrong the Act should prevent it, instead of permitting it and giving what may be an inadequate compensation. The Act seems to admit that the compensation may be inadequate, as it limits the amount to a certain number of years' rent—there would be no object in the limit unless cases might occur in which the loss might exceed that amount.

The principle of the Act seems, therefore, to require a qualified fixity of tenure and judicial settlement of rents. In all cases in which the Act now gives compensation for disturbance, it should not be lawful for the landlord to evict the tenant, or to raise his rent, without the sanction of the Land Tenure Tribunal. This tribunal should be strong, fearless, and impartial, and should have full power to settle all moral and legal claims of either landlord or tenant. This law would be a protection to the good landlord and a restraint upon the bad. The former could not be suspected or accused of tyranny or oppression, when he was acting with the sanction of a respected tribunal, and the latter would not be permitted to commit such acts.

The landlord should be permitted to convert the tenant's interest into a lease for sixty-one years on terms to be approved of by the tribunal, and if the tenant does not agree to this he should not be entitled to compensation for disturbance, or protection from eviction.

When a tenant, by any means, acquires a valuable and permanent interest in his holding, it is only reasonable and just that he should have the power of selling it. This third F—free sale—is useful and almost necessary to him, and it does no harm to anybody. It appears strange that men who acquiesce in the first two F's are found to make objections to this. Yet when landlords had the fullest power of preventing assignments, sub-lettings, and sub-divisions, they generally did not interfere, but permitted such acts, even when they altered the nature of the holding by sub-division.

The following argument is sometimes used by supposing such a case as this to occur:—A landlord has a farm to let, offers are made, and he selects, on account of his good character, a man who does not offer the highest rent. This man sells his interest to one of the candidates who had made a higher offer, but had been rejected on account of his character. The effect of the landlord's judgment in selecting a tenant is merely to put a certain sum of money into the hands of a person who perhaps carries it off to America.

But the statesman will not look only to the possibility of cases which may be suggested by an ingenious advocate; he will consider what probability there is that such cases will occur. The case suggested is most improbable. This careful landlord would not select a tenant without inquiring whether he intended to remain on the farm. But putting this point aside, all experience shows, as a general rule, with very few exceptions, that when a tenant sells his farm the change is an improvement; the purchaser is a better tenant than the seller. This is only what might be expected. The tenant sells because he is not thriving. He wants some qualities which are necessary for success. On the other hand, that the purchaser is able and willing to purchase is an argument in his favour. If he earned and saved the money himself it is almost conclusive, and if he has inherited the necessary capital, it is a good sign that he wishes to invest it in some industry instead of spending it in idle dissipation or speculation.

Many of the best and most improving farmers will be found

among those who have purchased their farms, and some of the worst among those who have become tenants by inheritance. Some of these are often farmers only because they find themselves in possession of a farm, and have not energy enough to go away.

When the tenant has a valuable interest in the farm, the rights reserved to the landlord are well secured, and he need not much care who the tenant is. In this, as in other matters, freedom of sale has a tendency to bring property into the hands of those who can make the best use of it.

While the tenant should be permitted to sell his farm, he should not be permitted to sub-let, or settle, or encumber it. If he wants money on loan, his personal credit will be better when it is known that his farm is free from encumbrance, and that therefore he cannot have borrowed from any stranger. This restriction on his dealing is essential to a free and cheap sale. I shall show how cheaply and readily this sale may be made, and probably some one else may suggest a cheaper and better course.

There should be a local registry, in which nothing but leases should be registered. When a lease is brought to be registered for the first time, a copy should be entered in the registered books under a title distinguished by certain letters and numbers in rotation. Suppose the lease brought in falls in its turn to the letters and numbers B D 3471, this entry is endorsed on the lease :—

“This lease was registered on the 1st of June, 1881, in the registry of Limerick, under the title B D 3471.

(Signed) “A. B., Registrar of Limerick.”

At the same time a certificate should be given to this effect :—

“Registry Office of Limerick.

“John Murray, of _____, is the registered owner of the lease entitled B D 3471 in this office.

(Signed) “A. B., Registrar.”

On the back of this certificate the following words should be endorsed :—

“In consideration of £	I	sell
the lease entitled B D 3471 to		
(Signed)		”

"Received the above sum of £
(Signed)

"Dated day of

"Witnessed by ."

When the tenant John Murray agrees to sell his farm to Patrick Connor for £500, they fill up the blanks with the proper sums and names, and have the short conveyance duly signed and witnessed. The document is then brought to the registry office. It is the duty of the registrar to have the document properly stamped, and, if necessary, to get the money for the purpose from the purchaser. He retains the old certificate and conveyance, and enters in the folio for BD 3471 these words—

"Assigned on the day of by John Murray to Patrick Connor."

He then gives to Patrick Connor a certificate with the draft conveyance endorsed similar, *mutatis mutandis*, to that which John Murray had. The proceedings are so simple that a very small fee would be sufficient to defray the expenses of the office.

A registry adds to the expense of a sale if the owner is permitted to settle or mortgage his property, but it may be made very cheap if nothing but an absolute conveyance is permitted.

The Land Act seems to lead directly to the establishment of the three F's in certain cases when the tenant is in possession with a short or precarious interest, but when the landlord is in possession, and is willing to accept a tenant and give him a lease of substantial duration, the law ought not to interfere with the amount of rent or the tenure. I assume that the tenure is of sufficient duration, and the law cannot prevent the landlord from getting the fair market value of his land if he chooses. He may let it to a trustee, and the trustee may sell the tenant-right for the largest sum he can obtain. They should permit him to do directly what he cannot be prevented from doing indirectly.

The landlords of Ireland do not in general wish to exact high rents; but an accusation of oppression and extortion has been brought against the class which bought in the Landed Estates Court. It is alleged that they bought land as a profitable investment, and then charged exorbitant rents in order to

get a good interest on their capital. There may have been a few cases of that description, but taken as a class the new purchasers were better landlords than the men whom they succeeded, and by their better management of their estates, and by a liberal outlay, they have added to the wealth of Ireland, and to the comfort of their tenants and labourers.

The ancient insolvent owners were often good-natured men, but bad landlords. They did not exact a high rent from poor people. The poverty of a tenant, from whatever cause it proceeded, was thought a proof that his rent was high enough. The prosperous tenant met with less consideration. The old landlord did not oppress the tenants, but too often he neglected them. He did not require them to be punctual in the payment of their rents. He let them sub-divide the land as they thought proper; he gave them no advice or assistance, but let them fall into habits of laziness, improvidence, and ignorance, that must necessarily keep them poor. The new landlord was a man of a different stamp. He examined his new purchase carefully; he endeavoured to alter the habits of his tenants; he condemned their system of cultivation; and sometimes raised their rent to that amount which he thought a man with moderate skill and industry ought to be able to pay.

All this was very unpopular with the tenants. Men do not like to be disturbed in their habits—even in their bad habits. They do not like to be told, even when it is true, that their poverty proceeds from their idleness; and, above all things, they do not like to have their rents increased. To them it seemed that King Stork had succeeded to King Log. But although some of the new landlords were too hasty in their changes, the general condition of the tenantry improved under their management.

CHAPTER XIII.

THE Act of 1870 gave the tenant the right to enforce the Ulster tenant-right custom, where it had previously been dependent upon the good will of the landlord, but the Act did nothing to define the custom or to measure its value. This value sometimes falls and sometimes increases, according as the landlord or the tenant is more capable of making a good

bargain. It was an essential part of the existing tenant-right that the landlord had the power of raising his rent on any general increase in the value of land in the neighbourhood. Those who contend for the antiquity of tenant-right must admit that rents have been raised considerably during its existence.

The landlord had, and often exercised, the right of limiting the price which a tenant should receive on the sale of his holding. If he permitted a very high price, he would lie under a moral obligation to the new tenant not to raise his rent. This limitation of the price was the chief means which the landlord had of increasing the rent on proper occasions.

In the sixth chapter of this essay I suggested a plan by which the relative rights of landlord and tenant might be measured and preserved by a self-acting rule. I shall try to answer all the objections that have been made to this plan, as I believe the law concerning the Ulster tenant-right custom cannot be permitted to remain long in its present form.

First objection.—The plan is unjust to the landlord, as it proposes to take away part of his estate and to give it to the tenant. *Answer.*—I do not propose that this tenant-right should be universal. I only give it where the tenant, under the Ulster custom, has already a tenant-right of equal value, or where he obtains it by contract with his landlord.

Second objection.—This plan would not satisfy the Ulster tenant, as his interest is frequently worth more than seven years' purchase of the rent. *Answer.*—I put in the word seven to illustrate the plan, but any other number might be used in its place, when justice required it. A tenant whose interest is worth seventeen years' purchase may have his interest valued, defined, and preserved in the same manner. The number seven is no part of the essence of the plan, which is, that the tenant-right shall be valued at a certain number of years' purchase of the holding, and that neither party shall unreasonably disturb the existing state of things. If the tenant demands a reduction of his rent, he must be prepared to accept seven years' purchase of the reduced rent: if the landlord demands an increase, he must be prepared to pay seven years' purchase of the increased rent. What notice should be given, or at what periods the demand might be made, are matters of detail which present no difficulty if once the principle of the plan is accepted. I believe that the effect of the plan would be that changes would be very seldom made. The landlord would generally permit

the market value of the tenant-right to grow beyond its measured legal value. He would have less inducement to seize on an opportunity of raising the rent when he was relieved from the fear that his acquiescence might create a custom which might steal away a good part of his estate.

Third objection.—What would happen if the tenants should combine to demand a reduction of rents, and thus compel the landlord either to submit to an unreasonable demand, or to raise a large sum of money which might be very inconvenient or perhaps beyond his power. I think the occurrence of such a case impossible. A combination using lawful means can succeed only when all its members are in the same boat, as when a number of workmen enter into a combination that none shall work except on terms to which all agree. But in the case of tenant-right every tenant has a different interest, and may be dealt with separately. John Murray has a farm at the rent of £120 a year, for which the legal value of the tenant-right is seven years' purchase, or £840. The market value would probably be nine years' purchase, or £1,080. He demands a reduction of the rent to £90 a year, which the landlord may refuse, and the tenant will be obliged to accept £630 for what he could sell in the market for £1,080. He will not be likely to expose himself to the risk, I may say to the certainty, of such a loss.

Fourth Objection.—This plan makes it impossible to give the tenant proper compensation for any improvements by which he may have added to the value of his farm. I see no difficulty in this, except what must exist in every state of the law—the difficulty of ascertaining the nature and value of the improvements, the date at which they were made, and the compensation to which the tenant is entitled. When those matters are settled by the proper tribunal, the rest is easy. The improvement is represented by an annuity; the rent is supposed to consist of the rent actually paid, and the annuity which is retained by the tenant. The landlord must make his proposal for the increase of the part of the rent which is irrespective of the annuity, and if it is rejected he must pay seven years' purchase of that rent, together with the value, whatsoever it might be, of the unexpired annuity.

If the interest of the landlord is protected in this manner, it seems unnecessary to give him the power of placing any restriction on the price to be paid to the tenant on a sale.

I have shown how necessary it was formerly for the landlord to look to this, as the price permitted on a sale would be used as an argument to prevent him from demanding an increase of rent. This argument will have force as long as the landlord retained any right of interference with the sale. Even when the right of interference is gone, the new tenant will have a feeling as if there was great weight in the argument. When rights are left vague and undefined, any topic may be used as an argument; but when the tenant-right is fixed as a certain number of years' purchase, the rights of the landlord are preserved from encroachment, and the tenant may be permitted to have a perfectly free sale.

Some persons object to a free sale, on the ground that the in-coming tenant may pay too much, and that he will then, in fact, be liable to a rack-rent for his land. This rack-rent is said to consist of the actual rent payable to his landlord, and of a reasonable interest on the purchase-money which he paid. But to call this a rack-rent is an abuse of language. My neighbour, Lord B——, has a good estate of £10,000 a year all held in fee-simple. I would not say that he held this at a rack-rent because his grandfather bought it at thirty-seven years' purchase.

The tenant who has purchased his farm is in quite a different relation to the State from the man who holds at a rack-rent. The latter is steeped in poverty, and has very little hope of improving his condition; if he works hard it is more for the landlord's benefit. He is open to every revolutionary suggestion, as he feels that he could not lose much by any derangement of the established order of things.

But the man who has bought a good interest in a farm can live in comparative comfort. He also lives in hope, as he feels that all his labour adds to his own wealth. He has a stake in the country, which he does not value the less because he has paid a high price for it.

The reasons which are said to induce tenants to pay too high rent do not exist in the case of a purchase. The first reason is that the tenant in possession will often submit to the increase of rent rather than incur the loss and inconvenience of a remove, but, in the case of a purchaser, this motive points in the opposite direction.

Another reason is that a farmer sometimes offers too high a rent, hoping that if he obtains possession of the land he may

obtain a reduction of his rent by petitions or remonstrances to his landlord. But the purchaser of a tenant's interest has not the faintest hope that the seller will ever give him back any part of the purchase-money.

Another difference is that a purchase is a ready-money transaction, while the lease is a case in which long credit is given.

In order to estimate the annual loss which the purchaser suffers by parting with so much of his capital, we should know what use he was likely to make of it, if he had retained it. If the purchase-money is £1,000, we might estimate the loss at £100 a year, if we believed that it was within the capacity and knowledge of the tenant to find a good security, giving him ten per cent. interest. But if he is likely to keep it in an old stocking, or to lend it to a neighbour, he will find it safer, and more profitable, to pay even a high price for a farm. On the whole, therefore, the third F seems to me the F which least requires to be qualified or restricted.

II.

THE LAW AND CUSTOM OF PRIMOGENITURE.

BY THE HON. GEORGE C. BRODRICK.

CHAPTER I.

HISTORY OF PRIMOGENITURE.

THE right of Primogeniture, the most distinctive feature of the English family system, is partly the creation of law, and partly the growth of custom. It is the growth of custom, so far as it has its origin in the voluntary action of feudal lords in making grants of land to be held by knight-service, and so far as it now depends on the preference given by parents to eldest sons in wills and settlements of property. It is the creation of law, so far as it is the fixed rule of succession to landed estates in case of intestacy; and so far, moreover, as the custom which prevails in wills and settlements has been determined or favoured by the law. The practice of entailing, which is often associated or confounded with the right of Primogeniture, is theoretically quite independent of that right, since it would be as easy and as consistent with legal principles to entail an estate upon the youngest son as to entail it upon the eldest son. Again, the power of settling is theoretically altogether distinct from the power of entailing, since it extends to personality as well as to land, and might be employed to keep land tied up, though entails should be abolished by law. Practically, however, settlements are the medium through which the entailing power is exercised, and form a powerful bulwark of Primogeniture, inasmuch as they enable successive heads of families owing to it their own position, to secure its maintenance far into the lifetime of an unborn generation.

The so-called Law of Primogeniture, applicable to inheritance of land *ab intestato*, is thus stated in "Blackstone's Commentaries":—"That the male issue shall be admitted before the female, and that, when there are two or more males in equal degree, the eldest only shall inherit, but the females altogether." The right of Primogeniture, then, in the descent

of land, exclusively belongs to eldest sons, and has no place among daughters. This fact, in itself, has a material bearing on its historical origin. The luminous researches of Sir H. Maine into ancient law tend strongly to support the opinion of Blackstone and other authorities, that we owe this institution to feudal society, not in the earlier, but in the later stage of its development. "Primogeniture did not belong to the customs which the barbarians practised on their first establishment within the Roman Empire." It was, indeed, directly at variance with the principles of equality which appear to have regulated all the primitive communities whose organisation, but lately revealed to historical students, furnishes the key to so many social problems otherwise insoluble. Even the patriarch, though lord of the family possessions, "held them as trustee for his children and kindred." The male children were recognised both in German and Hindoo jurisprudence as "co-proprietors with their father, and the endowment of the family could not be parted with, except by the consent of all its members." Still less had the eldest son any advantage over the rest, either in those primeval family groups which held their domains in joint ownership, or under that more advanced system of land tenure, where partitions took place on the death of a parent, according to rules indicated by Tacitus with his usual pregnant brevity: "*Hæredes successoresque sui cuique liberi, et nullum testamentum: si liberi non sunt, proximus gradus in possessione, fratres, patruī, avunculi.*" Sir H. Maine, after summing up the evidence on this part of the subject, concludes that "an absolutely equal division of assets among the male children at death is the practice most usual with society at the period when family dependency is in the first stages of disintegration."

This conclusion, mainly founded on the legal history of Germany and India, is further confirmed by the great customary of Ireland, known as the Brehon Code, which not only adopts the rule of equal division, but extends the right of inheritance to bastard children. It is hardly necessary to state that a like rule, but applying only to legitimate sons, was established by the Anglo-Saxon custom of gavelkind, which still prevails, as of common right, over the greater part of Kent, and in a qualified form, governs the descent of copyhold lands in some other parts of the kingdom. The Athenian law of succession, under the Solonian constitution, was the same in all

essential respects with the Anglo-Saxon. All the sons inherited equally, upon the death of their father, and the only privilege reserved to the eldest was that of exercising the first choice in the division. The right of Primogeniture, as Blackstone observes, seems to have been maintained by the Jews alone, among the oldest races whose laws are known to us; and even the Mosaic law assigned no more than a double portion to the eldest son, while the "birthright" of pre-Mosaic times, as appears from the case of Reuben, might be set aside by the father.

It is equally certain that Primogeniture is not derived from Roman law—the real fountain-head of so many institutions and ideas once supposed to be indigenous. According to Roman law, "when the succession was *ab intestato*, and the group (of co-heirs) consisted of the children of the deceased, they each took an equal share of the property; nor, though males had at one time some advantages over females, is there the slightest trace of Primogeniture." Intestacy, it is true, was rare among the Romans; but Sir H. Maine has given cogent reasons for believing that Roman wills, so far from being made for the purpose of accumulating property upon one representative of the family, were usually made for the contrary purpose of dividing the inheritance more equitably among all the children, and defeating the rule which excluded sons already emancipated from succession *ab intestato*.

We may assume, then, with as much confidence as is possible in inquiries of this nature, that Primogeniture is essentially a feudal institution. It cannot be traced back to an age preceding feudalism; it was fully established in those countries, and those only, which are known to have adopted the feudal system, and it has been abandoned, for the most part, by those countries which have undergone a complete de-feudalising process. Moreover, though we are unable to specify the exact mode whereby this innovation was accomplished in the Dark Ages, we are able to account for it completely by the peculiar circumstances of that warlike and chaotic period. "While land," says Adam Smith, "is considered as the means only of subsistence and enjoyment, the natural law of succession divides it, like them, among all the children of the family; . . . but when land was considered as the means, not of subsistence, merely, but of power and protection, it was thought better that it should descend undivided to one." Such

is the true historical explanation, as it is also the sound economical explanation, of the rise of Primogeniture. In ancient Rome, no less than in ancient Athens, the State was everything and the individual nothing; public rights dwarfed and overshadowed private rights; and family pride, intense as it was, could not indulge the passion of territorial aggrandisement, lest it should encounter the fierce jealousy of the republican spirit. In communities of the Oriental and old German type, different causes produced the same effect: land was regarded as "a means of subsistence" for all the members of a primitive family or village, and the idea of vassals or tenants holding under a lord could scarcely have been conceived. Even when the German tribes first conquered the Roman Empire, there is reason to believe that equality was the general principle of division. Each great chief, however, naturally received a larger share, and, being unable to cultivate the whole of it for himself, granted a part to retainers on conditions of military service. It is from grants of this kind, and from "honorary feuds" to which titles of nobility were attached, that Primogeniture, as a rule of succession, is held by most jurists to have directly sprung. The original grantee of a fief, unlike the owners of "allodial" property, was indebted to no family law for his new possession. He derived it solely from the bounty of his chief, whose interest it was that it should always be held by some person capable of serving in war, as well as of discharging the less definite obligations, in lieu of rent, which afterwards became regular legal incidents of tenure in chivalry. In most instances the eldest son would be the one most capable, on the father's death, of undertaking his feudal liabilities; but this was not the only reason why Primogeniture gradually superseded joint ownership and equal division. In those wild and unsettled times, it was as necessary for the family as for the lord that it should have one acknowledged head to govern it, one standard round which all its members and dependants could rally, one judgment-seat to which all disputes could be referred. The disorganised state of society compelled a recurrence to something like the patriarchal system of family government; but whereas that system had developed into the rule of equal inheritance, feudalism, under a different order of conditions, became the parent of Primogeniture.

The eldest son, therefore, was invested with his exceptional

privileges under the feudal system, not because he was supposed to have any exceptional rights, but rather because he was supposed to be the most eligible for the performance of exceptional duties. He was not, however, invariably preferred; and we know that merit had far more to do with inheritance in the first age of feudalism than it has with succession to estates or titles in our own days. The Crown itself was then, in some degree, elective in every feudal monarchy; and it is more than probable that fiefs, like the chieftainship of Scotch and Irish clans, sometimes descended to younger brothers and sometimes to uncles. When they descended, as they usually did, to eldest sons, they assuredly brought with them far heavier burdens and far more limited rights of proprietorship than we are wont to associate with the position of a landowner. The life of a German baron under the Othos, or of a Norman baron under the Conqueror and his immediate successors, was a life of incessant toil and anxiety, seldom relieved by leisure or enjoyment; and the younger brother who had entered a monastery, or turned soldier of fortune, had perhaps little cause to envy the lord of several castles, whose revenues, paid in kind, were devoured by hungry and turbulent retainers.

It is impossible to fix the precise year, or even the precise reign, in which Primogeniture was substituted for gavelkind in the common law of England. Blackstone regards this feature of mature feudalism as introduced by the Conqueror; yet the Conqueror himself sanctions descent by gavelkind in the charter which he granted to the City of London. Under the so-called Laws of Henry I., the eldest son had no pre-eminence beyond the right of appropriating the "capital fee," held by military tenure;* and, so late as the reign of Henry III., socage fees, the relic of the old Saxon boc-land, continued to be partible among the male children. Glanville, writing in 1187-9, speaks of Primogeniture as if it were fully established on estates held by knight-service, and were spreading, though only as a local custom, on socage estates. By the year 1200, however, the general presumption was held to be in favour of Primogeniture; and this rule of descent had become almost universal, except in Kent, by the end of the thirteenth century, by which time also the custom of entailing, in its most ancient form, was already established. Entails created in this form

* The current interpretation of this passage is disputed by Mr. Kenny. ("Essay on Primogeniture," p. 167.)

conferred no indefeasible right of inheritance. When a fee was granted to a man "and the heirs male of his body," it was held that, upon the birth of a son, the grantee might sell the land, or charge it with encumbrances, or forfeit it by treason, so as to bar the interest of his own issue. If he did none of these acts, however, it would descend according to the express terms of the grant, for he could not devise it by will. It has been doubted whether tenants of the crown ever possessed the full liberty of selling, though others have considered this liberty as characteristic of true feudalism, which denied the son any vested right in the estate so acquired by the father. According to this view, the famous statute *De Donis* (13 Edward I., cap. 1), by which the succession of the issue, and the ultimate reversion of the donor on failure of issue, were secured against the risk of being defeated by alienation, was a legislative encroachment on feudal principles, and a part of the same policy which afterwards carried the statute *Quia Emptores*. The entails made under *De Donis* created, in fact, a perpetual series of life estates, and are stigmatised in a well-known passage of "Blackstone's Commentaries:"—"Children grew disobedient when they knew they could not be set aside; farmers were ousted of their leases made by tenants-in-tail . . . creditors were defrauded of their debts . . . innumerable latent entails were produced to deprive purchasers of lands which they had fairly bought . . . and treasons were encouraged, as estates-tail were not liable to forfeiture longer than for the tenant's life." The fact of such consequences having resulted from indefeasible entails has never been disputed. It is significant that, when the absurd technical device of a "common recovery" was invented to break them, in the reign of Edward IV., Parliament took no steps to counteract it, and even expressly legalised disentailing by "fines."* Nevertheless, there is good reason to doubt whether the greater part of England was ever subject to entails under *De Donis*, and whether that system ever came into general use before the Civil Wars of the seventeenth cen-

* "Taltarum's case," establishing the right of breaking an entail by a collusive action, was decided in 1472. By the statute 4 Henry VII., cap. 24, the alternative method of terminating entails by "fines" was legally sanctioned. By the statute 26 Henry VIII., cap. 18, estates-tail were deprived of their immunity from forfeiture, on conviction for treason; by 32 Henry VIII., cap. 18, tenants for life were enabled to grant leases, on reasonable terms, which would bind their issue-in-tail; by 33 Henry VIII., cap. 39, all estates-tail were made liable to Crown-debts, secured by record or special contract.

tury, soon after which the lawyers found means to defeat it. We must remember that wills of land, by which modern entails are often created, were not then permitted by common law, and that even devises of land, by means of "uses," which held good in equity, are believed to date from the early part of the fifteenth century. Entails must, therefore, have been created during the fourteenth century by deed, and, as the device of successive life estates followed by remainders in tail had not been invented, there was no recognised method whereby a landowner could entail an estate, and yet reserve to himself the possession of it. Indeed, the frequency of lawsuits concerning land in the fifteenth century is some proof of its frequently coming into the market. On the other hand, in days when personalty was extremely scarce, wills of land very rare, and settlements unknown, the law of Primogeniture, causing fee-simple estates to descend like entailed estates, must have operated to an extent, and with a severity, which is happily difficult to conceive in the present age.

By the end of the Tudor period the practice of breaking entails by means of "common recoveries" had already become well established, and must have brought many estates into the market. The same object was deliberately facilitated by the statute passed in the reign of Henry VII., which authorised a tenant-in-tail to bar his own issue by a simpler proceeding known as a "fine." It has not been sufficiently realised that, during the period between the introduction of these methods for disentailing, and the institution of family settlements in the seventeenth century, the ownership of landed property in this country was practically more absolute and the disposition of it less restricted than it had been for two centuries before, or than it has since become. Each successive tenant-in-tail, by levying a fine or suffering a common recovery, was able to convert his estate into a fee-simple, and, as the use of life-estates in tying up land had not been discovered, the head of a family was usually in this position. It is impossible not to connect the rapid growth and singular independence of the English gentry under the Tudors and Stuarts with the limitation of entails and freedom of alienation which characterised this remarkable period. Many of the humbler yeomen may have been crushed out or bought out in the process of forming parks or turning arable into pasture farms, and may ultimately have sunk into the condition of the labourer.

But the yeoman class, as a whole, assuredly occupied a very much larger space in country life, as country life was a far more important element in national life than it is easy for the present generation of Englishmen to conceive.

In course of time, however, family pride, aided by lawyers, contrived new expedients for checking alienation by sale or subdivision by will, and placing the right of Primogeniture on a secure basis. The first of these expedients in logical, if not in chronological, order, was the mere substitution of such words as "first son" or "eldest son" for "heir of his body" in deeds of settlement. The legal effect of this was, that instead of the father taking an estate-tail under the settlement, which he might have forthwith converted into a fee-simple, he took only a life-estate, and had no control over the remainder (whether for life or in tail) given by the same instrument to his eldest son. This idea was developed by conferring, so far as possible, life-estates instead of estates-tail on the whole first generation of persons included in a family settlement; so that, whereas a tenant-in-tail once in possession could not be deprived of his power to become master of the property, the acquisition of this power might be deferred to a second, or even to a later generation. But, for reasons known to lawyers, that object could not have been accomplished effectually without a further expedient devised by Sir Orlando Bridgman and Sir Geoffrey Palmer during the Civil Wars, and generally adopted after the Restoration. This was the notable contrivance of "trustees to preserve contingent remainders," of which it is enough to say that it protected the interests of tenants-in-tail against the risk of being defeated by the wrongful act of preceding life-tenants. From this epoch, rather than from "Chudleigh's case," which is cited by Lord Bacon, must be dated the modern type of settlement. Still, the principle was maintained that an entail might be cut off by a tenant-in-tail of full age, though it was technically necessary for him, unless in possession, to obtain the concurrence of the person (generally his own father) in whom the immediate freehold was vested. This principle was violated by the Legislature for the first time, as Mr. Neate shows, in the great Act of William IV., which created the "protector of the settlement." Since this Act it has been a positive rule of law, and no longer a mere technical necessity, that, when a tenant-in-tail under a settlement wishes to bar the

entail completely, he must obtain the consent of the "protector," that is, in legal phrase, of the person who has the first estate of freehold prior to his own estate-tail.

CHAPTER II.

PREVALENCE AND OPERATION OF PRIMOGENITURE.

WE are now in a position to review the actual operation of Primogeniture in this country, whether under the express terms of settlements and wills, or by virtue of the law prescribing the course of descent on intestacy. Unfortunately, the statistical materials requisite for such a review are still very imperfect. Among our Anglo-Saxon forefathers, transfers of land were publicly witnessed, after proclamation openly made in the shire-mote, or county-court—a primitive but effective substitute for a modern registry of title or assurances. For centuries after the Conquest, the publicity of "feoffments," and the "inquisitiones post-mortem" taken on the death of all tenants holding by knight-service from the Crown, kept alive evidence of conveyances or succession for a very large proportion of English properties, which might have been embodied in periodical revisions of Domesday Book.* It was not until private and unregistered deeds, couched in the jargon of legal pedantry, had finally superseded the old simplicity of land-transfer and land-succession, that "real property" became the stronghold of conveyancing mystery, and transactions relating to land ceased to be the subject of public notoriety or interest. At this moment the statistical materials requisite for a record of English land tenure, as affected by the Law and Custom of Primogeniture, are still very imperfect. No register of settlements, conveyances, or mortgages exists as yet for any part of England, except Middlesex and Yorkshire, though such a register has existed in Scotland a century and a half, and is admitted to answer its purpose admirably. Accordingly, very conflicting estimates have been formed of the proportion which settled bears to unsettled estates, though many settlements, and

* The compilation of Domesday Book itself is supposed to have been facilitated by reference to the books of the Anglo-Saxon county courts.

those not the least unjust or capricious, are made by will. Wills, it is true, are preserved, but they do not show the extent of land devised by them; nor is there any means of ascertaining, with any approach to accuracy, how far they are employed to aggravate, and how far to mitigate, the inequality arising from the custom of settling landed estates upon eldest sons. It might have been expected, however, that a complete record of the land devolving annually under the common law rule of descent would be kept for State purposes and public information. Instead of this, no distinction appears to be drawn between land which passes by will and land which passes by settlement, being equally chargeable with succession duties; while, for a like reason, no separate account is published of land transmitted to heirs by the law of intestate succession. We are, therefore, thrown back on secondary evidence, such as the facts and professional opinions collected by Royal Commissions or Parliamentary Committees, for the means of estimating the dominion of Primogeniture over the land-system and social life of England.

It has frequently been asserted, and is widely believed, that a mere fraction of the land which yearly changes hands on death is governed by the law of intestate succession. There are no adequate means of verifying or disproving this assertion, but there are good reasons for distrusting it. There is scarcely a wealthy or noble family of any considerable antiquity in which the estates have not at some time descended to an heir or coparceners by the effect of this law. Such an event, however, is far more likely to happen in families less habitually guided by the advice of solicitors, and accustomed to dispense with marriage-settlements. The savings of shopkeepers in country towns are very often invested in the purchase of villas or small plots of land, and such persons very often omit to make a will, being perfectly satisfied with the distribution of personalty or intestacy, and never having realised the responsibilities of a landowner. What is really true is that landowners, conscious of these responsibilities, seldom deliberately intend to die intestate, and that most descents by operation of law are the result of negligence or misadventure. It is not every layman who can be expected to know that, whilst most shares in railways and canals are personalty in the eye of the law, New River shares are invested with the character of real property; or that, while a lease for 999 years is personalty, a lease for life,

though it be the life of another, is realty.* But it is not only through ignorance of the common law rule that land is left to descend upon a single legal "heir." A man, perhaps, makes several contradictory wills, all of which prove to be void for want of proper attestation, or by reason of his incompetence; or he makes a good will so worded that it does not cover the whole of his real property, including that which he may have contracted to buy; or, having recently purchased a small freehold, he is just about to devise it, when he is suddenly cut off. Moreover, intestacies may easily escape public observation, even when they occur in wealthy families. The known wishes of an intestate may be carried into effect by arrangement within the family, or an amicable suit in equity, without the public becoming aware of the fact, especially if those wishes should nearly coincide with the course of descent at common law. Several notable examples of the contrary kind, where the known wishes of the intestate, and the plain requirements of justice, were flagrantly violated by the law of intestate succession, have been cited by Mr. Locke King and others in parliamentary debates.†

Upon the whole, then, we may conclude, with Mr. Joshua Williams,‡ that "the property which descends to heirs under intestacies, though large in the aggregate, is generally small in individual cases," where, however, it often works grievous hardships. Those who suffer by it are usually persons for whom no other provision has been made, and members of a class to which the idea of making an eldest son, and beggaring the rest of the family, would be utterly repulsive. The direct effect of the Law of Primogeniture in keeping together great estates, and aggrandising the heads of great families, is probably not very considerable. Its indirect effect on the minds of testators and settlors cannot be measured by any indefinite test, but reason and analogy would certainly lead us to believe that it has been a most powerful agent in moulding the sentiment of the class by which the custom of Primogeniture is maintained. From this point of view, it is certainly a significant fact that no

* See Laurence's "Essay on Primogeniture," sect. vi.

† In one of these cases, a man in humble circumstances, having no children, had employed the fortune of his wife, with her full concurrence, to buy the house in which they lived; after which he died intestate, a nephew claimed and obtained the property, and his widow, left destitute, was reduced to work as a menial servant.

‡ "Personal Property," p. 402.

sooner was the Law of Primogeniture swept away in the United States than equal partibility became the almost universal custom, notwithstanding that American landowners are by no means destitute of family pride, and enjoy very nearly the same liberty of devising or settling their estates as an English proprietor.*

It is still more instructive to observe that personal property in this country, being exempt from the Law of Primogeniture, is little affected by the custom, save when it is thought necessary to accumulate the lion's share of it on the eldest son, that he may the better keep up the dignity of a family place. On the contrary, ordinary wills of personalty closely follow the Statutes of Distributions, under which the "next of kin" are placed in the same position as "the heir" under the Law of Primogeniture. Rich capitalists, who do not invest in land, or aspire to found a county family, seldom make an eldest son, and of those who do indulge in this ambition, some prefer to buy a moderate estate for each of their sons. Still more habitually is equal division recognised as the dictate of natural equity by the great body of merchants, tradespeople, and professional men, as well as by the labouring classes throughout Great Britain and Ireland; in short, by the middle and lower orders of society, divorced from the soil in this country, and by the landless members of the upper orders. Nor must it be forgotten that, by English law, ordinary leaseholds, whether they consist of lands or houses, count as personalty, and are distributed as such on intestacy; whereas money in trust for investment in land counts as realty, and falls under the same rule of inheritance. Vast leasehold interests are constantly included in settlements of personalty; and few of these settlements, whether made on the marriage of a duke's younger son or on the marriage of a shopkeeper, exhibit any bias towards Primogeniture. In most instances, the funds are directed to be invested for the benefit of all the sons and daughters of the marriage equally, though a power is usually reserved to the parents of modifying this distribution by "appointment," at their own discretion. The same course is generally followed by testators possessed of small landed estates purchased with their own earnings, who, for the most part,

* See Kenny's "Essay on Primogeniture," pp. 64-5; and Mr. Ford's "Report on Land Tenure in the United States," presented to Parliament, with similar reports from other countries, in 1869-70.

devise their land to trustees for sale, and direct the proceeds to be divided among their children. In families of the yeoman class, the ordinary practice appears to be that hereditary property should go to the eldest son, but that, in accordance with the Scotch rule of *legitim*, younger children should be compensated, so far as possible, for their disinherison, and that, if burdened with mortgages, the land should be sold for the equal benefit of all. Even the rude wills and settlements drawn up by priests or schoolmasters for Irish peasant-farmers, among whom the instincts of proprietorship are cherished in their intensest form, embody the principle of gavelkind and not of Primogeniture. Though often destitute of any legal validity, and purporting to dispose of an interest which has no existence in law, they usually disclose a clear intention to place the younger children on a tolerably equal footing with the eldest son, either by the subdivisions of which Irish landlords complain so much, or by heavy charges on the tenant-right.

It may, therefore, be safely affirmed that Primogeniture, as it prevails in England, has not its root in popular sentiment, or in the sentiment of any large class, except the landed aristocracy and those who are struggling to enter its ranks. By the great majority of this class, embracing the whole nobility, the squires of England, the lairds of Scotland, and the Irish gentry of every degree, Primogeniture is accepted almost as a fundamental law of nature, to which the practice of entails only gives a convenient and effectual expression. Adam Smith remarks that "in Scotland more than one-fifth, perhaps more than one-third, part of the whole lands of the country are at present supposed to be under strict entail"—that is, entailed under a system, introduced in 1685, which barred alienation far more inexorably than was permitted by the English rule against perpetuities. Mr. McCulloch, writing in 1847, calculated that at least half Scotland was then entailed; but an Act passed in the following year facilitated disentailing by provisions borrowed from the English law.* In England,

* See Laurence's "Essay on Primogeniture," pp. 67-68. By the Act of 1848 (11 and 12 Vict., cap. 36) tenants in possession were enabled to bar entails with the consent of all the remaindermen, if less than three, or of the three remaindermen next in succession. Under a subsequent Act (38 and 39 Vict., cap. 61, sec. 5), on an application to the Scotch Court to disentail an estate held by tailzie, dated prior to August 1, 1848, the court may dispense with any consent thus required by the former Act, except that of the immediate heir or first remainderman. But it was provided that the value in money of

where so much land is in the hands of corporations or trustees for public objects, and where almost all deeds relating to land are in private custody, we cannot venture to speak with so much confidence on this point. Considering, however, that in most countries large estates predominate over small, and that large estates, by the general testimony of the legal profession, are almost always entailed either by will or settlement, while small estates, if hereditary, are very often entailed, there is no rashness in concluding, in accordance with the evidence given before Mr. Pusey's Committee, that a much larger area is under settlement than at the free disposal of individual landlords.*

It is well known that in families which maintain the practice of entailing, the disparity of fortune between the eldest son and younger children is almost invariably prodigious. The charge for the portions of younger children, when created by a marriage settlement, is created at a time when it is quite uncertain how many such children there will be. It is rarely double of the annual rental, and often does not exceed the annual rental; indeed, in the case of very large estates, it may fall very far short of it. In other words, supposing there to be six children, the income of each younger brother or sister from a family property of £5,000 a year will consist of the interest on a sum of £1,000, or, at the utmost, of £2,000; and even if there were but one such younger child, his income from the property would probably not be more than one-twentieth or one-thirtieth of his elder brother's rental. Nor does this represent the whole difference between their respective shares of the family endowment; for the eldest son, who pays no probate duty, finds a residence and a garden at his disposal, which he may either occupy rent-free or let for his own private advantage. Of course, where a father possesses a large amount of personalty, he may partially redress the balance; and there are exceptionally conscientious landowners who feel it a duty to save out of their own life incomes for younger children. But it is to be feared that accumulations in the Funds are too often employed, not exclusively nor mainly to increase the pittances allotted for portions, but on the principle of "To him that hath shall be given," to relieve the land of some outstanding incumbent expectancies or interests in the entailed estate should be ascertained, and paid into Court or duly secured.

* The estimates given before that Committee represented the estates then under settlement as exceeding two-thirds of the kingdom. Others have stated the proportion at three-fourths and upwards.

brance, and to aid the eldest son in conforming to a conventional standard of dignity.

It is, indeed, wholly delusive to contrast the Law with the Custom of Primogeniture, as if the harsh operation of the former were habitually mitigated by the latter. The contrary tendency is assuredly far more prevalent in the higher ranks of the landed aristocracy; and the younger members of families in this class would generally have reason to congratulate themselves if the law alone were allowed free scope, instead of being aggravated by the effects of the custom. For instance, in the case last supposed, if a family estate of £5,000 a year were charged with no portions for younger children, but left to descend under the law of intestate succession, each of five younger children would lose £1,000, or, at the utmost, £2,000. But then, if the last owner were possessed of £90,000 in personalty, and this also were left to be divided among the children under the Statute of Distributions, each child would receive a share of £15,000. Suppose, however—and it is no improbable supposition—that portions have been charged for younger children, but that one-third of the personalty, or £30,000, is bequeathed to the head of the family to keep up the place, the fortune of each younger child will be reduced to £12,000, so that he would lose £3,000, and would gain no more than £1,000 or £2,000. But it is not very often that a landowner with a rental of £5,000 a year has £90,000 to leave among his children. The same imaginary obligation to preserve that degree of state and luxury which is expected of country gentlemen with a certain status and acreage offers an obstacle to saving which the majority find insuperable. Besides, nine out of ten men who inherit their estates burdened with charges for their father's widow and younger children would think it Quixotic to lay by out of their available income, as men of business would do, for the benefit of their own younger children. Hence the proverbial slenderness of a younger son's fortune in families which have a "place," and especially in those which have a title, to be kept up. As for the daughters, their rank is apt to be reckoned as a substantive part of their fortunes; and not only are their marriage portions infinitely smaller than would be considered proper in families of equal affluence in the mercantile class, but it is not unfrequently provided that, unless they have children, their property shall ultimately revert to their eldest brother.

We have next to examine the mode whereby the right of Primogeniture is secured in ordinary settlements of landed property, or, less frequently, in the wills of landed proprietors who have enjoyed an absolute power of disposition. This mode is thus explained in the standard work of Mr. Joshua Williams, on the Law of Real Property:—"In families where the estates are kept up from one generation to another, settlements are made every few years for this purpose; thus, in the event of a marriage, a life-estate merely is given to the husband; the wife has an allowance for pin-money during the marriage, and a rent-charge or annuity by way of jointure for her life, in case she should survive her husband. Subject to this jointure, and to the payment of such sums as may be agreed on for the portions of the daughters and younger sons of the marriage, *the eldest son who may be born of the marriage is made by the settlement tenant-in-tail.* In case of his decease without issue, it is provided that the second son, and then the third, should in like manner be tenant-in-tail; and so on to the others; and in default of sons, the estate is usually given to the daughters; not successively, however, but as 'tenants in common in tail,' with 'cross remainders' in tail. By this means the estate is tied up till some tenant-in-tail attains the age of twenty-one years; when he is able, with the consent of his father, who is tenant for life, to bar the entail with all the remainders. Dominion is thus again acquired over the property, which dominion is usually exercised in a re-settlement on the next generation; and thus the property is preserved in the family. Primogeniture, therefore, as it obtains among the landed gentry of England, is a *custom* only, and not a *right*; though there can be no doubt that the custom has originated in the right which was enjoyed by the eldest son, as heir to his father, in those days when estates-tail could not be barred."

To complete this explanation, it should be added that almost all modern settlements contain a power of sale, enabling the trustees, with the consent of the tenant in possession, to sell portions or even the whole of the property, and to re-invest the purchase-money in other land. Under these powers outlying estates, or estates which may have come into the family collaterally, are very commonly sold off, and the produce is either applied in rounding off the central domain, or held upon trust for the same persons as would have received the income of the land, till it is sooner or later absorbed in paying charges

which must otherwise have been raised upon the entire property. In default of such powers being inserted in the settlement, the Court of Chancery may direct sales, with the consent of the parties interested; and it may be asserted that with the exception of a very few domains inalienably settled, like Blenheim, on a particular family, no estate in England is literally unsaleable. It should also be remarked that a settlement of the kind described by Mr. Joshua Williams, implies that full control has been acquired over the land before it is executed. For this purpose, most family properties are disentailed in each generation with a view to re-settlement, by the joint act of the life-owner for the time being as "protector," and of his eldest son as tenant-in-tail in reversion. The former is actuated by a desire to perpetuate the entail by fresh limitations, to a period as distant as the law permits; and often gains, in the process of re-settlement, the means of discharging his own debts, or making provision for those who have claims upon him. The son, on the other hand, taking a life-estate in lieu of his estate-tail, forfeits the prospect of becoming master of the property on his father's death; but in consideration of this sacrifice, he usually receives an immediate rent-charge by way of allowance, and is placed in a position to marry early.

CHAPTER III.

EFFECT OF PRIMOGENITURE ON THE DISTRIBUTION OF LANDED PROPERTY.

To say that Primogeniture, thus organised, has a direct tendency to prevent the dispersion of land, is only to say that it fulfils the purpose for which it was instituted. It is hardly less evident that it must have the further effect of promoting the aggregation of land in a small and constantly decreasing number of hands. The periodical renewal of entails is intended to secure, and does secure, ancestral properties against the risk of being broken up; and, practically, they very seldom come into the market, except as a consequence of scandalous waste or gambling on the part of successive life-owners. The typical English family estate is that which, like Sir Roger de Coverley's, neither waxes nor wanes in the course of generations

and there are still many such estates in counties remote from London. But there is nothing to check the cumulative augmentation of ancestral properties by new purchases of land, which is the darling passion of so many proprietors. There is always some *angulus iste* to be annexed and brought within the park palings or the ring-fence on the first good opportunity ; and scarcely a day passes without some yeoman of ancient lineage being erased from the roll of landowners by the competition of his more powerful neighbour. Not that any tyranny or unfair dealing is involved in this process of aggrandisement, which is the consequence of economical laws quite as simple as that of natural selection in the animal creation. The yeoman sells his patrimony either because he has ruined himself by drinking or improvidence, or because he finds that by turning it into money he can largely improve his income and the future expectations of his family. The nobleman or squire buys it at a price which is not commercially remunerative, either to prevent its being covered with buildings, or because it lies conveniently for his own agricultural designs, or because he wants to extend his influence in the county ; for one or all of which reasons it is worth more to him than to any one else. It is known in some parts of the country that it is utterly vain to bid against the great territorial lord of the district, whose agent is instructed to buy up all properties for sale, regardless of expense. In other parts of the country, men who have made their fortunes in trade are equally covetous of land, which for them is the one sure passport to social consideration, and equally anxious to keep it together by entails. Thus by the normal operation of supply and demand large estates are perpetually swallowing up small estates, while, by a suspension of that operation through the law and custom of Primogeniture, they are themselves preserved, to a great extent, from dissolution. On the other hand, it must not be forgotten that a counter-tendency, no less natural and legitimate, partly neutralises this gravitation of smaller towards larger aggregates of land. The enormous rise in the value of all sites within easy reach of great towns sometimes offers to great landowners an inducement to sell which they cannot resist. In this way, under the powers of sale already mentioned, distant and detached portions of great estates are frequently passing in large blocks into the hands of new landlords, generally of the mercantile class, or are bought up by land-jobbers, and sold, in

petty blocks, to retired tradesmen. At the same time, the acquisition of minute plots by the working classes has been facilitated of late by the agency of freehold land societies, originally established for political objects, and would doubtless prevail to a much greater extent but for the exorbitance of law-charges on small purchases of land.

In default of authoritative statistics, the loosest and vaguest conjectures were long current respecting the division of ownership caused by these divergent tendencies. It was confidently stated, for instance, that, whereas in the latter part of the last century this country was divided among 200,000 landowners, it had come to be divided among no more than 30,000. No proof was thought necessary to support the former assertion; the latter was supported by a proof which, on examination, turned out to be perfectly worthless. In the Occupation Returns of the Census for 1861, only 30,766 persons described themselves as land-proprietors, and these figures were most persistently quoted as official evidence on the subject, in the face of the patent fact that above half of the whole number were females. The probable explanation of this circumstance is, that women owning land feel a pride in recording their ownership; whereas thousands of male landowners returned themselves as peers, members of Parliament, bankers, merchants, or private gentlemen. At all events, the mere existence of so palpable a flaw in the return utterly destroyed its value for the purposes of statistical argument. Equally reckless assertions were made in support of the contrary opinion, and until the year 1876 it was regarded as open to doubt whether the whole body of English landowners, properly so called, amounted to 30,000 or to 300,000.

The appearance of the "New Domesday Book," as it was called, was the first step towards a thorough investigation of this question, which it ought to have set finally at rest. It purported to show that England and Wales, exclusive of the metropolis, were divided in 1874-5 among 972,836 proprietors in all, owning 33,013,514 acres, with a "gross estimated rental" of £99,352,301. Of these proprietors, however, no less than 703,289, owning 151,171 acres, with a gross estimated rental of £29,127,679, were returned as possessors of less than one acre each. The aggregate acreage and gross estimated rental of the 269,547 proprietors owning one acre and upwards were stated as follows :—

	No.	Extent of Lands.			Gross Estimated Rental.	
		A.	R.	P.	£	s.
Total No. of Owners of						
1 acre and under 10 acres	121,983	478,679	2	27	6,438,324	15

This Return, prepared by the Local Government Board, was represented as no more than "proximately accurate," and a very cursory inspection sufficed to disclose errors of detail so numerous and important as to cast suspicion even upon its proximate accuracy. Further analysis of its contents has amply confirmed this suspicion, and although the New Domesday Book contains a mine of precious materials for an exhaustive treatise on the distribution of landed property in England and Wales, the actual figures given in it cannot be accepted, without large corrections, as the basis of any sound conclusions on that subject.

In the first place, it is evident on the face of the Return itself, and we are expressly informed in the Explanatory Statement prefixed to it, that it does not include any property except that assessed to rates. Now, at the date of its compilation (1874-5) all woods, except saleable underwoods, were exempt from rates, and are therefore excluded from the return. Waste and common lands, being equally exempt from rates, were equally ignored in the rate-books from which these statistics are borrowed, although a very rough and untrustworthy estimate of the area covered by them was appended in a separate column. The result is, that whereas the whole area of England and Wales amounts to 37,319,221 acres, only 34,538,158 acres are recognised at all in the New Domesday

Book. Of these, 33,013,514 acres are assigned to landowners great and small, while the "estimated extent of commons and waste lands" accounts for 1,524,648 acres. The remaining 2,781,063 acres comprehend "waste lands the area of which could not be ascertained, woods other than saleable underwoods, rivers and roads, Crown property not let, and churchyards and other lands not rateable." A very large proportion of these woods and plantations—not to speak of manorial rights over commons—must belong to great landowners, the real extent of whose estates is therefore very much understated, by virtue of this omission alone.

In the second place, the exclusion of the whole metropolis, vast districts of which are owned by wealthy peers and commoners, makes the rental of such "ground-landlords" appear much smaller than it really is, as compared with that of less fortunate proprietors. The gross estimated rental of the metropolis, according to a Return of 1873, was nearly £25,000,000, and if to this be added the profits derived by the landlords of England and Wales as a body, from docks, harbours, bridges, and other forms of property ignored in the New Domesday Book, it will easily be understood how largely their gross income exceeds the £99,352,301 with which they are credited. Again, no distinction is drawn between house property and agricultural land, or between copyholds and freeholds, or even between either of these and property held on lease for terms of above 99 years. The effect of this indiscriminate classification is of course mainly felt in the illusory multiplication of small estates; the vast majority of persons returned as "*owners* of less than one acre" were probably the possessors—and, most of them, mere leaseholders—of house-property in towns or suburbs of towns. If proof were needed of this inference, it is supplied by the fact that whereas the average rental of these petty estates, as stated in the Return, is nearly £200 per acre, the average rental of all the estates ranging from one acre upwards does not greatly exceed £2 per acre. A very considerable deduction should be made, on this account, even from the 121,983 estates ranging between one and ten acres, among which must be included a large number of business premises, gardens, and pleasure grounds, destitute of any agricultural value or character. The absurdity of reckoning among landowners the purchasers of such little

plots is sufficiently manifest, but, as Mr. Kay has shown,* it is scarcely less misleading to dignify the greater leaseholders with such a title. It is not only that leaseholds are ultimately returned into the hands of the ground-landlords with all the improvements resulting from the lessee's expenditure, but also that they are subject to an infinite variety of covenants, wholly inconsistent with the sense or reality of proprietorship. No rate-books or parochial returns, however, could effectually distinguish between leaseholds and freeholds. As the overseers and rate-collectors were often compelled to act on hearsay evidence, and as neither owners nor occupiers of land are apt to be communicative respecting the nature of their interest, the probability is that many lessees are improperly entered as owners, especially in the East of England, where leases are more common.

But far graver and more prolific sources of error remain to be considered. We are warned in the official preface that glebe lands and estates known to be the property of corporations or charities are printed in italics; but that names of individuals have often been inserted, by mistake, instead of the public bodies or offices which they represent. Now, there are 14,367 entries of estates belonging to church benefices, charities, and other public authorities in England and Wales, comprising in all 1,449,008, acres. The further deduction to be made from the number of apparent landowners, by reason of the official blunders thus acknowledged, is far greater than might be supposed at first sight. Mr. Arthur Arnold's estimate of 10,000 parcels of glebe land in the 15,000 parishes of England and Wales may probably be excessive, but he certainly quotes very significant facts in support of his conclusion that parochial clergymen own, *virtute officii*, a much larger acreage than is indicated in the New Domesday Book. Having selected casually, by way of sample, the Domesday Returns for the counties of Buckingham, Hertford, and Lancaster, he found, in the first, only five parcels of glebe land marked in italics, but 235 "owners" with the prefix of "Reverend;" in the second, only three parcels of glebe land so marked, but 159 "owners" with that prefix; and in the third, only seven parcels of glebe land, but 186 "owners" with the clerical title.† The inference is irresistible that most of

* "Free Trade in Land," p. 123.

† Arthur Arnold's "Free Land," pp. 8, 9.

these 680 "reverend" gentlemen should be deducted from the list of individual "owners" as being merely in official possession of Church property.

But it is also important to observe that most bearers of a clerical title figure in the Returns as "owners" of small estates, and thus swell the apparent number of yeomen and petty squires, as distinct from great landowners. Let us take, for the sake of illustration, the seven English counties which stand first in alphabetical order. In Bedfordshire there are 15 clergymen returned as "owners" of estates between 300 and 1,000 acres; and 28 clergymen returned as owners of between 100 and 300 acres. In Berkshire there are 19 clergymen returned in the former class, and 21 in the latter; in Buckinghamshire 28 and 54, respectively; in Cambridgeshire 23 and 48, respectively; in Cheshire 11 and 12, respectively; in Cornwall 22 and 52, respectively; and in Cumberland 19 and 33, respectively.* It follows that not only the original enumeration of English landowners, but also the official classification subsequently founded on it,† is vitiated, to a serious extent, by the intrusion of heterogeneous elements. It is at least doubtful whether official representatives of the Church, as well as trustees of charities, hospitals, colleges, and railway companies, ought to be included in a list of "owners" at all; but it is self-evident that, if included, they should be properly identified, and placed in a separate category.

The effect of double entries on the apparent number of landed proprietors is still more deceptive. No attempt, indeed, was made to group together all the estates owned by the same proprietor in different counties, and it seems to have depended on the efficiency of the local compilers whether the estates of one proprietor in one county were entered under one name or several. The consequence of this slovenly and haphazard registration is that, instead of being a perfect record of "owners," the New Domesday Book is, at best, an imperfect record of estates, many of which, as we have seen, belong to public bodies, and many others of which are mere fragments of great properties owned by a single individual. It has been ascertained by Mr. Arthur Arnold that twenty-eight dukes own

* For these figures I am indebted to the kindness of Mr. John Bateman, F.R.G.S., author of "Great Landowners of Great Britain and Ireland."

† "Summary of Returns of Owners of Land in England and Wales," ordered by the House of Commons to be printed, 4th July, 1876.

158 separate estates within the United Kingdom, comprehending 3,991,811 acres; that thirty-three marquises own 121 separate estates, comprehending 1,567,227 acres; that 194 earls own 634 separate estates, comprehending 5,862,118 acres; and that 270 viscounts and barons own 680 separate estates, comprehending 3,780,009 acres. In other words, the names of dukes are repeated 5·6 times, those of marquises 3·7 times, those of earls 3·3 times, and those of viscounts and barons 2·5 times. The Duke of Buccleuch alone counts as fourteen landowners, in respect of as many separate estates in England and Scotland, and four other peers are multiplied in like manner by eleven, figuring, perhaps, as small yeomen in counties where they happen to own but a few acres. Altogether, the 525 members of the peerage stand for upwards of 1,500 "owners" in the New Domesday Book. Mr. Arnold calculates that if all the landed gentry have been multiplied in the same ratio, four-fifths of the soil of the whole United Kingdom must be in the possession of less than 4,000 persons. But, allowing for the fact that few of the lesser gentry can have estates scattered over more than one county, he arrives at the conclusion that four-fifths of the United Kingdom belongs to a body of owners numbering about 7,000.

Before we can accept this conclusion as a safe guide to the distribution of landed property in England and Wales, we are bound to remember how much greater is the average size of properties in the other parts of the United Kingdom. Even if our present inquiry embraced the whole United Kingdom, it might well be contended that, from an agricultural point of view, the vast moors of the Highlands, with the desolate bogs of Ireland, may as legitimately be excluded from the account as the few acres of ornamental ground surrounding a suburban villa. However this may be, we possess sounder, as well as far more instructive, evidence of the proportion in which England and Wales are divided between various classes of landowners, in the Parliamentary Return of 1876, and Mr. Bateman's admirable analysis of the New Domesday Book. From the former it would appear that 5,408 persons are entered as owning estates of 1,000 acres and upwards in England and Wales, "without reference to the fact that some of such owners hold property in more counties than one." From Mr. Bateman's revised list of English landowners it would appear that the New Domesday

Book contains entries of some 1,688 individuals in England and Wales owning estates of 3,000 acres and upwards, with a rental of at least £3,000 a year; and of some 2,529 individuals owning between 1,000 and 3,000 acres each, or deriving a rental of less than £3,000 from estates exceeding 3,000 acres. It follows that the New Domesday Book exaggerates the number of owners above 1,000 acres, at least in the proportion of 5,408 to 4,017. The result of an independent analysis shows that owners of 2,000 acres and upwards are there repeated about 1·7 times, by reason of their having estates in more counties than one. There is good reason to believe that a further deduction of at least 8 per cent. should be made for the names of persons entered twice in the same English county, and a much larger deduction for the names of persons entered twice in the same Welsh county. At all events, it is certain that not more than 4,000 persons, and probable that considerably less than 4,000 persons, owning estates of 1,000 acres and upwards, possess in the aggregate an extent of nearly 19,000,000 acres, or about four-sevenths of the whole area included in the Domesday Book Returns. If we now abstract the owners of between 1,000 and 2,000 acres, who ostensibly number 2,719, and must really number as much as 1,750, we find that a landed aristocracy consisting of about 2,250 persons own together nearly half the enclosed land in England and Wales.* The residue of owners between one acre and 2,000 ostensibly number 249,996, but may be reduced by a proportionate allowance for double entries to 147,657.† This would give a net total of about 150,000 owners above one acre in England and Wales, or less than $\frac{1}{170}$ of the population—a result which corresponds somewhat closely with Mr. Shaw-Lefevre's conclusion that the whole number of landowners, properly so called, in England and Wales, certainly does not exceed 166,000. But since about 15,000,000 acres out of 33,000,000 are owned by about 2,250

* Mr. Kay, in his "Free Trade in Land" (Letter I.), states that "a body of men which does not probably exceed 4,500 own more than 17,498,000 acres, or more than one-half of all England and Wales." He adds that 710 persons own more than one-fourth, that 523 persons own one-fifth, and that less than 280 persons own nearly one-sixth; that 100 persons own 3,917,641 acres, and that sixty-six persons own 1,917,076. These estimates probably err on the side of moderation, no allowance being apparently made for double entries.

† It is true that comparatively few owners of very small estates would appear as owners in more than one county, but, on the other hand, a greater proportion of such owners would probably be entered more than once in the same county.

proprietors, it may be truly affirmed that nearly half the enclosed land in England and Wales belongs to a body numbering but $1\frac{1}{2}$ per cent. of all the landowners, even excluding those below one acre.

A close investigation of the returns for single counties fully bears out these inferences, and places the inequalities of landed proprietorship in a still more striking light. Take, for instance, Northumberland and Nottinghamshire, which stand next to each other in alphabetical order, but differ widely from each other both in agricultural features and in the character of their population. According to the official returns, which are subject, as we know, to a large discount, the number of owners below one acre in Northumberland is 10,036; but they own no more than 1,424 acres between them, so that each possesses, on an average, less than one-seventh of an acre. In Nottinghamshire 9,891 petty landowners rule over 1,266 acres between them, possessing, on an average, one-eighth of an acre apiece. Little more than a fourth of Northumberland and much less than half of Nottinghamshire is in the hands of owners possessing less than 2,000 acres. If we now look at the higher end of the scale the contrast is striking. About three-fifths of Northumberland is in the hands of forty-four proprietors, nearly half is in the hands of twenty-six, and far more than one-seventh is in the hands of one proprietor, the Duke of Northumberland, who has also landed estates in other counties. In Nottinghamshire two-fifths of the whole acreage belongs to fifteen proprietors, and one-fourth to five proprietors. If the division of landed property over England and Wales correspond with the division of landed property in Northumberland and Nottinghamshire, one-half of the whole country would be in the hands of about 1,000 proprietors; and these proprietors, by virtue of their family connections and social ascendancy, would exercise a power far more than commensurate with their acreage.

It would be highly interesting, were it possible, to extract from the New Domesday Book the exact amount of land held by the various classes of society, and, in particular, the amount held by the class of yeomen whose gradual extinction is so often deplored. Unfortunately, the returns furnish no adequate material for an exhaustive classification of this kind, and the apparent owner of a "yeoman's" estate may be either a mere leaseholder or the lord of a great territory in some other county. The careful researches of Mr. John Bateman, how-

ever, enable us to apportion the area of each county, with at least "proximate accuracy," among various orders of landowners, if not among various classes of society. For this purpose he distributes the landowning hierarchy into eight divisions, the first and last of which—Peers and Public Bodies—are defined sufficiently by their mere designation, without reference to acreage. The second division consists of "great landowners" owning above 3,000 acres; the third, of "squires," owning between 1,000 and 3,000 acres; the fourth, of "greater yeomen," owning between 300 and 1,000 acres; the fifth, of "lesser yeomen," owning between 100 and 300 acres; the sixth, of "small proprietors," owning between 1 and 100 acres; the seventh, of "cottagers," owning less than one acre. Of course these descriptions must be accepted in the most general sense, and with many qualifications; but they may serve to denote roughly the several grades of landownership, and to afford an useful basis for a comparison of one county with another.

For instance, if we take, as before, the seven counties which stand first alphabetically—Bedfordshire, Berkshire, Buckinghamshire, Cambridgeshire, Cheshire, Cornwall, and Cumberland—we find very marked differences in the proportionate acreage held by the various divisions of landowners. More than one-fourth of Cheshire, and nearly one-fifth of Bedfordshire, is owned by peers; whereas only one-ninth of Cambridgeshire, and little more than one-tenth of Cornwall, belongs to members of the same class. Less than one-hundredth part of Cornwall, and little more than one-fortieth of Cumberland, is assigned to public bodies, while nearly one-eighth of Cambridgeshire is corporate, and much of this collegiate, property. Coupling together both classes of yeomen, we observe that one-third of all Cumberland, and something like two-fifths of all Cambridgeshire, are in the hands of this class, which, in Cheshire, owns but from one-fifth to one-sixth only of the entire area.

Cambridgeshire, again, stands first in the number of its "small proprietors," between one and 100 acres; but Cheshire far surpasses all the other six counties in the number of its cottagers, who represent nearly three-fourths of its whole proprietary, though possessing less than $\frac{1}{10}$ of its total acreage. The pre-eminence of Cambridgeshire and Cumberland in the proportion of "yeoman" properties might have been anti-

cipated, since the former county offered little attraction to great landowners in early times, and the latter, with the bordering districts of Westmoreland and Yorkshire, is well known as the last stronghold of the primitive "statesmen." But it is a significant fact that even in Cambridgeshire estates of all kinds below 1,000 acres occupy but 59·4 per cent. of the whole returned acreage, and in Cumberland but 57·2. It may be added that in Essex they occupy 55·1 per cent., in Somersetshire about 53; in Lincolnshire 45·8, and in Cornwall 45·1. But the most extreme diversity in the percentage of estates below 1,000 acres is presented by the counties of Middlesex (exclusive of the metropolis) and Northumberland. In the former of these counties, no less than 114,439 out of 143,013 acres are occupied by estates of this class; in the latter, no more than 196,000 acres out of 1,190,043.*

Such figures speak for themselves, and sufficiently indicate the nature of the causes which promote or prevent the multiplication of small properties in modern times. One of these causes has already been fully considered. It has been shown that Primogeniture, operating for many generations, has directly contributed to reduce the landed aristocracy of England and Wales to a body even smaller than had been commonly supposed, but that in those classes which do not maintain the custom of Primogeniture landed property is naturally broken up into a multitude of small parcels. The owner of such parcels are, for the most part, not yeomen, but shopkeepers and artisans, too humble, and too dependent for their livelihood on urban trade and industry, to fill any perceptible place in the rural economy of this country. That economy is so familiar to all of us that we scarcely recognise the peculiar characteristics of it, which foreigners notice as unique in modern Europe. To an Englishman born and bred in the country, it appears the natural order of things, if not the fixed ordinance of Providence, that in each parish there should be a dominant resident landowner, called a squire, unless he should chance to be a peer, invested with an authority over its inhabitants, which, as Mr. Neate contends, "the Norman lords, in the fulness of their power," never had the right of exercising. This potentate, who, luckily for his dependants, is usually a kind-hearted and tolerably educated gentleman, concentrates

* For a fuller discussion of this subject, see Part II. of Brodrick's "English Land and English Landlords." (Messrs. Cassell, Petter, Galpin & Co., 1881.)

in himself a variety of rights and prerogatives, which, in the aggregate, amount to little short of patriarchal sovereignty. The clergyman, who is by far the greatest man in the parish next to himself, is usually his nominee, and often his kinsman. The farmers, who are almost the only employers of labour besides himself, are his tenants-at-will, and, possibly his debtors. The petty tradespeople of the village community rent under him, and, if they did not, might be crushed by his displeasure at any moment. The labourers, of course, live in his cottages, unless, before the Union Chargeability Act, he should have managed to keep them on his neighbour's estate; but this is by no means his only hold upon them. They are absolutely at his mercy for the privilege of hiring allotments at an "accommodation" rent; they sometimes work on the home farm, and are glad to get jobs from his bailiff, especially in the winter; they look to him for advice in worldly matters as they would consult the parson in spiritual matters; they believe that his good word could procure them any favour or advancement for their children on which they may set their hearts, and they know that his frown may bring ruin upon them and theirs. Nothing passes in the parish without being reported to him. If a girl should go wrong, or a young man should consort with poachers, or a stranger of doubtful repute should be admitted as a lodger, the squire is sure to hear of it, and his decrees, so far as his labourers and cottage tenants are concerned, is as good as law. He is, in fact, the local representative of the law itself, and, as a magistrate, has often the means of legally enforcing the policy which, as landlord, he may have adopted. Add to all this the influence which he may and ought to acquire as the leading supporter and manager of the parish school, as the most liberal subscriber to parochial charities, as the patron of village games and the dispenser of village treats, not to speak of the motherly services which may be rendered by his wife, or the boyish fellowship which may grow up between the youth of the village and the young gentlemen at the Hall, and it is difficult to imagine a position of greater real power and responsibility. Yet even this does not exhaust the special advantages and prerogatives attached to the position of an English country gentleman. Until very lately, he alone was lawfully eligible to a seat in Parliament, and even now his class, which may be said to engross the Upper House, predominates conspicuously in the Lower. By this class the whole machinery

of county taxation, county government, and county judicature is regulated and worked. In those of them who may be magistrates is vested *ex officio* a right of taking part in poor-law administration; in their gift is a great variety of lucrative county offices, and the wealthiest magnate of the greatest manufacturing town is "nobody in the county" until he shall have secured their good opinion. That powers so vast and so arbitrary have not been more frequently abused is an honour to our national character; nor can we reflect without some feeling of pride, on the admirable manner in which the "duties of property" are acknowledged and discharged on thousands of English estates. But this must not lead us to idealise this form of rural economy as our forefathers idealised the British Constitution, to ignore the grave defects and anomalies inherent in it, or lightly to dismiss the experience of other nations as inapplicable to our social condition.

CHAPTER IV.

FOREIGN LAND LAWS.

No survey of Primogeniture in England would be complete which should take no cognisance of the land systems inherited or adopted by other civilised nations. Since the famous inquiry of Arthur Young into the agrarian institutions and agricultural state of France, increasing attention has been paid by English economists to foreign customs of land-tenure and land-tenancy. The reports drawn up for the Foreign Office in the years 1869-70, by Her Majesty's Secretaries of Legation in the principal countries of Europe and the United States of America, contain a mine of precious materials on both these subjects. Though specially directed to points bearing immediately on the objects of the Irish Land Bill, they include a large mass of evidence on such questions as the descent of land on intestacy, and the general tendency of various codes to favour the accumulation or dispersion of landed property. Some extracts from the results thus obtained, supplemented by the testimony of independent authorities, may help us to appreciate the unique character of the English Land System, and to forecast the course of its future development.

1. In France, as is well known, "the land is chiefly occu-

pied by small proprietors, who form the great majority throughout the country," so that of some 7,500,000 proprietors, about 5,000,000 are estimated to average six acres each, while only 50,000 average 600 acres.* This *morcellement* is the direct and foreseen consequence of the partible succession enforced by the Code Napoléon, under which all children inherit the bulk of their father's property equally, without distinction of age or sex, a testator with one child being allowed to dispose of half, a testator with two children of one-third only, and a testator with three children of one-quarter.† The dismemberment of estates thus produced is stated to be progressive. "With some rare exceptions, all the great properties have been gradually broken up, and even the first and second classes" (averaging 600 and 60 acres respectively) "are fast merging into the third."‡ This statement, however, must be taken with some qualification. In France, as in England, the ostensible number of very small properties is magnified by the inclusion of little plots surrounding dwelling-houses, of market-gardens, and of fields in which a cow or horse may be kept by persons either mainly supported by wages or engaged in non-agricultural callings. The number of proprietors is certainly not so great as the number of properties, several of which may belong to one owner; and many of the smaller proprietors are engaged in the cultivation of the vine—a very exceptional branch of agricultural industry, requiring minute attention and incessant manual labour. After all, only one-third of France,

* The distribution of landed property in France is somewhat differently stated by M. Lavergne. Writing before the loss of Alsace and Lorraine, he estimated that 5,000,000 proprietors owned on the average 3 hectares, or $7\frac{1}{2}$ acres, each; that 500,000 proprietors of a higher class owned on the average 30 hectares, or 75 acres, each; and that 50,000 great proprietors owned on the average 300 hectares, or 750 acres, each. This classification is followed in the text as the more trustworthy.

† Under a salutary provision of the French Code, prodigals can be placed under an interdict, and trustees appointed to manage their estates.

‡ According to Mr. G. Gibson Richardson, "the estates that are disappearing are the medium-sized ones, of from 50 to 100 acres; they are eaten into on both sides. A large landowner is glad to add to his estate a small adjoining one; and small owners will give almost any money to put another small bit to what they already possess." He entirely denies that small French landowners must needs become poorer and poorer in each generation, as contrary to experience. "The men make money and buy back land which has been divided, or they do so with the dowry of their wives; the law of succession divides, accumulated wealth unites; small properties increase a little at the expense of large ones, but very much at the expense of middle-sized ones." ("Corn and Cattle-Producing Districts of France," pp. 40, 41.)

exclusive of State domains and communal property, is owned by peasants, with an average of $7\frac{1}{2}$ acres each, and a very much smaller proportion is cultivated by this class, who appear to let their lands freely. Another third part is owned, and apparently cultivated for the most part, by yeomen proprietors averaging some 75 acres each. The remaining third is owned by landlords averaging some 750 acres—some, perhaps, descended from ancient *seigneurs*—whose estates are chiefly farmed by others, and sometimes approach in extent those of great English noblemen.* The average price of agricultural land in France is no less than forty years' purchase, and small capitalists on the whole outbid larger capitalists in the competition for it. Indeed, such is the passion for landed property, that French peasant-owners, like English farmers, will often spend capital which they can ill spare, or borrow from usurers, to extend their little domains. Yet the mortgages on the small properties of France, as stated by M. Lavergne, amount to no more than 10 per cent. on their aggregate value.

It is a very delusive, though very common, error to interpret the statistics which show the distribution of landed property in France as if they implied that nearly the whole of the soil is cultivated by peasant-owners. This error is apparently confirmed by the fact that, out of every hundred farms in France, seventy are cultivated on the "*faire-valoir direct*" system, against twenty-one on the "*fermage*" or tenancy system, and eight only on the "*métayage*" or co-operative system. But if we look at the acreage over which these systems

* These conclusions have lately received a strong confirmation from the exhaustive researches of M. Gimel, *Directeur des Contributions Directes*, the chief results of which have been ably summarised by Mr. Barham Zincke. According to M. Gimel's estimate, founded on the communal assessment lists, the actual number of proprietors in France—including those below one-quarter of an acre—was, in the year 1858, no less than 8,264,795; and the increase between 1835 and 1858 had been 20·37 per cent. A more detailed examination of the statistics relative to four typical departments shows this increase to have been largely contributed by purchasers of sites for houses, with or without gardens, and proves that only one-twentieth of the soil passes into these minute parcels. About one-third of these four departments is possessed by owners of less than 20 acres, one-third by owners of 20 to 100 acres, and one-third by owners of more than 100 acres. It is observed that in one district adapted to cattle-breeding, there is a tendency for peasant-properties to rise to, and stop at, about 25 acres, that being the extent of land most conveniently worked by a single family.

It is curious that Arthur Young, so far back as 1787, supposed one-third of France to be occupied by "small properties," which, however, he does not define,

prevail respectively, we find that more than one-third of France is cultivated under the system of tenancy, thirteen per cent. under that of co-operation, and about half on the farmer-proprietary system, which includes cultivation by yeomen as well as cultivation by peasants.* It is interesting to observe that, as might be expected, most of the corn sent to market in France is produced under the system of tenancy, or *métayage*, and not under that of farmer-proprietorship. The late Mr. G. Gibson Richardson, one of the highest authorities on this subject, estimating the entire wheat-growing area of France at about 17,000,000 acres, explained why the acreable produce of this area should appear to be so far below the English standard, and so far below what it really is. This result arises from a strange inaccuracy in the official method of computation, whereby all the 87 departments, whatever their wheat-growing acreage, and whatever their acreable produce, are treated as units of equal value, and the general acreage is very unduly depressed by the shortcomings of districts wholly unsuitable for wheat. For instance, four departments, with 134,000 acres under wheat, yielding only eleven bushels per acre, count the same as four others with 1,213,000 acres, yielding twenty-five bushels per acre; so that, whereas the average yield of the eight is twenty-three bushels per acre, it is reckoned at only eighteen. Mr. Richardson states that, in the great wheat-growing districts of France—Flanders, Artois, Picardy, Beaune, Brie, and Poitou—the average produce per acre probably exceeds that for the United Kingdom, and on some farms reaches forty bushels.†

There is, however, no doubt that on the whole the acreable produce of wheat in England is greater than in France; only it must be remembered that France has brought under cultivation a much larger extent of its whole area than England, that of this area it devotes five or six times as large an acreage to wheat-growing as England, and that, if this

* Mr. G. Gibson Richardson gives the following statistics of farm occupations in France:—"The cultivated land is occupied by 3,225,877 farms, each under separate management; more than half the number, 56 per cent., are under 12½ acres; a fifth, from 12½ to 25 acres; so that three-fourths of them are less than 25 acres." ("Corn and Cattle-Producing Districts of France," p. 30.)

† See his letters to the *Times* of September 15th and October 20th, 1879, elucidating the statistics furnished in Mr. G. Baden Powell's letter of September 6th.

acreage is less productive than it might be made, the fault lies with French tenant-farmers, and not with French peasant-owners.

Volumes of controversy have not exhausted the arguments either for or against the French law of inheritance, but it is instructive to remark how entirely its opponents have shifted their ground. Mr. McCulloch, writing in 1823, predicted that, under its operation, France must certainly become, within fifty years, "the greatest pauper warren in the world," and share with Ireland the honour of furnishing hewers of wood and drawers of water to other countries. Arthur Young, writing in 1787, had condemned the voluntary subdivision of property on the same ground, and it was long a received opinion that compulsory subdivision of property stimulated the increase of population to a frightful extent. The same law is now attacked, with at least equal justice, as directly contributing to keep the population almost stationary. However this may be, it is a very significant fact that neither under the First Empire nor under the restored dynasty of the Bourbons, nor under the Orleanist monarchy, nor under the Second Empire, nor under the new Republic, has any serious attempt been made to repeal this law, bequeathed to France by the authors of the Revolution. For, as we are truly informed in the report of Mr. Sackville West, drawn up shortly before the Franco-German War, "the prevalent public opinion as to the advantages of the tenure of land by small proprietors is that it has been advantageous to the production of the soil, and has tended to the improvement of the material condition of the agricultural population." It is believed, he continues, that subdivision "conduces to political as well as social order, because, the greater number of the proprietors, the greater is the guarantee for the respect of property, and the less likely are the masses to nourish revolutionary and subversive designs." That it conduces to industry and thrift, is too well known to admit of argument; indeed, the proverbial reproach of the French peasantry is that, in their miserly frugality, they sacrifice all that makes life worth having. But, if they starve themselves, they do not starve the land. M. Lavergne, though fully alive to the possible evils of excessive subdivision, bore witness that, on the whole, the best cultivation in France was that of the peasant proprietors,

and assuredly the richest provinces of France are those in which this class of landowners predominates.*

2. The elaborate report on land tenure in Prussia and the North German Confederation, by Mr. Harriss Gastrell, attests the same preponderance of public opinion in favour of small proprietorship, which is encouraged by the law. "In cases of intestacy the law divides all property, including land, in certain proportions, among widow and children; or equally amongst the children, if there be no widow," and no disposition can deprive the "natural heirs" of their claim to a fixed allotment, sometimes amounting to as much as two-thirds of the whole. Though subject to these limitations, "the custom of making a will is almost universal:" but "the restrictions on land by settlements and the like are much less than in England." Entails are not absolutely prohibited, but the extent of land affected by them in Prussia is said not to exceed one-thirteenth of the whole kingdom, the rest of which is held in absolute ownership, with the amplest facilities of mortgage and sale. The consequence is that in Prussia, exclusive of the Rhine provinces and Westphalia, there were in 1858† 1,300,000 proprietors, of whom 108 only had estates large enough to be rated over £1,500, and only about 16,000 had estates of more than 400 acres, while about 350,000 had estates varying from 20 to 400 acres, and the rest, some 925,000 in number, owned less than 20 acres.‡ Of the smallest proprietors, a large proportion were day-labourers, working occasionally for wages; and the minimum extent of land sufficient to support a man and his family was estimated at from 7 to 20 acres or more, according to fertility of soil and other local advantages. Many of these peasant proprietors, living wholly on the fruits of their own soil, have raised themselves from the rank of day-labourers

* Much valuable information on the effects of the French land laws has been collected by Mr. Kay, in his "Free Trade in Land," chap. x. See also an article on "La Situation Agricole de la France," in the *Revue des Deux Mondes*, Jan. 15, 1880, and Mr. James Howard's treatise on "Continental Farming." Mr. Howard's opinion is not favourable to small farms, the owners of which, he says, "work from sunrise to sunset, doing double the work for themselves they would for an employer, and live far harder than the English peasants." He observes that "the size of farm considered necessary to support a family is about four hectares (ten acres)."

† The report of Mr. Harriss Gastrell was based on the returns for that year.

‡ Mr. James Howard states that "in Prussia there are 900,000 farms under four acres in extent." Probably this estimate includes the Rhine provinces and Westphalia.

into the class of yeomanry which, in modern Prussia, as in old England, constitutes the bone and sinew of the nation. Even the greatest proprietors seldom delegate the work of cultivation to mere tenants, but either farm themselves or manage their estates through bailiffs.* In the Rhine provinces and Westphalia, where the French Laws were introduced at the beginning of the century, the subdivision of landed property is carried so far that each proprietor has but 10 acres on the average. The result is that, as we are told in the report of Mr. R. D. Morier, "the Palatinate peasant cultivates his land more with the passion of an artist than in the plodding spirit of a mere bread-winner."

The Prussian land system, established by a series of legislative acts extending over half a century, and expressly designed to favour the elevation of the peasantry into a body of independent proprietors, has been copied by other States of North Germany. Its effects on the agriculture of Saxony have been graphically described, from personal observation, by Mr. Barham Zincke, whose intimate acquaintance with the agriculture of Switzerland, Central France, and the Channel Islands, gives an additional weight to his remarks. He found the district west and north of Dresden cultivated, for the most part, by yeomen owning farms of about 50 acres each. According to him, the land is kept infinitely cleaner than it is in England, since there are no hedges or ditches sheltering weeds or harbouring vermin. No space is wasted, for the heart of the owner is in the soil, tending every plant with parental care, and regarding every weed as an enemy. Comparatively little is expended in hired labour, and such labour is more efficient than in England, because the labourer works side by side with his employer, and is separated from him by no class distinction. The enormous influx of grain from the Western States of America having reduced the demand for German corn in the English market, the Saxon farmer, like the farmer of New England, has adapted himself to circumstances, and raises a far greater variety of produce than English farmers attempt to raise on a far better soil. Potatoes and other vegetables, poultry, milk, and butter, are exported in large quantities from these sandy plains; where agricultural plants could not live, forest-trees are skilfully planted, and fruit-trees, without the

* See Mr. Shaw-Lefevre's "Freedom of Land," chap. vi., and Mr. Kay's "Free Trade in Land," chap. xv.

slightest protection, line the roads and footpaths, as they do in Switzerland and other parts of the Continent in which the ownership of land is widely diffused.*

3. "Wurtemberg is remarkable as the country where subdivision of land is carried to the greatest extreme," containing as it does some 280,000 peasant owners, with less than five acres each, and about 160,000 proprietors of estates above five acres. Upon intestacy, the land is equally divided among all the children, male and female. The father, however, seems to be allowed full liberty of disposition over the property, so long as a certain moderate portion, defined by law (*pflicht-theil*), is reserved for each child. On the smaller peasant farms, "when, in accordance with the will of the father, one child becomes owner of all the paternal land, an estimate is formed on a footing rather favourable to him, and he compensates the brothers and sisters by equal sums of money. The daughters, however, are more frequently on their marriage allotted an equal share of land; and, as the husband is probably the proprietor of a piece of land elsewhere in the commune, the intersection and subdivision of the land goes on increasing." On the largest farms the custom of Primogeniture has encroached still further on that of equal division. Here the eldest son commonly succeeds to the whole property, "often in the father's lifetime. When the parent is incapacitated by age from managing his farm, he retires to a small cottage, generally on the property, and receives from the son in possession contributions towards his support both in money and kind. The other children receive a sum of money calculated according to the size of the property and the number of children, but which, in any case, falls far short of the sum which they would receive, if the property were equally divided, or even were the law of *pflicht-theil* acted on. They have, however, their home there until they establish themselves independently or take service on another property." Mr. Phipps, who gives this account of the Wurtemberg land system, adds that political economists of that country are now "of opinion that small proprietors, who complete their means of livelihood by industrial pursuits, are the most desirable class to encourage, whereas formerly agriculture on a large scale was considered the most profitable." Precisely the same opinion is recorded by Mr. Bailie, writing

* See an excellent letter on "Agriculture in Germany," by the Rev. F. Barham Zincke, published in the *Times* of August 27, 1879.

on the "Land System of Baden," where property is much subdivided. He states that owners of small freeholds do not differ from the larger proprietors in respect of dwellings, clothing, mode of living, or education; that they realise better returns from the same number of acres; and that, in consequence, large estates and large farms are giving place to small estates and holdings. This change, he adds, is there regarded as tending "to promote the greater economical and moral prosperity of the people, to raise the average standard of education, and to increase the national standard of defence and taxation."

4. In Bavaria, where the land is very much subdivided, Mr. Fenton attests the general prevalence of a custom very similar to that which characterises the larger peasant farmers in Wurtemberg. Except in the Bavarian Palatinate, where the Code Napoléon is in force, the descent and inheritance of land are governed throughout Bavaria by the principles, though not everywhere by the express provisions, of the common law. "A proprietor is bound to bequeath at his death a certain defined portion of his property, to be divided in equal shares among all his legitimate children. That portion must not be less than one-half, if the number of children be five, or more than five; and not less than one-third, if there be four, or less than four, children." Where the property consists of land, and especially if it be a peasant property, the eldest son may, and usually does, retain the whole, paying the rest a pecuniary indemnity for their shares, if the father has not already installed him in possession, as sometimes happens, during his own lifetime. "Amongst that class the almost invariable custom is for the testator to leave the whole of the real property—farmhouse, farm buildings, and land—in the possession of one member of the family, commonly the widow or the eldest son, and that person then becomes responsible to the children for the payment to them of a sum of money corresponding to the value (as ascertained by official appraisement) of their share of the property, the children's share being generally fixed at one-half of the whole, real as well as personal. It is further a universally-understood condition of an arrangement of the nature above described, that the person who remains in possession of the property and becomes its owner, is bound during a certain number of years (after the payment of their shares to all the children) to provide any one or all of them with

board and lodging at the homestead, in the event of their falling into distress from sickness, want of employment, &c." In short, the peasant proprietors of Bavaria, who are admitted to be a thriving class, appear to keep up their family estates with as much tenacity as our own landed gentry, but with a jealousy for the rights of younger children which reminds us of the Irish peasant farmers.

5. In the Austrian Empire, on the contrary, the devolution of all property, real and personal, is regulated by the Civil Code of 1869, by which "no preference is accorded to eldest sons," nor have sons any advantage over daughters; but "an exception exists in the case of family entails (*majorats*)."

Of course, these entails are mainly created on large properties. Whatever be the instrument which constitutes such an entail, Mr. Lytton remarks that it has no legal validity without the special consent of the legislative power. Mr. James Howard notices the existence of a further exception applicable to "peasant-farms," the maximum size of which is 60 acres, and the minimum 15 acres; which exception, however, is no longer sanctioned by law in the Archduchy of Austria itself, though maintained in other parts of the Empire. "In the case of such farms, when a proprietor dies, his eldest son takes the land; and an assessor is called in, who fixes the amount to be paid to the other children." The result of Mr. Howard's inquiries showed that in the Austrian dominions "no class of tenant-farmers exists; all are proprietors, except in a few districts, and rare instances." Nevertheless, a larger amount of agricultural machinery had been exported from England to Austria and Hungary than to any other part of Europe, and it was estimated that in ten years, 1860-70, nearly 2,000 steam threshing-machines had been introduced into the Empire, chiefly for use in Hungary.

6. It is almost superfluous to state that Switzerland is a land of small proprietors, the law of equal division being heartily supported by custom. According to Mr. Mackenzie's report, "the quantity of land usually held by each varies from six to twelve acres, small lots held together, and the larger intersected by other properties;" yet, instead of being pauperised by subdivision, the Swiss are proverbial for successful enterprise in trade both at home and abroad. It is, indeed, difficult to say whether the purely agricultural peasantry of Switzerland, and the operative classes living on their own little freeholds in the manufacturing districts, offer the more remarkable

example of industry and thrift, intelligence and comfort, widely diffused through a whole community. The evidence of this is too overwhelming and too patent to escape the attention even of ordinary travellers, and it may safely be affirmed that if Swiss habits and institutions could be transplanted into England, agricultural distress would almost cease to be possible.

7. In Belgium, *morcellement* has notoriously been carried, under the Code Napoléon, to a greater extreme than in France itself; so that, according to official statistics and estimates cited in the Foreign Office Reports, the average size of estates, deducting woodlands and wastes, might be stated at seven acres; and four-fifths of them did not exceed twelve acres. "The dispersion of land is increased by the system which generally prevails at public sales of dividing real estate into small parcels or lots;" otherwise the properties of small families, sold for the purpose of effecting a more convenient distribution among children, would be constantly passing into the hands of rich families. The works of M. de Laveleye and others have so familiarised the minds of English economists with the effects of the Belgian land system on Belgian agriculture, that it would be superfluous to recapitulate them. It is admitted that Belgian tenant-farmers are ground down by rack-rents, and that even the small Belgian proprietors lead a harder life than many an English farm-labourer. Nevertheless, the fact remains that, under this land system, one of the poorest soils in Europe, fertilised by ten centuries of laborious husbandry, fetches a higher price, acre for acre, if it does not yield a larger produce in grain, vegetables, and meat, than any but the most favoured districts of Great Britain.*

8. In Holland, as we learn from the same Reports, "the law of succession requires the division in equal portions, amongst the children or next of kin, of a major part of every

* See M. de Laveleye's Essay on the Land System of Belgium and Holland, in "Systems of Land Tenure," 1876; Mr. Kay's "Free Trade in Land," Mr. Shaw-Lefevre's "Freedom of Land," and Mr. Thornton's "Peasant Proprietors." See also the Report of Dr. Augustus Voelcker and Mr. H. M. Jenkins on Belgian agriculture, in which its alleged superiority in productiveness is combated. Mr. James Howard, in his treatise on "Continental Farming," adopts the same view. He observes that, in comparing the English with the Belgian stock of cattle, it is often forgotten that many of the Belgian oxen are employed for draught purposes, instead of horses, and that most of the rest are inferior in weight and size to English oxen. Even if draught-oxen be included, he reckons the total quantity of meat raised per acre to be only 98 lbs. in Belgium, against 148 lbs. in England and Wales.

inheritance without regard to its nature or origin, and this is naturally calculated to favour to a great extent the division of landed property. But, on the other hand, there exists a very prevalent desire with individuals to avoid unnecessarily splitting up the paternal estates. It is a common thing for a farmer, whether proprietor or tenant, to have accumulated before his death sufficient movable property, frequently in the funds, to enable him to assign a portion therefrom to one or another of his children." The policy of the law, however, is rather against family arrangements whereby the eldest son may retain all the land and the younger children may be compensated in money, since it imposes an increased tax on successions thus modified by agreement. A very attractive picture of rural life under the Dutch land system is drawn by M. de Laveleye :—"The farmers of Holland lead a comfortable, well-to-do, and cheerful life. They are well housed and excellently clothed. They have china-ware and plate on their sideboards, tons of gold at their notaries', public securities in their safes, and in their stables excellent horses. Their wives are bedecked with splendid corals and gold. They do not work themselves to death. On the ice in winter, at the Kermesses in summer, they enjoy themselves with the zest of men whose minds are free from care." The chief reason assigned by M. de Laveleye for the superior prosperity of Dutch, as compared with Belgian, farmers, is that in Holland landed property has remained almost entirely in the hands of peasants, the savings of townspeople being invested in public securities ; whereas in Belgium there is an eager competition of capitalists for estates, forcing up the price and rent of land to an abnormal extent. But M. de Laveleye's ideal of agricultural felicity in Holland is to be found in the province of Groningen, where much of the land is cultivated under a species of hereditary lease, known as *Beklem-regt*, at a moderate and invariable rent. "This system," he says, "derived from the Middle Ages, has created a class of semi-proprietors, independent, proud, simple, but withal eager for enlightenment, appreciating the advantages of education, practising husbandry not by blind routine and as a mean occupation, but as a noble profession by which they may acquire wealth, influence, and the consideration of their fellow-men."

This description of Dutch rural economy cannot be accepted without some qualification. No doubt the national habit of

accumulation, with the aid of lucrative marriages, enables peasant-owners in Holland to keep their properties together. But the competition of capitalists is not wanting, and the passion for proprietorship often tempts the peasant-owner to invest on new purchases of land, at a ruinous price, capital which might be far more profitably invested in improving that which he already possesses. The leaseholders under the Beklem-regt system are practically owners, subject to a quit-rent, and, though usually excellent farmers, do not appear to enjoy any special advantage, in respect of tenure, over semi-proprietors, holding at fee-farm rents, in various parts of the United Kingdom, and especially in Scotland.

9. The same de-feudalising movement, dating from the French Revolution, and deriving a fresh impulse from the democratic revival of 1848, has profoundly modified the land systems of most other European countries. In Sweden and Denmark the creation of new entails has been prohibited, though some old entails survive, as in Prussia. In Norway the French law prevails, being in harmony with the ancient custom of the country. Yet subdivision has not yet been carried to extremes, very few estates being under 40 acres, and very many above 300 acres, besides a large tract of mountain pasture.* In the Hanse towns, as well as in Schleswig-Holstein, Primogeniture is more countenanced by law; but even where, as in Bremen, the real estate goes to the eldest son on intestacy, the "co-heirs," or younger children, are entitled to be portioned out of it. "In Italy," says Mr. Bonham, "the laws in force tend in every way to favour the dispersion of land," and equal division, without distinction of sex, is the rule of inheritance on intestacy; but a landowner, having children, may leave one-half of his property by will; the other half—*legitima portio*—"cannot be burdened with any conditions by the testator." But the political union of Italy has not yet brought about an assimilation of its various provincial land systems, and it will probably be long before the peasant-ownership of Lombardy displaces the old territorial economy of Sicily. In Greece and Portugal the law of intestacy and the restrictions on testamentary disposition are, in all essential respects, the same as in Italy, producing in both countries a large and increasing subdivision of landed property. Mr. Finlay, speaking of the

* Mr. Thornton's "Peasant Proprietors," second edition, p. 82; quoted by Mr. Kay, "Free Trade in Land," chap. xi.

stationary condition of Greek agriculture, observes—"It is the almost universal rule that each small proprietor possesses a *zeugari*" (or plot requiring two pair of oxen to plough it), "and that each cultivator of national land occupies no more." Mr. Merlin, in his report on Greece, mentions the curious fact that "it is extremely rare for the sons to marry till their sisters are provided for; and this feeling pervades all classes." The active jealousy of Primogeniture and partiality for subdivision exhibited in the recent legislation of Portugal contrasts strangely with the survival of great ancestral properties in Spain. It has, indeed, been carried further than even M. de Laveleye approves in the abolition of a father's right to designate one child as his heir, under the ancient form of Portuguese land-tenure known as the *Aforamento*, which resembles the *Beklem-regt* of Groningen. In Russia, where the land system has been complicated by political and social distinctions between classes, by serfdom, and by the communal organisation, Mr. Michell reports that local usage regulates the descent of peasant properties. The law of intestacy for the rest of the community is based on equal division, giving males a preference over females. "There is no general law of Primogeniture, although, in a few great families, estates have been entailed under a special law passed in the reign of the Emperor Nicholas. In 1713 Peter the Great attempted to introduce a general inheritance in fee of the eldest son; but this was so much opposed to the spirit of the Russian landowners, that one of the first acts of Peter II. was to cancel the Ukase of 1713."

10. Under the land-laws of most States in the American Union, an owner in fee-simple has nearly the same power of disposition as he would possess in this country, but the rule of equal division prevails in case of intestacy. The results of this system, and the reason why they differ so widely from those produced by our own, are succinctly described in the following passages of Mr. Ford's report:—

"The system of land occupation in the United States of America may be generally described as by small proprietors. The proprietary class throughout the country is, moreover, rapidly on the increase, whilst that of the tenancy is diminishing, and is principally supplied by immigration. The theory and practice of the country is for every man to own land as soon as possible. The term of landlord is an obnoxious one. The American people are very averse to being tenants, and are

more anxious to be masters of the soil, and are content to own, if nothing else, a small homestead, a mechanic's home, a comfortable dwelling-house in compact towns, with a lot of land of from 50 feet by 100 feet about it. In the sparsely-peopled portions of the country, a tenancy for a term of years may be said to exist only in exceptional cases. Land is so cheap there that every provident man may own land in fee. The possession of land of itself does not bestow on a man, as it does in Europe, a title to consideration ; indeed, its possession in large quantities frequently reacts prejudicially to his interests, as attaching to him a taint of aristocracy, which is distasteful to the masses of the American people.

"The landowner in the United States has entire freedom to devise his property at will. He can leave it to one or more of his children, or he may leave it to a perfect stranger. In the event of his dying intestate, his real estate is equally divided amongst his children without distinction as to sex, subject, however, to a right of dower to his widow, should there be one. If there are no children or lineal descendants, the property goes to other relatives of the deceased. If the intestate leaves no kindred, his estate escheats to the State in which it is situated. The laws of the different States of the Union regulating the descent and division of landed property on death of owner harmonise to a great extent with each other.

"It may be asserted that the system of land-tenure by small proprietors is regarded in this country with great favour, and that the prevailing public opinion is that the possession of land should be within the reach of the most modest means. A proprietor of land, however small, acquires a stake in the country, and assumes responsibilities which guarantee his discharging faithfully his duties as a citizen. Whilst practically any one man may acquire as much land as he can pay for, yet the whole tendency and effect of the laws of this country are conducive to dispersion and multitudinous ownership of land. The several States and the Government of the United States grant their lands in limited quantities ; and under the laws of descent lands descend to the children, irrespective of sex, in equal shares ; and the laws of partition provide for a division of the lands into as many parts as there are interests, where it can be done without prejudice. In many European countries the sale and transfer of land are so hampered by legal complications, and entail such heavy expenses, as frequently to

discourage such operations. In the United States, on the contrary, the sale and transfer of land are conducted with about the same ease as would be the sale of a watch. Very large quantities of land are seldom held in this country, undivided, by one family for more than one or two generations. It is worthy of remark that in this country the same reluctance is not felt, as in Europe, to parting with family lands."

11. No foreign land system, however, is so interesting or instructive to an English economist as the land system of the Channel Islands.* This land system, founded on ancient custom, is the same as that of France in its essential features, but modified by certain reservations in favour of Primogeniture. In Jersey, upon the death of a landowner, leaving a widow and children, the widow has an indefeasible right to one-third of the income during her life, while the eldest son is entitled to the dwelling-house and curtilage, with about two English acres of his own selection, and one-tenth of the remaining land. Where the estate is less than one acre and a half, the eldest son inherits the whole. In other cases, the residue is divided among all the children, including the eldest, the sons taking equal shares of two-thirds, and the daughters equal shares of one-third, but so that no daughter shall take a greater share than a younger son. In Guernsey the eldest son's right is more restricted, but the other rules of division are similar. Entails were unknown in Jersey, until they were partially legalized by the Crown in 1635, and the practice of entailing has ceased for the last thirty years. Devises of land are only permitted where there are no children. In fact, subdivision is generally prevented by the eldest son buying out the rest, who go into business, sometimes retaining a rent-charge on the family estate.

The total area of all the Channel Islands is about 50,000 acres, but the area capable of cultivation scarcely exceeds 37,000 acres, of which more than one-half is in Jersey. The population of all the islands is about 90,000, and of Jersey about 56,000, being nearly thrice as dense, relatively to acreage, as that of England and Wales. The proportion of the population employed in agriculture is still larger, being estimated at

* See the Report of the Commissioners appointed to inquire into the laws of Jersey, 1861; Mr. Kay's "Free Trade in Land," chapter xii.; Mr. A. Arnold's "Free Land," chapter xvii.; and Mr. Shaw-Lefevre's article on the Channel Islands in the *Fortnightly Review* of Oct., 1879. 1

one cultivator to every four acres in Jersey and Guernsey. The number of landowners in Jersey has been variously stated at 2,500 and 2,300, and the average size of properties is eight or nine acres, but many of the smallest, as in France and England, are market-gardens, or belonging to persons having other means of livelihood. The largest properties rarely exceed one hundred acres in Jersey and fifty acres in Guernsey. Most farms are cultivated by their owners, with an industry and skill which owes less than is supposed to special advantages of soil or climate. Whatever test be applied to it, the agriculture of the Channel Islands must rank above that of almost any country in Europe. If we take the price of land as a measure of its agricultural value, we find that £200 an acre is as commonly given in Jersey as £50 an acre in England—not for residential sites, but for ordinary farms. If we refer to average rent, we find that it ranges from £4 per acre for poor land to £10 or £12 for good land, being four times as high as in England. If we look to expenditure of capital in manure, we find that Jersey farmers do not grudge £20 or £30, or even £40, per acre, in preparing their little plots for crops of early potatoes, some £300,000 worth of which have been exported to London from this island alone in one year. If we judge of success in cultivation by the produce, we find that a much larger quantity of human food is raised in Jersey than is raised on an equal area, by the same number of cultivators, in any part of the United Kingdom. Not only does it support its own crowded population in much greater comfort than is enjoyed by the mass of Englishmen, but it supplies the London market, out of its surplus production, with shiploads of vegetables, fruit, butter, and cattle for breeding. Even wheat, for the growth of which the climate is not very suitable, is so cultivated that it yields much heavier crops per acre than in England; and the number of live stock kept on a given area astonishes travellers accustomed only to English farming. Nor are these only the results of spade husbandry, for machinery is largely employed by the yeomen and peasant-proprietors of the Channel Islands, who have no difficulty in arranging among themselves to hire it by turns.

Considering all these facts, and the absence of any special conditions, such as the close proximity of lucrative markets, to account for the marvellous agricultural prosperity of these islands, we cannot greatly err in attributing it mainly to their

cherished land system. The price of land is three or four times as high as in England, not because it is a "luxury," for the possession of which the great nobleman or capitalist will outbid all competitors, but, on the contrary, because it is more valuable agriculturally to small proprietors than it could be to any other class of purchasers, because there are many such bidders for every lot that is sold, and because the cost of transfer is small. It pays a rent at least four times as high as English land, because those who hire it are themselves small proprietors, cultivate it with their own hands, and apply to it a much larger capital per acre than an English tenant-farmer would think remunerative. It yields an amount and variety of produce which seems fabulous to persons conversant only with tenant-farming on the grand scale, not merely because it is more liberally manured, but also because it is studded with orchards, vineries, and other profitable *hors d'œuvres* of agriculture, which nothing but the magic of property will call into existence. The same lesson is taught by the abundance of the markets, the substantial character of the dwellings even down to the humblest cottages, the magnitude of the public works, the dress and diet of the labouring class, the comparative rarity of pauperism, and other signs which betoken a happy and thriving community. It would be interesting, were it possible, to compare the 37,000 cultivated acres of the Channel Islands with the best specimen that could be selected of an equal area owned by a single proprietor in Great Britain. If the advantage should prove to be on the side of the former, morally and socially as well as economically, it would be for the advocates of the English land system to reconcile this result with their belief in a threefold agricultural hierarchy of landlords, tenant-farmers, and labourers. Perhaps it might come to be perceived that whatever benefit is thus derived from a division of duties is more than compensated by a separation of interests; that a farmer who is his own landlord and his own labourer can dispense with the incessant trouble of supervision and fear of an increased rent; that, upon the whole, three profits fructify most abundantly in one pocket; and that freedom of agriculture, like freedom of trade, must needs promote the greatest happiness of the greatest number.

The conclusions to be drawn from a comprehensive review of foreign land systems may be expressed in a few sentences. No other nation has adopted in its entirety the English right of

Primogeniture—a right which could only have grown up in a thoroughly feudalised society, and which could only have been perpetuated in a country where the feudal structure of society has never undergone any violent disturbance. In those States which have remodelled their jurisprudence on the principles of the Code Napoléon, the eldest son is effectually debarred from engrossing the whole landed property of the family. In other States, which have developed their law of succession independently, parents are allowed to “make eldest sons,” under greater or less restrictions. In no considerable State but our own does the law itself, in default of a will or settlement, constitute the eldest son the sole heir to all the realty, and in no other is the exclusive preference of the first-born, thus consecrated by law, carried to such extreme lengths in family government. No highly civilised people but the English tolerate the dominion of a bygone generation over the greater part of the national soil, under settlements and entails designed to limit the ownership and control the action of living owners. In no other part of Europe, nor in the United States of America, nor in the British colonies, is the division of landed property so unequal, or the predominance of a landed aristocracy so firmly rooted. In no other is the free transfer of land, or the power of mortgaging, obstructed by so many legal impediments, by so great a risk of delay, or by the certainty of so exorbitant a cost. Nowhere else is the land habitually occupied by a class of tenants who hold only from year to year, and cultivated by a class of labourers divorced from the soil and working for weekly wages. It is hardly too much to say that the rural economy of Norway and that of Italy, that of Germany and that of the United States, that of France and that of Australia or New Zealand, differ less from each other than any one of them differs from the rural economy of Great Britain. For every one of these countries—however diverse in respect of their soil, their climate, their history, their population, or their political constitution—has cast off the old shell of feudal land laws, has adopted the principles of Free Trade in Land, and has practically fostered the creation of a farmer-proprietary superseding, more or less, the relation of landlord and tenant. Bearing these facts in mind, we are brought face to face with the question, whether the group of institutions and customs which form the unique land system of England deserve to be upheld by English statesmen and economists, either by virtue of their intrinsic

merits, or by reason of their having become incorporated into our national character; and, if not, in what manner it may be proper to modify them by legislative enactment.

CHAPTER V.

THE ARGUMENTS FOR AND AGAINST PRIMOGENITURE.

IN approaching this part of the subject, we must resolutely put aside two lines of reasoning which have done much to obscure it. The first of these is that which starts from the idea that younger sons have certain natural rights, of which they are deprived by the law and custom of Primogeniture. Now, it is impossible to form any definite conception of rights in this sense, except as arising from the personal exertions of those who claim them; or, at least, from expectations fostered by the law, or the parent, as the case may be. If the Code Napoléon had been introduced into England, and if the existing rule of descent by Primogeniture were afterwards substituted for it, the generation of younger sons affected by the change would have good cause for complaint, unless their interests were expressly reserved. Again, if a father had led his children to count upon an equal division of his property, and were then to accumulate all upon the eldest son, a palpable wrong would be done to all the rest. But the supposed grievance of existing younger sons who receive the small fortunes to which they were born, and have always looked forward, will not bear a moment's investigation. It is in no respect more real than the grievance of those who are born to no fortune at all, and look wistfully at the inherited wealth of the richer classes. Indeed, the cadets of territorial families who are disposed to regard themselves as the victims of injustice may well reflect that, but for the institution of Primogeniture, those families might perhaps have little or no territory in their possession, but might long since have been merged in the mass of the community. Except where the law steps in, on intestacy, to defeat the known intentions of a father, or a father disappoints the hopes encouraged by himself to aggrandise an eldest son, it can hardly be said that Primogeniture involves *injustice* to younger children. Whatever injustice it may involve is sustained by

society at large, and though society consists of individual members, those of its members who ultimately suffer most by the operation of Primogeniture are certainly not to be found in families which owe their existence to it.

Still more irrelevant are the attacks which have recently been made on Primogeniture from a communistic point of view. Communistic theories of property, if valid at all, are valid not against any particular rule of succession, but against individual proprietorship as such, or against the ample and peculiar rights of English landlords—rights of which no proprietary class is more tenacious than new purchasers. No doubt it is a perfectly intelligible proposition that all the land in the kingdom ought to be “nationalised” and placed under public management, because individual owners cannot be trusted with full dominion over that part of the earth’s surface by which and upon which all natives of England must live, unless they choose to emigrate. It is evident that, apart from all other objections, this doctrine is the very negation of the belief in peasant-proprietorship and “the magic of property,” being, in fact, an essentially urban sentiment, and inevitably destructive to all independence of rural life. Nor can it be said that our experience of corporate administration, in the case of lands held by collegiate, ecclesiastical, and municipal bodies, as well as by trustees of charities, is such as to recommend the substitution of public for private ownership on a much grander scale. At the same time, it is incontestable that land has actually been treated by all governments, not excluding our own, as more within State control, for many purposes, than other kinds of property; and it is possible to conceive circumstances under which it might be expedient to extend State control much further over the soil of these islands. But what has all this to do with the right of Primogeniture? and what consistency is there in a programme which couples the abolition of that right, and the adoption of free trade in land, with provisions designed to withdraw from the market and consolidate into larger municipal domains more and more of the properties which are already supposed to be too few? This is not the place to discuss the moral or economical aspects of these provisions; suffice it to point out that, except so far as they are aimed at overgrown private estates, they have nothing in common with the policy of reforming the law and custom of Primogeniture. This policy assumes the maintenance of

private property, and is directed to its more equitable distribution among individuals, without contemplating a return to a communal system of ownership, which, if accepted, would supersede all laws of inheritance and powers of disposition. It is the more necessary to insist on this point, because the cause of Primogeniture has been strengthened, and the efforts of its opponents weakened, by the unfounded impression that it cannot be touched without reconstructing our whole law of property, whereas no more is demanded or required than an amendment of one single chapter.

The most familiar, as well as the strongest, arguments in favour of Primogeniture as it exists in England are derived from considerations which must be called, in the largest sense, political. It was as a powerful bulwark of our landed aristocracy that Burke defended it in his "Appeal from the New to the Old Whigs," emphatically declaring that "without question it has a tendency (I think a most happy tendency) to preserve a character of consequence, weight, and *prevalent influence over others*, in the whole body of the landed interest." The Real Property Commissioners appointed in 1828 fully endorsed this opinion in their first Report, which contains a laudation of the settlements then in use as the best means of "preserving families," and as investing the ostensible lord of the soil "with exactly the dominion and power of disposition over it required for the public good." The English law of intestacy is regarded by the Commissioners with equal approbation, since it "appears far better adapted to the constitution and habits of this kingdom than the opposite law of equal partibility, which, in a few generations, would break down the aristocracy of the country, and, by the endless subdivision of the soil, must ultimately be unfavourable to agriculture, and injurious to the best interests of the State." Very similar opinions are expressed by Mr. McCulloch in combating the well-known *dictum* of Adam Smith, that "nothing can be more contrary to the real interest of a numerous family than a right which, in order to enrich one, beggars all the rest of the family." Mr. McCulloch, indeed, though he condemns the old indestructible Scotch entails, since abolished by law, treats it as a characteristic merit of English Primogeniture that it sustains a high standard of luxury among country gentlemen of which the example is not lost upon the mercantile classes.

If we analyse this plea for Primogeniture somewhat more

closely, it will be found to resolve itself into several distinct lines of reasoning. In the first place, it is alleged, or rather suggested, that without Primogeniture it would be impossible to maintain an hereditary peerage. The sufficient reply to any such allegation is that an hereditary peerage may be kept up, and is kept up in some Continental states, either by means of *majorats* specially created, or by making certain estates "run" with the titles derived from them, without any general law or custom of Primogeniture. Moreover, unless Primogeniture be defensible on other grounds, as beneficial to the whole community, it would surely be monstrous that it should be imposed on the families of some hundred thousand freeholders—not to speak of those who may be rendered landless by its indirect operation—for the sake of the few hundred families composing the hereditary nobility. In fact, Burke himself, with all his aristocratic bias, was careful not to rest the case on so narrow a ground; and few admirers of Primogeniture would now venture to advocate it in the interest of the Upper House, as distinct from that of the nation at large.

But, secondly, it is urged, and not without great force, that Primogeniture is actually productive of greater benefits, political and social, to English society as a whole than could be expected from a system of more equal partibility. It is better, we are told, for rural England at least, to be paternally governed by a comparatively limited hierarchy of eldest sons, whose successors are usually designated long beforehand, than for estates to become subject to division once in each generation, with the risk of passing into the hands of new purchasers having no ancestral connection with land. It is contended that an heir born to a great position and trained from his earliest years to make himself worthy of it, acquires habits, and is fortified by motives, which are powerful securities for his future virtue and capacity. This ideal landowner, having been thoroughly instructed in all the manifold duties of property during his father's lifetime, and conscious that a large body of tenants and dependants look to him for guidance and example, enters upon the management of his estate in a spirit altogether superior to commercial self-interest, prepared to do for it what no mere land-speculator would think of doing, and no small proprietor could afford to do. If he is a religious man, he builds churches in neglected hamlets; if he is an agriculturist, he sinks more in drainage and farm buildings than he will ever

live to receive back in rent ; if he is a social reformer, he erects model cottages, carries out sanitary improvements, patronises schools, or devotes himself to bringing forward the most promising youths in the parishes of which he is lord. In all these enterprises, as well as in the unpaid services which he renders on the magisterial bench, on local boards, and in the varied spheres of influence open to resident landlords, he is actuated by no hope of pecuniary reward or even of personal gratification, but rather by that peculiar sense of honour, compounded of public spirit and family pride, which has played so large a part in the history of England. His character, thus developed, exhibits a marked individuality, but it is by no means a one-sided individuality. With education enough to understand the economical and legal questions which he is daily called upon to settle in practice ; with leisure enough to follow the course of affairs both at home and abroad ; with refinement enough to appreciate art and literature ; with energy enough to enjoy a life of constant activity in which " county business " is relieved by field sports and a laborious summer holiday ; with independence enough to smile at official favours or displeasure ; the model English country gentleman represents a species which has never been developed in any other country, and the absence of which goes far to account for the failure of local self-government in France. Is it, we are asked, a legitimate object of state policy to promote the gradual extinction of this class, and meanwhile to disorganise the whole structure of family life within it, for the sake of any doubtful advantage that may be gained by a wider distribution of proprietary rights ?

Such a landlord as has been described may be taken as the embodiment of the English landed aristocracy, *as it should be*, from the political and social point of view. Possibly an equally attractive and not less faithful picture might be drawn of a landed democracy, *as it should be*, illustrated by Swiss and American experience. We have not, however, to deal with ideals, but with realities ; not with exceptions, however numerous, but with general tendencies. Let it be granted, once more, that a high standard of political and social responsibility is recognised by a very large number of English country gentlemen—the special products, *ex hypothesi*, of Primogeniture ; and, further, that an institution so bound up with much that is admirable should not be lightly disturbed. Still, we are bound

to inquire whether these results have not been purchased too dear; whether the continued maintenance of Primogeniture in its integrity involves no countervailing evils, and whether a nearer approximation to ancient usage and foreign codes of land-tenure might not conduce to greater stability and greater unity in our body politic.

It is certainly impossible to ignore the grave political danger involved in the simple fact that nearly all the soil of Great Britain, the value of which is so incalculable, and progressively advancing, should belong to a section of the population relatively small, and progressively dwindling. More than twenty years ago, Mr. Porter, a very high authority on economical statistics, arrived at the conclusion that "with scarcely any exception, the revenue drawn in the form of rent has been at least doubled in every part of Great Britain since 1790." In the period which has since elapsed the same causes have continued to operate with still greater activity. It was stated in a report issued by Mr. Goschen, as President of the Poor-Law Board, that the annual value of lands, houses, railways, and other property in the United Kingdom assessed to the income tax, under Schedule A, rose from £53,495,375 to £143,872,588 between 1814 and 1868; and this must be exclusive of the immense sums (estimated by Mr. A. Arnold at £100,000,000) received by the landed interest from railway companies, over and above the market price of the land thus sold. From a later Report of the Inland Revenue Office it appears that the assessment of the United Kingdom, under Schedule A, amounted to more than £150,000,000, and that of England and Wales alone to £122,599,255, in the year 1873-4, and the Commissioners give reasons for believing the real advance in the value of landed property to have been much greater. But it is the less needful to enter minutely into any such calculations, inasmuch as it is not disputed that for many years past the rental of England has been constantly on the increase; while the fact that persons are willing to invest in land at a low present rate of interest is the best proof either that a further increase in its annual value is expected, or that its annual value is no measure of its real worth to a purchaser. In short, the man who buys land buys not only what may pay him so much per cent., but what may give him social position, and power over his tenants and neighbours. It is precisely this which renders the undue concentration of landed property

so detrimental to public interest in quiet times, and so perilous to its possessors in times of revolution. We have seen that, whether the aggregate number of English landowners be measured by thousands or hundreds of thousands, a small fraction of them possesses more land than all the rest together, having dominion, moreover, over the greater part of London itself, and many of our provincial capitals. Had the legal rights actually possessed by such proprietors as the Marquis of Westminster been strained to the utmost, instead of being exercised for the most part with forbearance and discretion, legislative interference would assuredly have been needed to avert a revolutionary solution of the English land question. Very serious issues, too, have already arisen in England upon which the interests of rural landowners have been ostensibly in antagonism with those of the commercial and industrial classes. Still more serious risks of collision between town and country are foreshadowed by recent events in France, where the millions of peasant proprietors constitute the one great barrier against Communism. Were it possible to imagine a similar crisis occurring in England, it is to be feared that no similar barrier could be presented by the handful of great proprietors, however powerful their existing influence, who have profited so enormously, and with so little effort of their own, by the growing prosperity of the country during the present century.

In the next place, we cannot and must not ignore the less favourable aspect of Primogeniture, in its relation to public life and national energy. Mr. W. L. Newman, in a remarkable essay on the "English Land Laws," speaks of their tendency "to establish in the centre of each family a magnificently fed and coloured drone, the incarnation of wealth and social dignity, the visible end of human endeavour, a sort of great Final Cause, immanent in every family." Without adopting this somewhat invidious conception of the system, we may well ask ourselves whether it is, on the whole, for the public good to encourage the development of a class wholly dependent on birth, and independent of merit, for the command of all that makes life desirable. Berkeley asks—"What right hath an eldest son to the worst education?" and Bacon, after describing a new expedient for defeating the recent legislation against entails, touches in a pregnant sentence the very bottom of this question:—"Therefore, it is worthy of good consideration, whether it be better for the subject and sovereign to have lands

secured to men's names and blood by perpetuities, with all the inconveniencies above mentioned, or to be free, with hazard of undoing his house by unthrifty posterity." No doubt Primogeniture creates a "leisure class," but is this an unmixed benefit? "Leisure" may be essential to æsthetic and intellectual culture, but it is the leisure earned by honourable exertion or guaranteed by a discriminating use of endowments, not the leisure inherited as a right attaching to private property. It would be difficult, indeed, to show that our peerage and landed aristocracy, with all their overwhelming advantages, have contributed one-half so much to science, literature, or art as the rest of the community who have been thrown upon their own labour for the means of making their bread. Even in politics, where eldest sons long enjoyed a precedence that might easily have proved exclusive, younger sons and men of no family at all have more than equalled them in the attainment of great eminence; and it is no absurd opinion that England would have produced a larger number of really illustrious men, if she had abandoned Primogeniture long ago. Were the inheritance of a great name and fortune a security for public virtue, we should expect to find the standard highest in the most exalted order of our nobility; whereas it is too notorious to need specific demonstration that an exceptional indifference to such motives has of late been manifested by persons of ducal rank. No doubt these are exceptions, but they are by no means rare exceptions. They are exceptions, moreover, of which Primogeniture must bear the whole discredit, for they are the direct result of settling princely territories upon unborn heirs, of whose capacity and character there is not the smallest presumption. On the other hand, the whole credit of instances, happily more numerous, in which a noble estate is nobly administered, cannot fairly be assigned to Primogeniture. Before we can be assured that society is a clear gainer by the existence of a great landowner, combining every perfection of his type, we must be satisfied that he does more good than all the yeomen whom he displaces, and more than he would have done himself if compelled to win his own position in the world, perhaps struggling, like Warren Hastings, for the redemption of a lost patrimony.

Indeed, the merits so freely claimed for Primogeniture from this point of view only appear irresistible so long as we leave out of sight those which may be claimed for the alternative.

When, for instance, it is urged that no incentive to honourable ambition is so potent as the prospect of founding a family, it is forgotten that, whatever may be the force of this incentive, it is exhausted by one individual to the detriment of his descendants. The first bearer of a title may have rendered important services to the State in the attempt to achieve success ; but no sooner is success achieved, than an indefinite series of male successors is placed above the operation of the very motives which inspired and ennobled the exertions of their ancestor. Again, when it is contended that Primogeniture keeps up the local settlement of families, which is assumed to be an unmixed benefit, it is entirely forgotten that while it roots the elder branch for the time being in the soil, it uproots all the others. The eldest male in each generation is selected to occupy the family mansion and estates, but the other members of the family are by the same act divorced from the place of their birth, and scattered abroad to seek their living in other parts of England, in the metropolis, or in the colonies. This dispersion of families, which does not equally prevail in any other class, is, in fact, often represented as one of the blessings incident to Primogeniture. It is by no means uncommon to hear eloquent discourses on the happiness of younger sons in having to start in life without a competence, and especially without a competence in land, by persons to whom it never occurs that, if the heritage of poverty be so enviable, it would not be difficult to devise means whereby it might be shared by eldest sons also.

Equally delusive is the notion that Primogeniture operates as a democratic solvent upon the landed gentry, inasmuch as younger sons, who might otherwise help to form an exclusive aristocracy, are thus constantly thrust down into the plebeian class. The fusion of the upper and middle classes in England, so far as it exists at all, is not the effect of Primogeniture, but of national temperament. In Germany, where titles descend to younger sons, the utmost insolence of family pride is manifested by the poorest scions of nobility ; in America, where popular opinion almost enforces the equal division of property, social equality is complete, and younger sons are more industrious than in England. In short, men's habits and bearing are governed rather by early training than by future prospects ; and a youth brought up in one of our ducal palaces, though destined to be cut off with a beggarly fortune, is more likely to

be an aristocrat in character than if brought up in a frugal home with great expectations.

But these are not the only, or the main fallacies which beset the social argument in favour of Primogeniture. That argument rests upon the further assumption that entails and settlements are, at least, effectual to give us a resident proprietary capable of discharging the first duty of property, by developing to the utmost the productive energies of the soil. This assumption will scarcely bear examination by the light of every-day experience. Instead of Primogeniture creating a wealthy resident proprietary, it is certain that it produces, and almost demonstrable that it must produce, the very opposite effect. Out of three English proprietors owning above 100,000 acres each, two have properties scattered, respectively, over eleven counties. Most of our great aristocratic houses possess more than one family place. It is impossible for the head of the family to reside continuously at each; during the whole London season he is nominally in attendance on the House of Lords, and, unless he is exceptionally conscientious, he easily satisfies himself with a flying visit once a year to his less favoured estates. In short, absenteeism is the inevitable consequence of a system which concentrates landed property in few hands, and, where absenteeism exists, the *raison d'être* of Primogeniture is materially weakened. But this is not all. Entails and settlements provide an ample security against landed property being divided according to the dictates of natural affection, but they provide no adequate security against its remaining practically without a responsible owner during a whole lifetime, or even against its ultimately passing into the hands of strangers. If a duke ruins himself by gambling, and is declared bankrupt, his domains may be managed for the sole benefit of his assignees during half a century, unless he can obtain the concurrence of his eldest son to sell them outright. In this case, the whole inheritance of a family may be converted into money at a stroke by collusion between two of its members, for the exclusive profit of themselves or their creditors, without the semblance of consent on the part of the younger children and junior branches, who are supposed to have a moral, if not a legal, interest in the land thus alienated.

It is true that where such things happen—and such things do happen—the farmers and cottagers on the estate usually change masters for the better, and this fact points to what is

the inherent weakness of Primogeniture, economically considered. It vests the control of property, wherever it prevails, not in a series of hereditary landowners, but in a series of hereditary life-tenants, or "limited owners," as they are now called, without the full rights and sense of proprietorship, sometimes heavily embarrassed, and almost always with a standard of unproductive expenditure more than commensurate with their means. Let it be granted that somewhat undue stress has been laid on this particular topic by some opponents of Primogeniture, who measure its economical defects by the whole difference between the actual produce of England, and that which might be realised if the entire area of the country, including the waste lands, were brought into the very highest state of cultivation. Let it be granted also that ancestral connection may count for something against a superior command of capital available for agricultural improvements, that grants are seldom excessive on settled estates, and that, until the poor in country districts can be raised to greater independence, they might often suffer by the substitution of strictly commercial relations for their present semi-feudal connection with the family on whose property they are settled. Still, we may confidently appeal to persons conversant with the sale of land to confirm the inference deducible from the laws of political economy—viz., that, in the majority of instances, when land comes into the market, it passes from worse into better hands, and that, consequently, so far as Primogeniture artificially obstructs free trade in land, and saves the estates of spendthrifts from partition, it works a substantial injury to society. The new purchaser may be comparatively ignorant of country life, but he is not encumbered by rent-charges of indefinite duration, by mortgages contracted to pay off his father's debts, by dynastic traditions of estate-management, by the silly family pride which must needs emulate the state of some richer predecessor, by the passion for political dictation to which the refusal of leases is so frequently due, or by the supposed necessity of satisfying the supposed expectations of the neighbourhood. Having no liabilities of a past generation to discharge, he can make a liberal provision for younger children out of his rental, by way of life insurance or otherwise; and if this should not suffice with such addition as he may be able to make from invested funds, there is nothing to prevent his leaving them portions of the estate or directing

portions to be sold for their benefit. Meanwhile, he is master of his own property, and free to develop its resources without feeling that he is either compromising or unjustly enriching an eldest son.

This brings us back to what may be called the domestic aspect of Primogeniture; that is, to its influence upon the happiness and welfare of the households immediately affected by it. Apart from the question whether upon other grounds it is expedient, in the interest of the State, to perpetuate a landed aristocracy, we have to consider the question whether the English institution of Primogeniture conduces to family peace and virtuous conduct within that aristocracy. This is a question which has been very fully discussed by Mr. Locke King and Mr. Neate, the latter of whom specially insists on the humiliating and unbecoming position in which the father as life-tenant is placed towards the eldest son, as tenant-in-tail in remainder. "It is a hard thing," he says, "for a father to have to confess and excuse his extravagance to a son, or to justify his desire for a second wife. It is a worse thing for a son to judge of his father's excuses, or to decide virtually, as head of the family, whether it is right that his father should be allowed to marry again." Yet this is but one of the forms in which our system of entails operates to sow discord and undutiful feeling in families. Long before the heir to a great estate emerges from boyhood, he is made aware that his fortune does not depend on his father's will or his own deserts. He soon learns to consider the estate as his, subject only to his father's life-interest, and expects to receive an allowance making him to live in idleness, so that a double burden is laid upon the land for the support of two establishments yielding no agricultural return. As the father grows older, and the son's expectation of succeeding becomes nearer and nearer, painful jealousies are very apt to spring up between them, till at last, perhaps, not a lease can be granted or a fall of timber authorised, lest it may prejudice or be represented as prejudicing the reversion. Of course, there are many examples of families owning settled estates, where the father and eldest son work together in harmony, both looking upon themselves as trustees not only for the rest of the family, but for all placed under their control. But it is self-evident that an indefeasible right of succession vested in the eldest son must tend to weaken parental authority, and to facilitate borrowing money upon the security of reversionary interests,

We have already seen that it is fallacious to speak generally of Primogeniture as inflicting injustice upon younger children. It is, however, equally fallacious to describe it as securing younger children, regarded individually, a full equivalent for an equal share of the family heritage upon the father's death. In what does this imaginary equivalent consist? Certainly not in anything capable of being reduced to a definite conception, unless it be the enjoyment of a rank determined by that of their elder brother, and of a claim on his influence for their advancement in life, as well as the maintenance at his expense of a country seat where they are welcome and honoured guests. Of these privileges, the two last depend entirely on their remaining on good terms with the head of the family, whose interest naturally centres in his own children rather than in his father's children, and whose residence, however freely thrown open to them, cannot after all be treated as their home. As for the first privilege, it may well be doubted whether rank or status out of proportion to a man's pecuniary means be not an encumbrance rather than a boon. To have acquired, under a parent's roof, habits, tastes, and ideas of style which cannot be gratified in maturer years without running into debt, has been the ruin of many a promising career. To this cause, more than any other, is traceable the self-imposed celibacy too prevalent among younger sons of good family in the metropolis, and inevitably prejudicial not to morality only, but to steadiness and earnestness in practical work. By this cause, more than any other, was fostered the shameful jobbery of former days, when the Church, the Army, and the Civil Service were refuges for the privileged destitute, and junior members of the aristocracy were said to rely on the Budget for their "ways and means." Now that patronage has been most properly restricted, that capital and mercantile connection is almost essential for success in business, and that even the Bar is becoming more and more dependent on the lower branch of the legal profession, it is very doubtful whether younger sons of county families stand a fair chance in the race of life against young men of the middle class with equal fortunes, more active backing, less sensitive feelings, and a more utilitarian education. If they have no right to complain of a lot which appears very enviable to most of their countrymen, and which only needs exceptional energy to make it so, yet they owe no gratitude to a system which inverts the natural order of human life, accustoming them

to ease and luxury in youth, but offering them no adequate provision either for an early settlement or for an early retirement.

From every point of view, then, we are led to an adverse judgment on the extreme development of Primogeniture established in England by the joint operation of law and custom. It must be condemned, politically, as aggravating the perilous dualism of town and country; as affording the very minimum of constitutional stability to be derived from the conservative instincts of proprietorship; and as giving a very limited body of landlords a preponderance in the State, none the less unreasonable and obnoxious because it is defended on the untenable ground that it is bound up with the existence of the Upper House. It must be condemned, socially, because it helps to stereotype the caste-like organisation of English classes "in horizontal layers," setting up in thousands of country parishes a territorial autocracy, which, however benevolently exercised, keeps the farming and labouring population in an abnormal state of dependence on a single landowner, while the rural districts have gradually been deserted by the lesser gentry who helped to bridge over the chasm between rich and poor in ancient times. It must be condemned, economically, because it cramps the free play of economical laws in dealings with land, multiplies the difficulties and cost of transfer, and discourages a far-sighted application of capital to agriculture, either by the landlord, who is usually a mere life-owner, or by the tenant, who seldom holds a lease. It must be condemned, morally, because it holds out to almost every eldest son in what must still be regarded as the governing class the assurance of wealth and power, whether he be worthy of it or not, and subject to no condition but that of surviving his father. Lastly, it must be condemned, in the interest of family government, because it fatally weakens the authority of parents over eldest sons, and introduces a degree of inequality into the relations of children brought up together, which often mars the cordiality of their intercourse in after life.

CHAPTER VI.

PROPOSED REFORM OF THE LAW, AND RESTRICTIONS ON THE
POWER OF SETTLEMENT.

THESE considerations are amply sufficient to prove the expediency—not to say the necessity—of reforming the institution of Primogeniture, so far as it depends on law. Upon one principle to be embraced in any such reform, public opinion has long pronounced itself so decisively that it may be taken as already conceded. This principle is the assimilation of real to personal property, in respect of distribution on intestacy. Even the stoutest adherents of Primogeniture, as a custom, are beginning to allow that, in default of a will or settlement, the law should incline to equality, especially as intestacies are more likely to occur in poor than in wealthy families. To what extent a change in the law of succession on intestacy would affect the practice of testators and settlors is a matter of mere speculation, on which it would be rash to speak confidently. Many are of opinion that no legal presumption in favour of equal partition would avail in the least to counteract the rooted propensity of Englishmen, once possessed of land, to found and keep up a family, but that, on the contrary, people who are now content to die intestate would forthwith make wills disinheriting all their children but one. This opinion appears to derive some little weight from the history of landed property in Kent, where a great many estates have been disgavelled, and where it is said that wills are not more favourable to younger sons than in the rest of the island. Others believe that a deliberate reversal of the policy hitherto sanctioned by the Legislature would exert a powerful influence on popular sentiment, and, coupled with the direct operation of the new law, would leave a very sensible impression on the rural economy of England within two or three generations. In support of this belief, it may be urged that, in a vast number of cases, the form of settlements and wills is practically dictated by the solicitors who frame them, and who themselves follow, more or less exactly and more or less consciously, the course prescribed by the law on intestacy. A man informs his

solicitor that he knows little of legal phrases, but that he wishes to settle his property strictly in the usual and right manner; upon which the solicitor makes a will, giving all the land to his eldest son, and dividing the personalty, if any, among his widow and children, nearly in accordance with the Statute of Distributions. So close is the correspondence to the custom of the law, that whereas, in default of sons, the law vests the land in all the daughters and not in the eldest daughter only, the same rule is adopted, with very slight variation, in most wills and settlements of realty. Were the law altered, however, and especially were it altered after a thorough discussion of the whole question, the uniformity of these usages would be effectually broken. Solicitors would feel bound to ask for more precise instructions from their clients; testators and settlors would more fully realise their responsibility; and the dispositions of landed property hitherto embodied in the common forms of conveyances would have to be reconsidered by the light of modern ideas. Here and there an old property would devolve to several children under the law of intestacy, and yet would be kept in the family by means of such fraternal arrangements as are made every day on the Continent. A few instances of this kind would go far to dispel prejudices against equal partition, while, in the case of properties to which no family sentiment attaches, directions to sell and divide the proceeds in specified proportions could hardly fail to supersede, by their superior convenience, the plan of devising to one child and charging portions for all the rest. Indirectly, therefore, the mere assimilation of real to personal estate, on intestacy, would probably effect a considerable though gradual revolution in the English land system, even though not supplemented by any other enactment.

Such is the object of Mr. Locke King's original Bill "for the better settling the Real Estates of Intestates," introduced in the Session of 1859, and re-introduced by Mr. T. B. Potter in the Session of 1876. This Bill provides that where any person beneficially entitled to any real estate shall die without a will, that estate shall pass to his executor or administrator, and shall be either divided or sold, exactly as if it were personalty, for the benefit of creditors and the next of kin. A "Real Estate Succession Bill" of the same general character was introduced by the Government in the Session of 1870, but that Bill, unlike Mr. Locke King's, was intended to cover

legal, as well as equitable, or beneficial, estates, while it included various saving clauses more or less open to criticism. A third Bill, introduced by Mr. Locke King and Mr. Hinde Palmer in the Session of 1873, after providing against certain technical difficulties, embraced within its definition of real estate every kind of property which is not personal estate. Not one of these Bills, however, goes the length of vesting in the executor realty passing by devise, in the same manner as personalty, including leaseholds, passing by bequest, vests in the executor under the existing law. Nor does any provide that real estate, passing by descent or devise, shall cease to be exempted from the probate duty imposed on personalty. Still less does any interfere with the rule under which a person succeeding to real estate, though he may inherit in fee-simple, is charged with succession duty on his life interest only, and is permitted to pay this duty by instalments—a rule which amounts to a legislative protection of landed property against a salutary liability to dispersion.

A far more serious and difficult issue arises upon the various proposals for amending the existing law of entail and settlement. These proposals usually assume one of two general forms, widely differing, in principle, from each other. Either they contemplate a reconstruction of our land system on the model of the Code Napoléon, or they are directed to a simple restriction of the power whereby estates can be tied up for a life or lives in being, and a period of twenty-one years afterwards. Both of these schemes purport to promote free trade in land, and to check its aggregation in the hands of an exclusive aristocracy: the former, by constantly and forcibly breaking up properties into fragments, easily saleable; the latter, by prohibiting or curtailing the limitations which prevent their coming into the market. Thus, both involve an abridgement of the liberty now enjoyed by English settlers and testators, but with this important difference, that whereas the one scheme would only abridge the liberty of a bygone generation to control the action of the living generation, the other is directly at variance with full individual proprietorship. Under the French system of enforced partible succession the property of each citizen is rigidly settled, with the exception of a fixed disposable portion; but the settlement is made by the State, instead of by himself, and therefore without regard to peculiar family circumstances. The causes which facilitated the

introduction of this great legal revolution into France have been explained by MM. de Tocqueville and Lavergne, and Mr. Cliffe Leslie has done much to repel the objections, both social and agricultural, which have been persistently urged against it in this country. It is a remarkable fact that no French Government, whether Legitimist, Orleanist, Imperial, or Republican, has ever attempted to reverse it; nor can we fail to be struck by the opinion so generally expressed in the Reports above cited, that in countries which have borrowed this article of the Code Napoléon it is believed to work beneficially. On the other hand, it is not less significant that no practical English statesman has ever advocated its adoption, and that even those English theorists who have least sympathy with the rights of property have apparently no great partiality for the agrarian constitution of France and Belgium. Their ideal is not the infinite disintegration of landed property among peasant owners, which they would regard as a retrograde measure, but, on the contrary, its concentration in the hands of one national land commission, or a number of municipal land commissions, under whom private individuals, if allowed to call any land their own, must be content to hold leases. With that far larger and more important class who are engaged in amassing wealth in the assured hope of leaving it as they please, enforced partible succession would assuredly find as little favour as with the landed aristocracy; and if there be a leaning in this class towards any foreign land law, it is not towards that of France, but towards those of the United States and our own colonies. As for the great mass of Englishmen, it may be taken as certain that a law placing the State *in loco parentis*, and declaring that a father who has made his own fortune shall not be free to deal with it by will, or to disinherit a child, however worthless and ungrateful, would be in the highest degree unpopular. Upon these grounds, apart from all economical considerations, we must dismiss this proposal as an impossible solution of the problem before us—impossible because it would satisfy no class or school of thought in England, because it has no foundation to support it in the organic framework of English society, and because the very ideas necessary to lay such a foundation are entirely wanting. It would be rash to assert that so direct an interference with personal rights will never be accepted by this country but we may safely assert that if the only alternative to English Primogeniture were indefeasible equal succession, that

institution would probably fulfil the prediction of Adam Smith, and survive for generations longer.

For different, but equally cogent reasons, we must reject as impracticable the bold suggestion of Mr. J. S. Mill, who condemns both the English and French rules of succession, that it would be expedient to restrict, "not what any one may bequeath, but what any one should be permitted to acquire by bequest or inheritance," so that it should not exceed a *maximum* "sufficiently high to afford the means of a comfortable independence." A very little reflection upon the practical application of this suggestion ought surely to convince us that even if it were possible to make it the basis of a testamentary code, it would be hopeless to carry it out with any approach to real equity. But a detailed criticism of it would here be out of place, because it is not so much designed to check the abuses of Primogeniture as to realise a favourite idea of Bentham, by diverting the surplus of private accumulations into the public treasury—an object which may or may not be desirable in itself, but which is beyond the legitimate scope of our present inquiry.

By what means, then, can the vices inherent in the English system of entail and settlement be remedied without impeaching the essential rights of proprietorship and disposition? According to some law reformers, nothing more is required for this purpose than a simple legislative prohibition of entails upon unborn children. There can be no doubt that such a measure, if so framed as to exclude the evasion of its principle by the creation of "powers" or otherwise, might reduce by twenty-one years the period for which land can be lawfully kept *extra commercium* by the force of a single instrument. But it would leave the mischief of limited ownership and contingent incumbrances wholly untouched within the allotted circle of a life or lives in being, or rather, it would stimulate family pride and legal ingenuity to devise new modes of settlement which should make up by their greater complexity for the brevity of their restrictive operations. Indeed, it is quite possible that a mere prohibition of entails upon unborn children, without any further change in the law, would have less practical effect than some minor amendments of a less sweeping character. In the first place, a broad distinction might be drawn between settlements made by will and settlements made by deed *inter vivos*, especially upon marriage. Posthumous dispositions of all kinds

are watched in these days, on very sufficient grounds, with increasing jealousy, and posthumous entails are liable to peculiar objections which do not attach to others. When they are derived from wills executed in prospect of death, they are far more likely to be capricious and self-defeating than if they had originated from the same mind in the full vigour of life; if the will has been executed long before the testator's death, from which it, nevertheless, "speaks," it may not represent his final intention, and may even contravene his first intention, owing to circumstances which have occurred since the date of its execution. In any case, the power of entailing by will is exercised secretly, and with much less security for deliberation than is afforded by the negotiations that usually precede a marriage settlement, which is manifestly, of all settlements, the one entitled to most indulgence. Upon this ground a second distinction might be drawn between entails upon the unborn children of the settlor himself and entails upon the unborn children of some other person. It may, possibly, be reasonable to allow a man about to marry the power of providing for his own unborn children by an antenuptial settlement, and yet quite unreasonable to entrust the same power to a stranger, animated, perhaps, with the senseless ambition of immortalising an ignoble name. But it may well be doubted whether it can ever serve any good end that a bachelor should be enabled to designate as his heir a child which may never be born, so irrevocably as to defeat his own capacity of choosing among his children when they are born, or rather when their characters are sufficiently formed. This anomaly might be rectified by an enactment importing into every settlement, by implication of law, a power of appointment, to be exercised at the discretion of the father, but only among the children, and, when exercised, to override the entail. It might also be provided that every tenant for life under an ordinary family settlement should have the power, by a like implication of law, to charge the estate, for the benefit of his wife or younger children, to an amount bearing a stated proportion to its annual value. The proportion so fixed would thenceforth constitute, so to speak, a legal standard of family justice, and though its adoption would be permissive and not compulsory, the consciences of many would be awakened to a sense of their parental obligations, till it came to be thought a disgraceful thing for a nobleman with £50,000 a year to cut

off his daughters, either married or single, with portions of £5,000 or £10,000.

A far more effective blow might be struck at Primogeniture, as founded on family settlements, by absolutely putting an end to life-estates in land. Supposing this to be done, but the right of entailing to be preserved, each successive head of a family would be left to inherit the undivided property as tenant-in-tail instead of as tenant for life, unless the entail had been cut off by his predecessor. The chief difference from the family point of view would be that eldest sons, being entirely in the power of their fathers, who might exercise the right of disentailing at any moment, would be, as it were, bound over in heavy recognisances to good behaviour. The chief difference from the economical point of view would be, that by virtue of the same right the ostensible owner of a property might charge it for his debts to its full value, instead of only to the value of his life interest. It is, however, incredible that, under such a law, the passion for making eldest sons would remain unabated. Since younger children would be consigned to beggary, where the father's property consisted solely or mainly of land, unless they were given shares of it or charges upon it, an universal custom of breaking entails for this purpose would probably spring up, and apportionments so made out of a fee-simple estate would almost inevitably be far less influenced by the spirit of Primogeniture than re-settlements of the prevailing type.

But, having gone thus far, how can we avoid going one step further? It is self-evident that if life-estates were destroyed, no freehold estates would remain, but estates-tail in possession and estates in fee-simple. Now, since estates-tail in possession are convertible into estates in fee-simple at the will of the owner, who has usually the strongest motive for so converting them, it would appear that very little can be either gained or lost by retaining them. We are, therefore, once more brought face to face with the prior and larger question, whether any freehold estate in land short of absolute ownership should be recognised by the law. This question is not to be disposed of by dogmatic assertions that whatever rule be applied to realty must be applied to personalty likewise. To such assertions a controversialist might rejoin that personalty and realty have not in past times been treated by the law on this footing of equality. For instance, the heir taking all the land on

intestacy was specially exempted from the rule that sums advanced to sons in their father's lifetime should be deducted from their shares at his death, while, by a monstrous perversion of justice, a mortgage debt, contracted on the security and for the benefit of the land, was primarily chargeable on the personal estate until Mr. Locke King's Act was passed in 1854. This, however, is not the place to multiply proofs of the partiality formerly shown to land by a Legislature principally composed of landowners, still less to discuss the incidence of taxation upon land as compared with personalty. There are very strong reasons for objecting to complicated reservations of future interests in personalty, and for doubting whether the efforts of the dead to regulate the enjoyment of wealth by the living, in the interest of the unborn, are sufficiently repressed by the rule against perpetuities and the Thelusson Act. But these reasons have little or nothing to do with the law and custom of Primogeniture, which must stand or fall by the peculiar claims and obligations of real property. We are here concerned with the settlement of land, and of land only; nor is it difficult to show that land is, in this regard, a thing *sui generis*, over which the State may and ought to assume a control, far more stringent than it would be politic to assume, but not than it might rightfully assume, over other kinds of property. The familiar arguments in support of this position are derived from the fact that land is strictly limited in quantity, at least within the borders of each kingdom, and that its resources in a virgin state are not the production of human industry. These arguments are so far valid as to rebut what does not need to be rebutted—the presumption of any binding analogy between land and money. But the one decisive justification for treating land as an entirely exceptional subject of property is to be found in the entirely exceptional power which the possession of it confers. If we contemplate the supreme influence wielded by landowners collectively over the condition and especially over the dwellings of the people, if we remember that upon their estate-management depend the productiveness of the soil and the food-supplies of the country, if we realise that not only is the land in a physical sense “the leaf we feed on” but in a political sense the substratum of our whole administrative machinery, we shall not fail to perceive the full absurdity of postulating that it should be exactly assimilated to stock in plasticity for the purposes of settlement—but not, forsooth, in

facility of transfer, in the course of devolution on intestacy, or in liability to probate and succession duties.

The more thoroughly we appreciate the almost insuperable difficulty of partially reforming an institution so deeply rooted and widely ramified as the custom of entail and settlement, the more irresistible will appear the conclusion that it is better to reform it altogether, by abolishing all kinds of ownership except ownership in fee-simple, with all customary and copyhold tenures, and by imposing proper restrictions on the length of leases. The conception of such a measure would demand an effort of constructive statesmanship quite as bold as that of an Irish Land Bill, while its execution would affect still vaster interests, and must be spread over a longer period of time. Once carried, however, it would cut half the knots which together make up the English Land Question. One of these knots consists in the difficulty, expense, and delay attending the transfer of land, especially in small lots, and it is sometimes assumed, too hastily, that all this could be rectified by a good system of registration, such as exists in most Continental states, where a public court does what is here done by conveyancers. It should be remembered that, even where a transfer of stock is effected by a mere stroke of the pen, a long and costly investigation must often be previously undertaken on behalf of the trustees who authorise the sale. No system of registration could bring about free trade in land under settlement, but a register would become invaluable both to vendors and purchasers when every name in it would be that of an owner in fee. Trusts of land, with all their vexatious incidents, would soon be obsolete when there were no reversionary interests to be protected. Mortgages on old family properties would be rarer and more easily cleared off when every acre of land could be turned into ready money at the owner's pleasure. They would, however, be more frequently contracted on new purchases by capitalist farmers, when it was discovered that it might be cheaper to pay interest to a mortgage than rent to a landlord.

But these advantages, it must be confessed, might perhaps be secured by less radical methods. What cannot be secured by any method consistent with the principle of modern entails is, in one word, unity of proprietorship. A settled estate is an estate which has not, and may never have, a real proprietor. For the common family settlement is a contrivance whereby the land itself may be saved from *morcellement* at the expense

of the proprietary interest, which is dissected, split up, and parcelled out into more shares than a French lawyer would think possible. This process is repeated in each generation by a family compact between father and eldest son, in which no other member of the family has any voice, yet neither of the parties is truly a free agent, or in a position to reverse the self-renewing dispensation of which they are little more than instruments, and no single person can be identified as the author. Now let us assume that, due provision being made for vested interests, all this ingenious network of particular estates, as they are technically called, were swept away by law, and that every acre of English soil belonged absolutely to some assignable owner. Let us, further, picture to ourselves a case in which the operation of the change would be most severely tested—the case of an heir succeeding to a family property strictly entailed by its original purchaser and held together for centuries by settlements in the eldest male line, but finding himself at perfect liberty to sell it or devise it as he pleases. This is a case, be it remarked, which, but for the practice of re-settlement, would occur daily under the present system, and does occur sometimes, when the eldest son obstinately refuses to commute his estate-tail for a life-estate. It will hardly be disputed that a landowner so circumstanced has a more enviable lot, with greater inducements and greater power to do his estate and all connected with it full justice, than if he were the mere creature of a settlement, but it may be imagined that his gain is more than counterbalanced by some loss elsewhere. Where, then, is this loss, and who is it that suffers by the substitution of ownership for life-tenancy in the case supposed? Not, surely, his ancestors, who, having brought nothing into the world, could not carry anything out, and whose memory it would be superstitious to personify. Not his wife or younger children, whom he is now enabled to endow according to his own convictions of justice, instead of according to a standard, determined by the paramount claims of Primogeniture, before his marriage, if not before his birth. Not his eldest son, who, by the hypothesis, must have come into the world, or at least emerged from childhood, after the alteration in the law, and would have been educated in the full knowledge that his birth-right, if any, was at the disposal of his father. Not any more distant relatives, whose interest in family estates, unless vested, is usually most shadowy and delusive. Not unborn descendants,

who might possibly inherit if the entail were perpetually renewed, under the present law, but who are equally with the dead beyond the reach of appreciable injury. In short, we strive in vain to discover any specific individual, either in *esse* or in *posse*, who could be aggrieved by the legal extinction of life-estates and estates-tail, under proper conditions of time. Still it may be said that "families," that is, territorial families, would sooner or later cease to exist without the artificial safeguard of complex settlements, and that such a result would prejudice not only the happiness of their members in all succeeding generations, but the welfare of all the rural communities grouped around them, and even of the nation at large. And thus we are led back to a point of view from which the actual results of family settlements have already been estimated, and from which it may now be useful to forecast the probable results of the alternative system.

The first, and not the least salutary, of these would be the strengthening of parental authority in those families where it is most needed. The father is, upon the whole, a wiser lawgiver and a more impartial judge within his own domestic circle than any providence of human institution, whether it be embodied in a lifeless deed or in a lifeless statute; and, as Mr. Locke King justly remarks, "if such a dispenser of property did not exist, we should only be too happy to discover such a being." Invested with full dominion over his landed estate, the head of each family would no longer have any cause to be jealous of his eldest son, or feel bound to maintain him in idleness during the best years of his life. Doubtless there would still be a strong disposition in most representatives of old hereditary properties to leave the eldest son, if not unworthy, the principal family domain, with the bulk of the land; but since he would depend, like his younger brothers, upon his father's award, and could not raise money upon his expectations, he would, like them, betake himself to some profession or business, and endeavour to increase, instead of diminishing, his future patrimony. In such cases, the position of the younger children would be very much what it is under the present system, during the parent's life; but even in such cases, and still more in cases where hereditary traditions were less powerful, the father would seldom think himself justified in leaving them a mere fraction of the property at his disposal, and would often direct his outlying estates to be divided among them or sold for their benefit. In

these ways land would be constantly "passing out of the family," and though some might be left back to it by childless uncles, the unity of family properties would be greatly and progressively impaired. Moreover, now and then a spendthrift who ought to have been disinherited would be allowed to succeed by a too indulgent father, and might gamble away in a year the purchases and improvements of many generations. This being the contingency which settlements on the eldest son are specially designed to prevent, and the occurrence of which is represented by the friends of Primogeniture as an unmitigated calamity, it may be well to pause for a moment, and observe both what it does and what it does not involve.

That it does not involve any destruction or even any "dissipation" of the land itself is so obvious that nothing but the persistent use of confused metaphors could have obscured it. Money, or money's worth, can be eaten, drunk, thrown into the sea, or otherwise literally consumed in unproductive expenditure, but a fortune consisting of land can only be squandered in the sense of being transferred from the dominion of one man into that of another or several others, which may happen to be the best thing which can befall the soil and all who live upon it. Considering the enormous injury done to any estate by the life incumbency of one insolvent—not to say, one absentee—proprietor, as well as the well-known tendency of families to degenerate after one such disgraceful interregnum, the burden of proof certainly lies upon those who hold that, in such an event, the greatest happiness of the greatest number is promoted by keeping it undivided and inalienable, lest an ancient feudal name should perish out of the county. But this, as we have seen, is a very inadequate view of the whole case. Might it not be expected that if each successive heir of an illustrious house were actuated at once by ancestral pride, and the fear of forfeiting his birthright through misconduct or incompetency, a healthy kind of atavism would develop itself in the landed aristocracy, and the virtues manifested by the founders of families would be more frequently reproduced in their descendants? Nay, more, does not our knowledge of human nature, confirmed by the experience of Germany, America, and the Colonies, encourage us to hope that in terminating all indefeasible rights of succession we should be unlocking hidden springs of energy and genius, calling into action the mettle of that "lounging class" which is the reproach

of English Primogeniture, infusing unwonted industry into our aristocratic public schools and universities, and making henceforth the antiquity of a family a true mark of hereditary strength?

In the meantime, no sudden or startling change would be wrought by the new law in the characteristic features of English country life. There would still be a squire occupying the great house in most rural parishes, and this squire would generally be the eldest son of the last squire; though he would sometimes be a younger son of superior merit or capacity, and sometimes a wealthy and enterprising purchaser from the manufacturing districts. Only here and there would a noble park be deserted or neglected for want of means to keep it up and want of resolution to part with it; but it is not impossible that deer might often be replaced by equally picturesque herds of cattle; that landscape gardening and ornamental building might be carried on with less contempt for expense; that game preserving might be reduced within the limits which satisfied our sporting forefathers; that some country gentlemen would be compelled to contract their speculations on the turf, and that others would have less to spare for yachting or for amusement at Continental watering-places. Indeed, it would not be surprising if greater simplicity of manners, and less exclusive notions of their own dignity, should come to prevail among our landed gentry, leading to a revival of that free and kindly social intercourse which made rural neighbourhoods what they were in olden times. The peculiar agricultural system of England would remain intact, with its three-fold division of labour between the landlord charged with the public duties attaching to property, the farmer contributing most of the capital and all the skill, and the labourer relieved by the assurance of continuous wages from all risks except that of illness. But the landlords would be a larger body, containing fewer grandees and more practical agriculturists, living at their country homes all the year round, and putting their savings into land, instead of wasting them in the social competition of the metropolis. The majority of them would still be eldest sons, many of whom, however, would have learned to work hard till middle life, for the support of their families; and besides these, there would be not a few younger sons who had retired to pass the evening of their days on little properties near the place of their birth, either left them by will or bought out of their own acquisitions. With these would

be mingled other elements in far larger measure and greater variety than at present—wealthy capitalists eager to enter the ranks of the landed gentry, merchants, traders, and professional men, content with a country villa and a hundred freehold acres around it, yeoman-farmers, and even labourers of rare intelligence, who had seized favourable chances of investing in land. Under such conditions, it is not too much to expect that some links, now missing, between rich and poor, gentle and simple, might be supplied in country districts; that “plain living and high thinking” might again find a home in some of our ancient manor houses; that with less of dependence and subordination to a dominant will there would be more of true neighbourly feeling, and even of clanship; and that posterity, reaping the beneficent fruits of greater social equality, would marvel, and not without cause, how the main obstacle to greater social equality—the Law and Custom of Primogeniture—escaped revision for more than two centuries after the final abolition of feudal tenures.

III.

THE LAND-LAWS OF ENGLAND.

BY THE LATE C. WREN HOSKYNs, Esq.

MORE than a generation has passed away since a late Professor of Geology, in addressing the Royal Agricultural Society at their first country-meeting held at Oxford, arrested the attention of his landed and farming auditory by the remark, that the perfect model of a plough, and of a ship, still furnished to the world of science matter of unsatisfied inquiry and speculation. The speaker cited these familiar instances—and he could hardly have made a more skilful choice—to illustrate the proposition that some of the deepest scientific problems underlie our commonest uses, problems that seem never to wear out or to grow old by time, but reappear from age to age, linking the old world and the new by questions that equally defy the decision of authority and the conquest of science.

In the interval that has elapsed since the words were uttered, in all the confidence of knowledge that continues to mark each “ignorant present time” of the world’s history, it will be admitted that the advances made by the “audax Iapeti genus” in the forms that plough both land and ocean have given to them a force little intended, or even dreamt of, by the speaker; yet the challenge still remains, that seemed almost antiquated then, and perhaps the words conveying it are but the formula for an equally pregnant future. Why it is that the most enduring questions should seem to link themselves often with what is most familiar to our daily practice, is a matter of inquiry beyond the present purpose; but there are few experienced minds whose thoughts do not bear testimony to the existence of what may be termed standing difficulties in common things.

One of these, holding a place anterior to most—if not in point of time, yet certainly in importance—connected as it is with the history of our common inheritance, is that of the Laws of the Soil, the individual right to use, to hold, to dispose of it, by gift or sale, to others—to transmit it by descent or will to the next generation—and, resulting out of all these, its general distribution amongst the various classes and members of the community.

Old as the subject is—for it must be nearly coeval with man's social existence—and worn as much by modern treatment as by mere age, yet it can hardly be denied that it comes to us little simplified, if not rather complicated by time and the usage it has found among the various families of our race, who have, in truth, exhibited few differences more characteristic, more ethnologically marked, than those arising out of national habits in reference to the soil.

The grazier, the sportsman, even that picturesque terror of our childhood, now rarely seen—the encamped gipsy—has each his ancient prototype in tribes and races having this feature in common, that to each of them the earth presented simply so much space to move in, and to use as suited their temporary wants or convenience. No law of *meum* and *tuum* was written upon the waste, or grew out of it, for those to whom not even a fixed habitation had yet suggested the idea of “property” in the land.

But as soon as *tillage* comes upon the scene, even in its earliest and rudest form, a very different claim to that implied in the mere surface use begins to develop itself. It needs no abstract description: we have it in the familiar shape before our eyes in the settlements of our own race in America and Australasia, where, in the dealings with some of the non-cultivating native races, the idea of purchase—as a contract of *permanent* and exclusive right, of irredeemable alienation—was almost as unintelligible on one side as its violation was on the other.

It can hardly with reason be doubted that the laws of the soil, including the first idea of permanent proprietary right (for even the hunter of the prairie claims a temporary sole possession), owed their very birth to tillage. Land does not become *soil* till cultivation has made it so: the process, when accomplished, is as much a manufacture as the implement that effected it—as the plough-beam shaped from the timber, or the

coulter from the smelted iron. If it could only be *carried away* after the conversion, it would have spared the world some ingenious arguments on both sides of the question of exclusive property. Had the agricultural fact been kept in view, that a seed-bed (always excepting the one primeval example on the banks of Father Nile) is as strictly an artificial production of labour as any that is wrought by man's hand upon Nature's materials, the political economist might perhaps have had a lighter task. The claim of him who before he can reap any return must invest a long expenditure in time, and seed, and labour, and tools, might vindicate a year's possession, and a freshly-earned one year by year (and the four or six-course farmer perhaps could urge a still more protracted suit), against that ideal claim of his brother man which has been quaintly described as "the right that belongs to all to take that which belongs to none." * But the more complicated question lies waiting for us yet one stage further, namely, when the phenomenon begins to be witnessed of the severance of ownership from occupation; when the fact stands patent of a process having taken place which has enabled the occupier to *transfer* the right he held to *another*, either wholly—by sale or gift, and the still more potential act of transmission by heritage, or by will—or partially, by lease, or other temporary assignment. In every fully-peopled country a long unwritten history has been acted out, of the gradual acquisition of such rights over the soil; and in most of them there has come, in the natural course of events, a time when the unlanded portion of the growing community have begun to inquire into the cause of their own exclusion, and the "title" of those who have been before them in the race and have got possession.

The student of early Roman history is struck by the reiterated occurrence of those mysterious struggles between the

* The words of Locke are as follows :—"Though the earth, and all inferior creatures, be common to all men, yet every man hath a property in his own person; this nobody has a right to but himself. The labour of his body and the work of his hands, we may say, are properly his. Whatever, then, he removes out of the state that Nature hath provided and left it in, he hath mixed his labour with and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state Nature hath placed it in, it hath by this labour something annexed to it that excludes the common right of other men. For, this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to; at least, when there is enough and as good left in common for others."

richer and poorer citizens, which appear never to reach final settlement ; marking the growth and predominating power of a landed caste, whose domains—extending around the city for miles—gave, in a population so dense and concentrated as that of Rome, a special severity to the Agrarian question, by leaving for the increasing numbers of the State only the more distant and worthless portions of the unappropriated “public land.” So, in the Greek States, “every accession to the number of citizens was followed by a call for a fresh division of the public land ; and as this involved the sacrifice of many encroachments that had grown into vested interests, it was regarded with horror by the old citizens as an act of revolutionary violence. For though the land was the undoubted property of the State, and although the occupiers of it were to the State mere tenants at will, yet it is in human nature that a long possession should give a feeling of ownership, the more so, as while the State’s claim lay dormant, the *possessor* was to all appearance the *proprietor* ; and the land would thus be repeatedly passing by regular sale from one occupier to another.”*

The same tale which finds such faltering expression in those nations that had historians, has worked out its silent but not less actual history in every cultivating nation of the world. Increase of population ; decrease of public land ; the vehement claim of participation on the one hand, the fierce and jealous tenacity of prescriptive rights on the other.

Probably in no other country of Europe so much as in our own—partly owing to its island character, and partly to the succession of distinct races that has gone to form its people and its laws—have the incidents of the land and the institutions connected with it been more truly, in every sense, a history. The forced introduction by the Norman kings of the most oppressive incidents of feudalism, without its better features, broke in upon an ancient landed system which had been growing up for centuries, disjointedly but steadily, in Saxon England, having its roots in the imperishable principles of Roman jurisprudence, that had prevailed here for nearly four centuries, and of which it has been truly said that it “was

* Arnold, “His. of Rome,” vol. i. Dr. Arnold shows that the law of real property in Rome was more advanced than the feudal system in many important features. The proprietor of land was the absolute owner during his life-time, and could bestow it absolutely at his death.

never permanently lost in any country in which it was once established.”* Under the subsequent rule of such men as Egbert, Alfred, Athelstan, and Cnute, there are surviving proofs that the laws and distribution of land had reached a stage of advancement that embodied, with the remains of that Roman polity which “had graven itself in our land,”† some of the most sterling elements of the old Saxon character and institutions.

We must not forget that it is from the pens of Norman writers that most of the ideas we entertain of our native English forefathers at the time of the Conquest have been derived; but ample traces that have escaped the distorting profile of the historian, tend to show that whatever the comparison may seem to us between the personal habits of the conquering and of the conquered race in other points, it would be far from the truth to suppose that the English of the eleventh century had much, if anything, to learn from their Norman invaders, in the laws of the soil. “Norman literature before the Conquest is worthless; their law-courts have nothing to match the splendid series of Anglo-Saxon charters.”‡ There is much that is primitive and simple to be met with, but (apart from the personal habits of the age) nothing of barbarism in the land institutions of Saxon England, unless, indeed, an excessive love for it, and an almost exaggerated deference for its possession may be so classed. In an age when freedom was the exceptional condition, the ownership of land was the mark of a free man, and ample territory the inseparable appanage of rank. The modern Conveyancer’s broad separation between “real” and “personal” estate was strongly marked in the practices of Saxon life, but with far better reason, when the rareness and insignificance of other forms of property gave

* Creasy, “History of England.” During the intervening centuries, from A.D. 82, when Agricola reduced the island, to A.D. 463, when the Legions were withdrawn, the judicial tribunals of the Province of Britain were fashioned on the Roman models. The corporations invented by Roman jurists were the origin of our municipal institutions by which England has always been distinguished. Papinian, the celebrated Roman jurist under Septimus Severus, presided in the Forum Eboraci (York); Ulpian and Paulus are considered by Selden to have occupied the functions of “Assessores” in the tribunals of Roman Britain.

† Pearson, “England in the Early and Middle Ages,” vol. i., chap. ii. “It is scarcely too much to say,” writes Mr. Pearson (p. 51), “that we owe a vantage-ground of six centuries of inherited Law and Culture to our Roman conquerors.”

‡ Pearson. Vol. i., p. 401.

truth and meaning to the distinction. No amount of gold or "chattel" property conferred the franchise; land alone was recognised as the source of all personal privilege, and the basis of civil rank. "There is no trace of such a qualification as constituted citizenship at Athens or Rome; among our Saxon forefathers the exclusive idea of the city had no sway."* In this they only inherited the national character of their Continental ancestors pictured by the Roman annalist with such expressive brevity. "It is well known that the German race inhabit not cities, nor care even to join house to house. They dwell independently and apart, as the stream, the meadow, or the grove may guide their choice."† Centuries have not obliterated these features in their descendants to this day; the love of land, its estimation above all other forms of property, and its political preponderance. It long held, and still in a measure holds, with us, the dangerous prerogative of being its own lawgiver, a power hardly to be trusted to any human hands, without check or counterweight; for even just and conscientious purpose is not always gifted with that reflex capacity which can see in the claims of others the exact portraiture of the same 'rights' it defends as a natural duty for itself.

The characteristics of the English land system before the Conquest are worth careful notice, not only as being the earliest contributions to the history of the land in this country, but as embracing original types of national law and custom, from which it would be difficult to say how large a share of that unwritten code known to our familiar use as "Common Law" is derived. If the materials are not as abundant as those of later time, they are yet so hand-marked as to make up for want of detail by the significance of a few broad outlines. In the first place, it embraced (though with some variations in different parts of the country) those three important rights which together may be said to form the very test of land freedom: 1. The right of alienation, or transfer by sale or gift. 2. The power of disposal by will. 3. That of transmission by inheritance. This is the more observable, at that early period of our national life, because under the feudal rule which succeeded the Conquest, the two first were

* Kemble, "Saxons in England."

† Tacitus, "De Mor. Germ.," c. xvi. The passage is as characteristic of the writer as of the people he describes.

virtually abrogated, and the third completely changed from its original character, so as to subserve only the feudal rule of succession.

In the next place, there existed in a very distinct form that remarkable reservation of public right which found expression in the word "Folc-land," or land of the people, and embodied "the principle of a direct ownership by the community, not in theory only, but to some extent in practice: private property in its more perfect form obtained only over those portions which were granted to individuals by charter, and hence were called 'hoc-land' "* (book-land). This distinction seems almost identical with the "publica terra" and "privatus ager" of the Romans, and marks, with other evidence, the extent to which the principles of Roman law still subsisted. "It was only with the consent of his Witan that the king could make grants of the public domains of the Folc-land. The theory that the sovereign is the paramount proprietor of all land was utterly alien to Saxon ideas and institutions. Such state domains, like the *ager publicus* of the Romans, might be held by individuals as tenants of the Commonwealth, till it was formally made over as private property."† But still, after such appropriation, and accompanying every private estate, *all land* remained subject to three inevitable public charges ("Trinoda necessitas")—1. Military service in (but not always confined to) defensive war. 2. The repair of bridges, and 3, of royal fortresses.

The land-owning class consisted of the Eorls, or larger owners, who held under the crown, and the Ceorls, a much more numerous but independent class.‡ "They are the root," says Hallam, "of a noble plant; the free socage tenants, or English yeomanry, whose independence stamped with peculiar features both our constitution and our national character."§ The limits of land were defined with scrupulous accuracy, and

* See Mr. C. Neate's "Lecture on the History and Conditions of Landed Property," p. 19.

† Creasy, "Hist. of England." "The feebleness of the resistance of so brave a people as the English at the Battle of Hastings is attributed by Mr. Kemble to the discontent and depression of the middle class at the gradual absorption of all the public lands by the great owners of that day."

‡ The Eorl and Ceorel (words whose terminal sound often coupled them in a sort of civil apposition) nearly corresponded to the Squire and Yeoman of a later day. The Thegnes were of a higher order, equivalent to our landed nobility.

§ "Middle Ages," ii. 386.

a Register of deeds and decisions, including mortgages, was kept in the superior courts.* The form of alienation, or transfer, was very simple; but its efficacy was secured by publicity. "Before the Conquest, grants of land were enrolled in the Shire-book, after proclamation made, in public Shire-mote, for any to come in that could claim the lands conveyed; and this was as irreversible as the modern Fine with proclamations, or Recovery."† It might almost shame a reader of our Blue-books on "Sale and Transfer of Land," to find a "Registry of Title," and, what was then almost its equivalent, a "Register of Assurances" existing in the ancient English county courts, while the age of Christendom was yet written in three figures.

The power of disposition by Will appears to have been unrestricted, extending even to oral declaration if formally made in the presence of a sufficient number of witnesses,‡ of whom eight or ten were usually required; and all wills had to

† Gurdon on "Courts Baron."

‡ Hallam's "Middle Ages," ii., p. 393. He gives a very ancient and characteristic Saxon instrument, published by Hickes, recording a suit in a county court.

"It is made known by this writing that in the Shire-gemot (county court), held at Agelnothestane (Aylston, in Herefordshire), in the reign of Cnute, there sat Athelstan the bishop, and Ranig the alderman, and Edwin his son, and Leofwin, Wulfig's son; and Thurkil the White, and Tofig, came there on the king's business; and there were Bryning the sheriff, and Athelweard of Frome, and Leofwin of Frome, and Goodric of Stoke, and all the Thegns of Herefordshire. Then came to the mote Edwin, son of Enneawne, and sued his mother for some lands, called Weolintum and Cyrdeslea. Then the bishop asked, who would answer for his mother. Then answered Thurkil the White, and said that he would, if he knew the facts, which he did not. Then were seen in the mote three Thegns, that belonged to Feligly (Fawley, five miles from Aylston) Leofwin of Frome, Ægelwig the Red, and Thinsig Stœgthman: and they went to her, and inquired what she had to say about the lands which her son claimed. She said that she had no land that belonged to him, and fell into a noble passion against her son, and calling for Leofleda her kinswoman, the wife of Thurkil, thus spake to her before them: 'This is Leofleda my kinswoman, to whom I give my lands, money, clothes, and whatever I possess after my life;' and this said, she then spake to the Thegns: 'Behave like Thegns, and bear my message to all the good men in the mote, and tell them to whom I have given my lands, and all my possessions, and nothing to my son;' and bade them to be witnesses to this. And thus they did, rode to the mote, and told all the good men what she had enjoined them. Then Thurkil the White addressed the mote, and requested all the Thegns to let his wife have the lands which her kinswoman had given her; and thus they did, and Thurkil rode to the church of St. Ethelbert, with the leave and witness of all the people, and *had this inserted in a book in the church.*"

A Nuncupative Will is recorded also in the Domesday of Worcestershire, Consuetudines, Gale, vol. iii., p. 768.

be established in the county court. The right of hereditary succession extended—in accordance with the custom of Gavelkind—to all the children,* differing in this respect from that introduced after the Conquest, which has ever since prevailed in this country. To the ante-Norman Englishman the claim of primogeniture seems to have been unknown.† A practice curiously the converse of it existed, however, in some districts, under the name of “Borough-English,” by which the *youngest* son succeeded to the inheritance;‡ the reason assigned for this preference being that the elder sons would be more surely provided for during the father’s life-time; a ground that may stand comparison with some of the arguments used for our law of succession of the eldest.

It may also be noticed that, upon the death of the son without issue, the father inherited. “By our common law he is absolutely and in every case excluded,” writes Mr. Hallam, in the year 1829, just before this principle was restored to our law, after an interval of eight centuries, thus leaving only one of the ancient English land-institutions unredeemed from feudal change.§

Several features of the Saxon land laws, the relation of lord and “vassal,”|| the obligation of military service, and the reverting of some lands to the State on the failure of male heirs, have led to the belief that an inchoate form of feudalism existed in England before the Norman invasion; and the question has been contested by high authority on both sides. Some negative evidence for the assertion is found in the fact that no new Code of Law appears to have ever been promulgated by the Conqueror, who had sworn at his coronation to observe the laws of his new subjects. But the question is chiefly of antiquarian interest. A sovereign who not only employed his own justiciaries, using a foreign language not understood by the people, but provided the land itself with

* Females were sometimes excluded.

† William the Conqueror’s charter to London provides (as for a point on which there might be apprehension) that the children of an Intestate shall inherit equally. As late as Hen. I. the eldest son only inherited the principal Fief; Boc-land went to the family equally.

‡ This practice has lasted down to historical times in this country; and seems to have been transplanted from England to Brittany.

§ See Freeman’s “Conquest,” vol. i., p. 597; note, on the use of the word “English.”

|| This word is used by Asserius, a contemporary of Alfred. “Middle Ages,” vol. ii., p. 413.

new owners, could afford—and would be not unlikely—to omit the ceremony of a new code. But the opposite opinion seems to be now generally received; and it is strongly supported by the facts of the land having been transferable *inter vivos*, devisable by will, and the inheritance equally shared by the children—features all so opposed to the principles of feudal tenure, that they render the question, for the present purpose, unimportant.

These and most other free and distinctive features of the native land laws were swept away and entirely abolished at the Conquest. William's grants made no distinction of public and private land, and were all made by his own sole will as absolute sovereign, unshared by any Council, and to be held directly and solely of himself as feudal lord. "He formally established the doctrine of the universal supremacy of the Crown, and he exacted the solemn acknowledgment of it by all the landowners of England, at the great assembly which he convened at Salisbury in 1086."*

But he did much more than this. The same system which on the Continent formed a kind of social network of alternate sub-infeudation, shared by the nobles, took the shape in England of an oppressive tyranny of one sole monarch, felt chiefly in the exasperating incidents of "relief" and "wardship" which the Norman kings in succession inflicted upon their English subjects† in place of the free and systematised land-institutions which they had before enjoyed from the time of the great Alfred, and which found their attestation, with their death-blow, in the terrible record of "Domesday Book." That extraordinary work, which, as it sprang from the fiat of the Conqueror, has been attributed to his genius and power, seems, however, to have owed the possibility of its production—accomplished as it was in the course of a few months by the commissioners who compiled it‡—to the organisation which they found ready to their hand in every county and hundred

* Creasy, "Hist. of England." Freeman's "Conquest of England."

† Hallam seems to be of opinion that several of the most oppressive incidents formed no parts of the system, but were invented as well as introduced by the "rapacious Norman tyrants." ("Mid. Ages," ii. 415.)

‡ The orders for it were given by the court held at Gloucester, Christmas, AD. 1085, and the returns were brought to the court at Winchester, at Easter following. The same commissioners did not act for all England. They proceeded by summoning before them the sheriffs, lords of manors, parish priests, bailiffs, &c., to give an exact account of the land, whether wood, pasture, or tillage, &c. In some cases the live-stock were enumerated.

of the kingdom; an organisation framed upon the accurate definitions of land in Anglo-Saxon charters, and county court Registries, both based on ancient principles of public right and record (of which the county court was the local centre), and justifying the bitter regrets with which the nation, after it had bowed to the exactions of its Norman rulers for a hundred and fifty years, down to the reign of Henry III., still looked back to its ancient land freedom, under the never-forgotten title of "The Laws of Edward the Confessor."

"It is remarkable," says Hallam, "that although the feudal system established in England upon the Conquest broke in very much upon our ancient Saxon liberties, though it was attended with harsher servitude than in any other country, yet it has been treated with more favour by English than French writers." The explanation of the paradox is to be found in the concurrent history of two things that would seem incompatible: one, the grandest code of personal and civil liberty; the other, the most complicate and technical system of real property law ever exemplified in one and the same country.

As the Conqueror had constituted himself sole lord of the land, and denied to his nobles all that participation which on the Continent made each lord a petty sovereign and tyrant, the barons of England were gradually drawn into sympathy with the demands of the people, as Magna Charta soon nobly attested; and from that time the real sting of feudalism ceased to be personally felt by the English commonalty. But as all law proceedings, and all clerkly learning, were in a foreign tongue—the Norman-French—none of the learned class was willing, and no layman was able, to draw comparisons in favour of the ancient landed liberties, against the system in which they were now taught, and to which all their learning and all their prejudices leaned. And thus, while in matters affecting the general liberty of the realm, the commonalty profited by the power, and shared many of the privileges, of the nobles—wrung from William's successors, and strengthened by repeated confirmations of the Great Charter—the evil seed of landed feudalism planted by his hand, and screened by its language from popular intelligence, produced its evil fruit; and the tyranny of "relief" and "wardship" continued, through successive centuries, to generate a systematic growth of "legal legerdemain" to escape their burdens—a complete science of

fiction and evasion—which still, unhappily, characterises the laws that govern real property in this country.

But as “virtue cannot so inoculate our old stock but we shall relish of it,” the vestiges of English liberty and the perseverance of English resistance contrived to retain a large portion of the land under the modified and freer tenure called “common socage,” in which, though the feudal bond existed, its exactions were pecuniary, instead of personal and military. This form of tenure was preferable in so far as it altered the character, though without getting rid of that feudal dependence whose essential element was *an enduring personal relation which no time released or affected as between the lord and his heirs on the one side, and the tenant and his successors on the other*. The power of alienation was, however, withheld, and the primogenitary succession substituted, though not so universally, for that of equal inheritance. Indeed, that mode of land-succession was the keystone of feudal tenure; for the power of alienation *during life* by the tenant in tail, though nominally forbidden, was in the smaller fiefs connived at, on the condition that the lord was not deprived of his rights. Provided there was an eldest son to succeed to the duties and services of the fief, it did not greatly matter *whose* eldest son it was; and the practice grew up of bespeaking the acceptance by the lord of the new tenant, during the life of the old one who wished to retire.

This practice did not extend to the tenants of the crown (*in capite*), but it became sufficiently general to lead to the enactment of two important and well-known statutes passed in the reign of Edward I.: one (*de Donis conditionalibus*) which prohibited the collusive alienation of “estates tail,” by which the lords had been deprived of their forfeitures on the failure of heirs; the other (*Quia Emptores*), passed five years afterwards, which, while appearing to legalise alienation, reclaimed the right of the superior lord against the attempts of the tenant to substitute *himself* as lord to the new purchaser, and reimposed on the land the same rights of lordship to which it had been subject in the hands of the vendor.

These two statutes for nearly two centuries crushed the growing effort to emancipate land from its feudal fetters, at least by open alienation; and had the further mischievous effect of making the position of the unfortunate tenant in agriculture more insecure than ever, as no leasing power of one tenant-in-tail was binding on his successor. Thence, all good

farming betook itself to the monastic houses, whose Mortmain lands became the fixed asylum of agricultural knowledge and improvement. Certainty of tenure out of doors, and the classical writers on husbandry studied and transcribed within, told powerfully upon the soil, and were draining and redeeming into cultivation the fens and marshes of Lincoln, and Somerset, and Sussex, while elsewhere the pressure of feudal exaction upon the fee-simple proprietor, and the insecurity of the farming tenant, even under lease, reduced cultivation to its most precarious and servile condition, and dwarfed the agricultural growth of the kingdom. The remedy for the effects of these statutes was gradually found in a practice which drew from the machinery of the law the instrument of its own evasion by means of what was called a "Common Recovery."

This ingenious but surreptitious mode of transfer seems to have owed its invention to the churchmen, in order to evade the statute against Mortmain appended to the re-issue of the Great Charter in the ninth year of Henry III., and consisted in the artifice of inducing liberal or superstitious landowners to become defendants in collusive lawsuits, in which the ecclesiastical plaintiffs sued for and recovered the lands as their own, no defence being made to their claim; and these mockeries of law, as well as justice, received the sanction of the courts, equally to the disgrace of the clergy who instituted and the judges who allowed them.

But of all the manifold inventions which grew up under the pressure of feudalism, the most fertile of ambiguity was that by which the ownership of land, while nominally vested in the hands of several proprietors, was secretly transferred to the "use" of another person, who was thus enabled to enjoy the beneficiary ownership without being liable to forfeiture, or the onerous charges of relief and wardship. Down to the time of Henry VIII. this practice had so increased that, by its means, a considerable part of the kingdom had contrived to get rid of some of the worst inconveniences of feudal tenure.*

One evasion generates another; and the adoption of "Uses" was out-manceuvred in its turn by a statute passed in

* In the courts of common law the "Use" was a nonentity; and so it escaped the Mortmain Statutes. But the Chancellors (who were almost invariably ecclesiastics), acting upon the fiduciary principle introduced into Roman jurisprudence (to escape the harshness of the Voconian law U.C. 584), gave it validity, as binding on the conscience ("fidei commissa"); and on the same principle, "*Cestuique Trust*" afterwards succeeded to "*Cestuique Use*."

the twenty-seventh year of that reign, by which the beneficiary owner of the "Use" was drawn from his retreat, by the two estates being thrown into one, that is, by investing the owner of the Use with the "legal estate." And henceforward the machinery that had been employed in the creation of the Use was adopted for the transfer of land by *Deed without publicity or registration*. Thus our whole present system of unregistered conveyances is derived from an original fraudulent evasion of the law; "an objection of no great weight," observes Mr. Neate, "as so much of the law of real property rests on no better foundation."*

Nominally, this solidification of the Use into a tangible "legal estate" again subjected the land to its old feudal liabilities. But that iron grasp which, rising out of the decay of Roman power, had reached over the greater part of Europe, holding the minds and liberties of nations with a force so wonderfully concentrated—wonderful even when looked at from the advanced social organisation of our own day—had begun to relax its hold. No better proof of this can be seen than in the fact that only five years after the Statute of Uses, the Act was passed (32 Hen. VIII.) which is commonly said to have given, but in truth *restored*, the power to devise lands by Will. As this power, which had freely existed before the Norman rule, was extinguished by the practice of primogenitary descent—with which it was of course incompatible—it would have been right that, on its restoration, the ancient English rule of equal division in case of intestacy should be also restored; as the system of exclusive heredity, though no longer required for feudal objects, could now be created at pleasure by Will. This, however, will be more fully considered presently. After an attempt to resuscitate the feudal claim of the sovereign by Charles I. in his struggle with the Parliament, military tenure was finally abolished in the first year (legally the twelfth) of Charles II.

What, then, was the actual condition in which the formal extinction of feudal tenures left those laws that govern land in all that is implied in its modern relation to the uses of society? This is the anxious question, above all others, of the agricultural owner and occupier, whose interests are so fundamentally, yet often obscurely, affected by the silent operation of the

* "History and Conditions of Landed Property."

principles which regulate the distribution of the soil. And, first of all, what was the condition of the law especially in the three points before named—the power of Alienation, of disposal by Will, and of Inheritance?

With regard to the first, the early simplicity of transfer accompanied by public registry, and even the later forms of Seisin and Enfeoffment, had become substituted by secret conveyance, through the instrumentality of private deeds, whose language was cast in the forms and phraseology derived from the reiterated struggles of ecclesiastical and legal ingenuity against feudal and statutory restrictions.

"Fine and recovery," "conveyance to uses," "lease and release," all the circuitous forms that evasion had been compelled to assume, survived, together with the whole storehouse of factitious science that had grown up around them. Once launched into existence, the system of private and unregistered conveyance had generated a science and vocabulary applicable to the numberless "estates" created in land, which made every "title" a matter of intricate *personal* history; hence arose the necessity of investigations requiring the most practised and recondite knowledge of the old body of statute law, which feudalism, though extinct, had left behind it; and demanding a long train of evidence, traced in full upon the instrument of conveyance, of all the "dealings" that had occurred to the "estate" of the vendor, for, at least, the period of human life; indeed, the right of bringing "real actions" (suits for the recovery of land) far exceeded this limit.

It would be a hopeless and presumptuous task to attempt to present, in a popular essay, even a sketch of the history of all the various "estates" upon which land was held, each a study in itself, and which necessarily entered into the question of title, when once *that* was divorced from the public evidence which had guarded its simplicity and security. The mere epitome of all the various doctrines of legal and equitable estates, of seisins, of uses, of trusts executed and executory, of powers at common law, and in equity, of terms of years outstanding and assigned, of mortgages, of all the complex interests, often fictitious, and even contradictory—by which "the same person may be at one side of Westminster Hall the *owner*, and at the other a *trespasser*"—which form the Real Property Law of this country, would awaken in the mind of the reader a kind of despair that might well take the form of

Rasselas's exclamation after hearing Imlac's catalogue of the requisites to make a Poet. "Enough! no man can be a Vendor, or a Purchaser; or a Conveyancer! proceed with thy narrative." Those who are most deeply versed in the intricate science that grew out of so many centuries of conflict between land in its feudal sense, and land in its modern development as the basis of all industry, the source of all wealth, will, perhaps, least wonder at the slow and partial emancipation, witnessed even to our own day, from that state in which the extinction of military tenures left it two centuries ago.

Five bulky volumes of blue-books, reaching from 1829 to nearly the present date, record the labours of the Real Property Commissioners, who from time to time have entered upon this Herculean task. The limitation of "Real actions," the earliest result of their inquiry, and which held out the promise of a title by twenty years' possession,* reserving the five exempted cases of infancy, coverture, idiotcy, lunacy, and "beyond seas," proved, for practical purposes, a failure. No conveyancing skill or human foresight could insure a purchaser against the eventualities that might be lurking in the ten years' reservation accorded to this formidable list of excepted claims. Capital is proverbially timid; and the fear suggested by the self-interested alarmist, is more easily awakened than allayed. The abolition of Fines and Recoveries,† of the assignment of Outstanding Terms,‡ and of the Lease and release,§ have done something to simplify the form and language of the deed of conveyance, but not much towards the shortening of "titles," from which conveyancing practice abates little if any of its claim for the exhibition of a title on the part of a Vendor, or Mortgageor, for a period equivalent to the life of two generations.

So early as at the time of the Restoration this uncertainty of the titles to estates was stated as "one cause of the decay of rents and value of lands,"|| and at the date of the report of the Commissioners on the Registration of Title (1857), upwards of twenty bills had within twenty years been brought into Parliament in order to establish a system of Registration; and a Select Committee of the House of Lords appointed to inquire into the burthens upon land, attributed the diminution of its

§ Ibid. c. 112.

marketable value to the *tedious and expensive process attending its transfer*, and asked for a "thorough revision of the whole subject of conveyancing and the disuse of the present prolix and vexatious system."

The problem has not been suffered to sleep, and has been taken up by Chancellor after Chancellor, as if the highest station of the legal profession had come to recognise the task as a challenge to its corporate conscience; and the names of Cairns, of Westbury, and of Hatherley are each associated with the noblest efforts to remove an evil, of which neither the existing Land Register in England, nor the Landed Estates Court in Ireland, have furnished any permanent abatement. Individual practice defeats in detail the permissive operation, in the former case, of an Act which was soon found to offer a remedy that, like Inoculation, has *too much of the original disease* for safe or profitable use; and titles gather again the parasitic evils from which they were temporarily freed (once for all as it was vainly hoped) in the latter. The same disproportionate cost, delay, and repeated investigation for every fresh transaction of sale or mortgage remain practically as they were; impressing the public mind with the feeling that he who enters upon the sale or purchase of land must do so under the warning that he is indulging in something that has many of the features of a *Law-suit*, of uncertain cost, duration, and result, through the operation of a system as opposed to the simple forms of antiquity, as it is to the broad stream of modern thought and procedure in all the transactions of business and of social life.

It would be incredible, if it were not true, that at a time when personal property changes hands at the Banker's clearing-house in London at the rate of four *billions* sterling in the twelvemonth, the title to land, which of all things on the face of the earth—being itself a definite portion of that face—ought to be capable of the most clear and patent evidence, is locked up in private boxes and stowed away in uninsured offices, to be doubtfully educed from the perishable evidence of MS. deeds, written (in the fifth century since the invention or printing) in language requiring sometimes the translation, sometimes the deciphering, but always the interpretation of an expert.

But the transfer of land is beset by a class of difficulties more deep-rooted in obstructive power than those presented

by prolixity of deeds, or the fossil forms of an extinct system and vocabulary, or even the growing canker of unregistered title. The early history of Entail, as it insidiously grew under the pressure of feudal exactions and forfeitures, though checked by the device of Recoveries, and shattered for a season by Henry the Eighth's Statute of Fines, stood forth when feudal tenure had disappeared, in the form of a perfected plan and science, around which had gathered an elaborate network of factitious rules and principles, woven by the subtle machinery of evasion. The scaffolding fell away only to reveal an edifice that had been growing up within, shaped for the accomplishment of a self-renewing perpetuity by means of what has been called "a dualism of proprietorship." By this system the property in land was divided out to several persons with estates "for life," and in "remainder," so as to prevent the possibility of alienation until not only the whole of the lives existing at the time of making the settlement, or will, had dropped, but until the *unborn child* of one who was then an infant had attained twenty-one years of age ; so, in fact, as to extend the entail ordinarily for fifty, but possibly for eighty or even ninety years. In common parlance—for the practice is that now in force—estates in land may be settled upon any number of lives in being, *and twenty-one years afterwards*.

It is needless to say that this posthumous power of entail, which is now peculiar to this country, is looked upon with as many differences of opinion as there are points of view from which it may be regarded. Lord St. Leonards, describing it from the lawyer's standpoint, says, "The present plan of a strict settlement, within reasonable limit, enables the owner to transmit his land *to all his posterity*, and from its very nature leads to successive settlements ;" in another passage he remarks that "our law admits no dispositions which *tend to perpetuity*." The apparent contradiction resolves itself into the meaning of a word. That which is tied up to all posterity *from within* is a perpetuity as against all except the settlor (or testator) and his successors.

"One would suppose," writes Mr. Fowler, "that the law of England, instead of 'abhorring perpetuities'—to quote its quaint language—really cherished them with a peculiar veneration . . . in so far as the law permits a man, by his will, or by deed made in his life, to direct how his property shall be held when he is resting in his grave. Viewed in the abstract, the existence of such a power is a strange thing. . . . But those who most highly approve of giving an owner this power must admit that it

should have a limit, and that it would be intolerable that the dead man should speak for ever. . . . In practice the usual custom is to settle an estate on the father for life, then on the son for life, with remainder in tail to the unborn child of the son. When the grandson comes of age the land can be again settled, and his interest changed to a tenancy for life, with remainder to his unborn child, as before. By this system of settlement and re-settlement it is obvious that a property can be retained in the same family generation after generation, the owner in possession being, in general, only tenant for life, with no power of disposing of the family estate.* †

Another writer, referring to this family settlement and re-settlement as a "solemn appeal from one generation to the next," complains that "the common interest of the nation should be unrepresented in the more than diplomatic privacy of this negotiation between father and son. But, on closer examination, the supposed solemn appeal to each generation dwindles to a hasty compact dictated by somewhat sordid considerations of a momentary interest, to which the law lends the sanction of irrevocability."†

The ground of chief complaint, however, is not that the law should sanction the settled transmission of wealth within the statutory limits, but that the medium of the posthumous settlement should be an article of limited supply, upon which the nation has a just claim that its capabilities should not be dwarfed by that contraction of living power which settlement usually implies.

The important question which the demands of agricultural progress, since the great expansion given to it by the changes that have followed upon free trade, have of late years brought into prominent discussion, is how far this system is beneficial to all the parties interested in the soil, including the Landowner himself, the agricultural Tenant, the Labourer, and lastly, the Community at large, to whom none will deny an interest in the productiveness of the land, as well as a reasonable claim in respect of its freedom of purchase.

It will be convenient to consider these under their separate heads.

With regard to the first—that of the Landowner—the act of re-settlement is thus described by Lord St. Leonards:—

"Where there are younger children, the father is always anxious to have the estate re-settled on them and their issue, in case of failure of issue of the first son. This he cannot accomplish without the concurrence of the son;

* "Thoughts on Free Trade in Land," by William Fowler, LL.D., M.P.

† "The Land Laws," by W. L. Newman, Esq.

and as the son, upon his establishment in life in his father's life-time, requires an immediate provision, the father generally secures to him a provision during their joint lives, as a consideration for the re-settlement of the estate in remainder upon the younger sons. Thus are estates quickly re-settled."

This is the abstract view of the matter, as it appears to the eye of the lawyer, and, in point of form, commonly occurs. It is right, however, in the interest of those most nearly concerned, that the practical operation of the system should be viewed from all sides.

"Take the case," writes Mr. Cliffe Leslie, "of an ante-nuptial settlement in which the son joins with the father. It is commonly supposed that the son acts with his eyes open, and with a special eye to the contingencies of the future, and of family life. But what are the real facts of the case? Before the future owner of the land has come into possession—before he has any experience of his property, or of what is best to do, or what he can do, in regard of it—before the exigencies of the future, or his own real position, are known to him—before the character, number, and wants of his children are learned, or the claims of parental affection and duty can make themselves felt, and while still very much at the mercy of a predecessor desirous of posthumous greatness and power, he enters into an irrevocable disposition, by which he parts with the rights of a proprietor over his future property for ever, and settles its devolution, burdened with charges, upon an unborn heir." *

The same features have been thus described by another writer :—

"No sooner does a Tenant in tail come of age, than in numerous instances he is urged, by those whose influence is irresistible, to cut off the entail, to re-settle the estate, and to fasten upon it the debts of his ancestors. In fact, he is invited to pay for the extravagance of a father or grandfather, who has often done worse than nothing for the condition of the family property. . . . It may be fairly made a question, whether so young a person should be by law capable of binding himself in so important a transaction. This law is open to two serious objections: one, that a young man executes a solemn act, deeply compromising his fortune, when as yet he cannot understand its consequences; the other, that the weight of hereditary debts, which he thus fixes upon himself, may crush all his efforts and disappoint all his intentions to improve the cultivation of his estate." †

The words of one more writer shall be quoted, who has had better opportunity than most men of forming a practical judgment from eye-witness experience throughout the length and breadth of the land, as to the effects of long entail upon the proprietary classes of this country.

"Much of the land of England," says Mr. Caird, writing

* *Fraser's Magazine*, February, 1867.

† Letter to the Right Hon. Sir Charles Wood, Bart., by Frederick Calvert, Esq., Q.C.

just after the conclusion of his survey through the agricultural districts in 1851—"a far greater proportion of it than is generally believed" (by the evidence before Mr. Pusey's committee the estates under settlement were estimated as exceeding two-thirds of the kingdom)—"is in the possession of tenants for life so heavily burthened with settlement encumbrances, that they have not the means of improving the land which they are obliged to hold. It would be a waste of space to dilate on the public and private disadvantages thus occasioned; for they are acknowledged by all who have studied the subject, and seriously felt by those who are affected by it. A neglected property in this country, the *nominal owner* of which is incapable from his embarrassments of improving it, will not be looked at by tenants of capital; and tenants of limited means on such a property must be overborne in unrestricted competition with farmers of capital, cultivating land where every convenience and accommodation which an unencumbered landlord finds it his interest to give has been supplied."

The reactive and life-like nature of the soil makes it a tell-tale, in the long run, of the laws under which it is placed, and by which it is governed. And it cannot be made the subject of unwise legislation in the hands of the Owner, any more than of bad husbandry in those of the Tenant, without developing results which reach, unhappily, beyond these classes, to the injury of all connected with or employed upon it, though innocent (as in the case of the labourer), and even ignorant, of the originating cause of the mischief. The trust which its ownership brings, as well as its occupation (if these are divided), is enforced by penalties as inexorable as those of natural law. The pressure of the responsibility increases with every step in agricultural advancement, till the rights of one age become the wrongs of another. Modes of settlement, carving out the proprietary interest into a series of limited estates "for life," and "in remainder," each in succession barren of power and of motive to meet the wants, the improvements, the discoveries of the time, present a very different aspect now to the same thing before the rivalry of the farm was a world struggle. The increased energy and activity of the tenant demand the outlay of capital by the landlord before his own can be safely thrown into the partnership; for such the relation practically is in England, and such it must become wherever the English system prevails. The "expenses" of land are the familiar theme of

every man of business. Nothing is more common than to hear the wealthy and unfettered fee-simple owner complain of the voracious demands of his *landed* property, for buildings, draining, cottages, and other necessary improvements exacted by the time; and those who give most attention to the debtor and creditor history of their estates are best alive to the fact that landed property has become more like a Business than a mere Income. It is so: and, in a certain sense, it ought to be so. The soil was not meant for idle enjoyment even by its unoccupying owner. The dilemma of land without the capital to meet its claims exactly opposes the original object of "the Settlement," for it harnesses the fettered with the free, and endangers a catastrophe by the very links that were forged to prevent it. Yet this must inevitably be the case under a system where entail, extending to the unborn, permits, and may even be said to encourage, the inconsistent practice of at once burthening the estate with all the charges of "the family," "the creditor," and its own expenses, and tying up the hand of the heir upon whom the whole administration must devolve.

It is difficult under such circumstances to resist the conclusion which declares itself against that part of the practice of entail which assumes the impossible foresight of *the unborn*. "Any number of lives *in being*" is a phrase that suggests the obvious limit of human prudence; and, in the settlement of land, has the advantage of presenting the principle of a natural term, where the responsibility, and with it the right, of each generation ends.

That the practice of family settlement should be reconciled with the fullest development of the estate is of the utmost importance, if only because it constitutes the modern substitute for the feudal rule which devolved the inheritance of land upon the eldest male. This law has survived the system to which it owed its introduction into this country; operating, indeed, now only in cases of intestacy or disputed claim, but exercising a mischievous influence in propping up the barrier which the great innovator Time renders every day more artificial and absurd between "real" and "personal" estate, and dishonouring an old and favoured national *custom* by the retention of an exclusive and invidious *law* in the case of land, in the face of equal division in every other form of property.

So long as land, in its feudal relations, was a thing out of commerce altogether—when Commerce itself had scarcely an

existence—no special inconvenience resulted from laws restricting its alienation or its succession; but when, in the progress of national wealth, it has lost its speciality as the only “property,” and has become simply one of the forms of invested wealth, the incoherence of two principles of succession, one of which recognises no difference of sex or order of birth, like our law of personal intestacy, while the other devolves the whole inheritance upon the first-born male, produces endless litigation, intricacy of legal distinction,* and even uncertainty of decision, that will hereafter be looked upon as one of the most curious episodes in the judicial history of this country. “No human laws,” says Blackstone, “are of any validity if contrary to the law of nature; and such of them as are valid derive all their authority mediately or immediately from this original.” But next to a law based on no principle at all, the worst conceivable is one that attempts to embody two conflicting principles into one code, confusing the public sense of right; for what is law, if it be not a Rule of Right, its index-finger clear for all to read, and not pointing two ways?

Volumes have been written, the highest authorities in political economy appealed to, proposals made Session after Session in the House of Commons, the practice of every civilised country in the world cited, in order to remove this straggling relic of an extinct system from our law. The prevailing influence which has deferred its removal, has been

* See the case of Ackroyd and Smithson, Brown's Chancery Cases, vol. i., p. 505. See also Jarman's Powell, 77, 78, *et seq.*

The following is Lord Eldon's own account of the judgment in the celebrated case which has governed so many nice questions of “real,” and “personal” property.

“Might I ask you, Lord Eldon,” says Mr. Farrer, “whether Ackroyd and Smithson was not the first case in which you distinguished yourself?”—“Did I never tell you the history of that case? You must know (he replied) that the testator had directed his *real estates* to be sold, and the residue to be divided into fifteen parts, which he gave to fifteen persons named in his Will. One died in the testator's life-time. A bill was filed by the *next of kin*, claiming the lapsed share. A brief was given me to *consent for the heir-at-law*. * * * So I went into Court, and when Lord Thurlow asked who was to appear for the heir-at-law, I rose and said modestly that I was; and as I could not but think that my client had the right to the property, if his Lordship would give me leave I would argue it. And I argued that the testator had ordered this fifteenth share to be converted into *personal property*, for the benefit of one particular individual, and that therefore he never contemplated its coming into possession of either the next of kin, or the residuary legatee; but *being land* at the death of the individual, it came to the *heir-at-law*. Well, Thurlow *took three days to consider*, and then delivered his judgment in accordance with my speech.”—*Twiss's Life of Lord Eldon*, i., 119.

the fear of the subdivision of land by the breaking up of estates. As things suggest their extreme opposites by a well-known natural law, this fear has been intensified by that portion of the Code Napoléon which, on the other side of the English Channel, has parcelled out French soil by a law which subjects the testamentary power of the parent to the number of his children, dividing his estate accordingly. This arbitrary *morcellement* is pictured as the inevitable alternative ; as though the interspace of freedom and true principle which lies, broad as the channel itself, between the two, were lost to sight or had no existence. Hasty and unfounded assumptions of evil results from "peasant proprietaries" are readily accepted, which, if true, would be immaterial to the question of the removal of a law which, anomalous itself, can only come into operation by intestacies, which its abrogation would render still more rare ; a law which, when it does operate, "makes a will for a man which any one of its supporters would deem it an insult to be accused of making for himself."* They who really value the *custom* of primogeniture—a practice in this country centuries older than that law, and likely long to survive it—should, in true consistency, banish from public view its hideous effigy, which presents the hard lineaments of exclusive heredity in the most revolting form—that of disinheritance to all but one, leaving the widow, the helpless daughters, and the other sons destitute. Its condemnation is pronounced by nothing more strikingly than by the practice of the primogenitary class, for no well-drawn settlement ever omits to make provision for the widow and the younger children.

It is the unfortunate peculiarity of laws governing the distribution of land, that their effect upon the life and welfare of the community, unlike those causes which directly touch the personal freedom or convenience of individuals, is often obscure, lying remote from their consequences ; like that class of poisons which, received into the circulation, enter the tissues of the body without detection, to be recognised only in the concrete form of diseased structure. The evils are slow of cure that reach men thus indirectly, and have to wait upon opinion. Such is the character of this law. It passes innocuously through the upper stratum of large proprietors, where the absence of family entail—its almost universal substitute—is extremely rare ; where it alights, when it does so, is generally

* Mr. W. L. Newman on the Land Laws.

upon those small and unpretending acreages, whose owners have found it possible to marry without a settlement and die without a will, a class of proprietors upon whose surviving families it works the greatest hardship, and who are often as ignorant of its existence as they are innocent of primogenitary intention. The instances of singular hardship among such intestates cited by Mr. Locke King in his repeated introduction of the Bill to the House of Commons, have been sometimes met by the trite reply that "extreme cases make bad law." The converse is the truth here ; it is the bad law, and only the *law*, that makes the extreme cases ; and its extinction would obviate a scandal to our landed system which rarely, if ever, arises under the operation of the custom of Primogeniture as arising by deed or will.

It may be hoped that the majority ultimately obtained in the House of Commons, in favour of the Bill which Mr. Locke King has so consistently kept before the Legislature indicates a change of view not confined to the mere narrow issue involved in the clauses of the Bill. The popular arguments which enter into the debate have often obscured the far more important question that is involved, forming, as this law does, the basis of the obsolete distinction expressed in the words "real" and "personal," a distinction more correctly indicated by the terms movable and immovable, which have passed from the Roman law into other European systems.

But if the "limited ownership" resulting from our system of entail be unfavourable to the investment of capital by the proprietor, it is yet commonly thought that under the security of a Lease there is nothing to prevent it on the part of the occupying Tenant. Most well-drawn settlements contain leasing powers extending to twenty-one years ; and it is often said that the freedom of contract between the owner and occupier leaves the parties at liberty to make what arrangements they please. But even here one of the worst vestiges of feudal law meets us again. By the statute of Gloucester (6 Edw. I.) the maxim was established, *Quicquid plantatur solo, solo cedit*, which took away all claim of the tenant over every addition he had annexed to or incorporated with the land the moment that his interest, whether yearly or by lease, expired. Under the misapplied name of "Waste," he was even forbidden to erect any building upon land where there was none before, or to convert

one kind of edifice into another, even of improved value to the estate. Exceptions were soon made, after the passing of the statute, in favour of Trade, and Lord Holt is reported to have said that trade fixtures were even recoverable by Common Law.* But the statute has always operated with full severity against the tenant in agriculture, whose property is thus confiscated in any engine or machine annexed to the soil, though for the express purposes of the farm, and without which it could not be profitably occupied. It would be difficult to conceive a law more injurious to the very party in whose favour it was made; and probably there is none in the whole range of land legislation by which *the proprietor* has suffered more loss than by this. The temptation to outlay upon land by the occupier, even under short leases, is always disproportionately great—far beyond what the tenure seems to justify; and, generally speaking, no one knows so well as himself what is required. A law the very opposite to that above referred to, and encouraging a regular system of valuation for addition and improvement by the tenant, would be the most salutary for the interests of all parties, and would have added millions sterling to the landed wealth of the country. It would hardly be too much to say of this statute that it has lain like a cankerworm at the root of the whole question of landlord and tenant, wherever that question indicates adverse instead of united interests. It is obvious almost to a truism that, next to the occupation of the owner himself, the occupation that *most resembles ownership* must, by the imperative laws of the soil, and equally of human instinct, be the most profitable to both parties by the *uninterrupted* progress of improvement and addition to the land. The expense of keeping up a high state of cultivation is small, compared with that of *restoring* it; and the national loss is almost incalculable which the “beggaring out” of farms has occasioned under the influence of the motives brought into action by this law. No tenant, even under lease, would lay out money in improvements which he must leave behind him, on the estate of another, unless he felt sure of such increased profits during his term as would repay him; and therefore it is that under short leases and yearly tenancies the land is rarely cultivated to its full extent. Moderation of charge in case of

* *Elwes v. Mawe* 2 Smith L. C. and Notes. See also the Judgment of Lord Hardwicke in *Lawton v. Lawton*, and of Lord Kenyon in *Penton v. Robart*, 2 East 90.

actual change of tenancy would be generally insured by the fact that every addition made by the occupier is far more valuable *in situ* than after removal. The recommendation of the Real Property Committee of the Law Amendment Society was strongly in favour of an alteration of the law in this particular. The words of their report on this point state :

“That the law with respect to things affixed to the freehold is different, and more beneficial to the tenant as regards the annexations made for the purposes of *trade*, than those made for the purposes of *agriculture* ; an outgoing tenant being permitted in many cases to remove the former when erected by himself, but not the latter.”

The practical effect of what may be called the feudal law of Fixtures, as still subsisting, is that the parties to the supposed contract meet each other scarcely upon fair and equal terms. A lease even for twenty-one years underlain by a law that confiscates to the lessor whatever is left unremoved or (to adopt the infelicitous expression of common use) *unexhausted* upon the land by the lessee is somewhat deceptive in operation, because it includes in the term those years near its effluxion during which productive outlay has to be withdrawn, and the “mill works half time ;” and of necessity restricts all investment to that which can be withdrawn within the term. The evidence of one of the witnesses (Mr. Owen, a Berkshire land agent) given before Mr. Pusey’s Committee on Agricultural Customs put this matter in a true light :—

“I am convinced of this, that where landlords cannot make improvements, there are so many cases where the tenant has the means of making them, that he could make them very much to his advantage, and very much to the landlord’s advantage ; because I consider that, under the present system in our country of letting farms, farms are what we call ‘beggared out.’ There is not a farm that I have re-let, but every tenant who has quitted has taken everything out of the farm that he possibly could. If a system could be laid down where that never could be allowed to be done, and any outlay that the tenant had made upon that property, whether they were improvements by building or manure, he should have the certainty of being repaid for them, I think the benefit would be immense, both to the landlord, and the tenant, and the public.”

Under the existing system operating over the greater part of the land in this kingdom, it is a difficult matter to say who there really is possessing such an interest in the soil as to enable or even justify the full amount of profitable investment. The ostensible

owner, usually a tenant for life, cannot make it for the reasons before noticed; the remainder-man cannot make it, because he is not in possession. The "tenant-farmer" cannot do it, because he, at best, is only a holder for a term of years, which every year brings nearer to its conclusion. The whole system of landed settlement is founded upon laws and habits unconnected with the needs of modern agriculture.

To an *occupier*, whether of lands or tenements, life-tenure is the one which offers the highest inducement to make every necessary outlay and improvement. The uncertainty of life is one which each individual construes favourably to himself, under the influence of that useful feeling, which has been said, with as much truth as poetry, to make "all men think all men mortal but themselves." But to the owner who is *not* the occupier, the case is exactly reversed: here the calculation of life operates for the avoidance of all that diminishes the *annual return*; and even necessary repairs are apt to be postponed. On the other hand, a lease for years, even though the term may exceed the probable duration of the life of the lessee, is always looked upon in reference to its effluxion; the average "expectation" (to use a technical expression) of a 21 years' lease is only 10½ years.

Now, by the system procured in agricultural tenure both these principles of action are violated. The occupier, holding for a period which the law recognises only as a chattel interest, is dissociated from that desire of improvement common in the case of a life interest; and the life-owner, uninterested in the occupation, finds his account to lie in a direction equally negative to permanent investment.

Such is the formal position of the parties. The varieties of circumstance and locality modify it greatly; and the ordinary amount of capital employed in farming where drainage and other improvements are not required, enables the system to work smoothly enough to hide the defects of the machinery. But where heavy outlay is required—as where embankments, arterial and other drainage, inclosure, expensive irrigation, road-making, and other permanent additions are needed—the want of a capitalist soon discloses itself. It would be impossible, under such circumstances, to undertake any work of heavy and protracted outlay where the annual returns did not, as in a farm, meet, if not far exceed, the current outlay. Government drainage-grants and land-improvement companies thus rose

up in evidence that life-tenure forbids the employment of capital upon settled estates.

The immediate benefit conferred by the machinery of these grants is no proof of the political wisdom of the system. The work is done; but the relief, like that known to medical science under the name of local remedy, is followed by a recurring "local liability." The power to follow up the enlarged business growing out of the loaned investment will, in most cases, devolve upon the tenant. That a public company, itself borrowing public money, should have to be invoked to help a landowner to carry on the business of his own estate offers a singular commentary upon the state of English land-law to a person uninformed of the cause. Wherever a series of supplementary devices is needed to meet a law at variance with the time, it indicates the under-current of another law struggling against worn-out barriers that will not long be able to withstand it.

In no other country is there known to exist any parallel to the system of land tenancy prevailing so commonly in England, by which the relations between the owner and occupier are comprehended in the expressive phrase, "a good understanding." It has been construed severely by some as a compact of selfish interests; politics and game on one side, undisturbed tenure and rent on the other, and stigmatised as a sorry substitute for Leases. More favourable critics have seen and eulogised in it the evidence of a mutual trust rarely exemplified, and equally honourable to both parties in the unwritten contract. It scarcely merits either the blame or the praise. Leases were common upon most English estates down to the period of the War at the close of the last century, when the extraordinary and rapid rise in the prices of produce and value of land took place, and continued to advance throughout the war, causing a complete disruption of all previous calculations. The collapse that occurred at the close of the war in 1815, followed by the extreme uncertainty which marked the Corn Law period of the next thirty years, sustained the interruption, though from an opposite cause. Yearly tenancy thus became, for more than half a century, the almost inevitable alternative of a period when agricultural prices, and political apprehensions, alike uncertain, scarcely allowed of any but provisional terms; and tenants as well as owners were willing to stand loose from permanent engagements, not knowing what a year might bring

forth; believing that no skill or foresight could reduce future prospects to calculation for the fixed and unelastic terms of a Lease. The Corn Law question is gone; but the "good understanding" survives the causes that gave it origin. It has, however, this defect, that as it offers no banking security, it increases the dependence of the English as compared with the Scotch tenant, and the analogy which in this respect exists between his own holding and that of the owner who has to play the banker's part. In both, the nature of the tenure discourages the outlay of private capital by those who possess it, and prevents the employment of loaned capital by those who would borrow it. The effect of this upon the condition of the Labourer will be presently noticed.

In Scotland, the predominance of leases, though not of earlier date, has been more systematic, and was preserved with less interruption during the period affected by the circumstances above named than in England. Several distinct causes have conduced to this: the difference resulting from a climate less favourable to speculative excess in the growth of grain, and less influenced therefore by a system of legislation based on the market value of that produce; a more diffused education, giving clearer views of the practical value of leases, coupled with their available use, and recognition by bankers, as security for advances of capital to the leaseholder; the power to heirs of entail (under the Montgomery Act) to charge the estates for their own improvement—all these causes combined have produced a very characteristic difference in the land system of our northern neighbours, and a more commercial and business-like independence in the general economy of landed and farm management.

In Ireland the land question has a history of its own—a history that presents the most deplorable and, in some respects, the strangest issues that ever in any country have darkened the problem of the vicarial occupation of land.

It is too much forgotten that this relation of man with man is one for which nature has made no provision. No appeal lies to any innate sense, as in that of the parental, filial, or fraternal instinct, in aid of the tie, conjunctive or disjunctive, as the case may prove, that unites—or confronts—the interests of men under the factitious relation of proprietor and occupier. It is one that bows to no sentiment, nor tolerates even the unsound ring of a faulty metaphor. "We pull in the same

boat," said an English landlord to his tenant, when rents hung quivering upon the Corn Law Debates. "Yes, but in opposite directions," was the cynical retort. There was a vein of truth in the reply that is ever at hand to show itself on the surface when occasion calls. "The land laws of Ireland," it is often remarked, "are the same as those of England;" where large estates have made large farms, and large farms have in their turn produced a gigantic manufacture of machines and labour-saving implements, unknown to former times or other countries, itself reacting upon a system whose broad-scale cultivation is finally quoted, perhaps too exclusively, as the perfection of agriculture.

It is true that the laws are the same. But there is an old adage of authority, that "indifferent laws well administered are better than good laws badly administered." If England has exemplified the first category, in the sister island has been seen the worst of both.

By the presence of the wealthy English proprietor amongst his tenants; by the example—sometimes the warning—of his own experimental farm; by the introduction of the last "new and improved" machine, and the best blood; by the intelligent and kindly intercourse (not confined to the "stumpy courtesies of males") pervading the estate as from a central focus; by his heavy bills for farm repairs, constantly occasioning some visitation of his own, be the mason and carpenter never so alert, or the steward never so ubiquitous: by these mere commonplaces of an English landlord's life, what laws, however awkward and rusty, could fail to move lightly on well-oiled hinges? What does the tenant, in such a case, think or care about the "land laws?" What are they to him more than the night-wind that whistles through the keyhole of his well-warmed dwelling erected—like everything else upon the farm, except the very corn-ricks—by his landlord, and at a cost whose yearly *interest*, exclusive of repairs, is a running item, "written off" by the hand of Time, in the silent partnership that meets his own investment in the soil.

Now take away all this; substitute, one cannot say its "opposite," but the picture of its mere *absence*, in every particular; open the Pandora's box, and let out all the ills that follow the "curse of absenteeism"—the rack-rent, the often unfurnished farm, with its lean kine, and fossil implements, the dismal dirty cabin—and let the same wind blow upon the scene,

upon "this picture and on that." Would it be possible, out of the same bare elements, to create a greater contrast? under the "same laws" to produce more opposite effects?

But a contrast no less striking lies in this, that whilst in England the aggregation of land under the influence of entails has tended to create large farms; on the other hand, it has been under these very laws that the worst evils that have ever been associated with small holdings of land, as seen in the cottier system of Ireland, have grown up, and led to results that reached their climax in the Encumbered Estates Court, and the Potato Famine: whilst no such results have been ever exemplified or heard of in those countries, and they are many, whose laws are favourable instead of adverse to the distribution of the soil. Yet that which looks so like a paradox, is as due to the simple laws of cause and effect as anything can be which the history of land teaches.

The solution lies in the well-known fact that men treat what is their own in one way, and what is another man's in another way; that what is a man's own teaches him *care* and *economy*, while in dealing with that which is another's he learns indifference and waste.

Let Ireland, on the one hand, and Belgium (or Prussia, since the introduction of Stein's system), on the other, be taken as illustrations. In the former were to be seen immense estates held, and let at second-hand, by "middle men;" and let and sublet again, like a sporadic growth generating its kind, till it reached, if it *did* reach, its unit in the potato-patch. In the latter, the law which facilitates and cheapens purchase, to the small equally with the large buyer, beginning *at the small end*, so to speak, sets at work the self-interest, and care, and prudence of every individual who can buy, no matter what the quantity. The result shows itself in the conduct and character of a whole people. In each case, the land reflects like a mirror the motives set to work upon it. Take away the individual sense of property, and the opposite result is seen. Arthur Young's often-quoted words underlie the whole question. Those who attribute the results experienced in Ireland to national character, find in Ireland examples which contradict the judgment, even were it not nullified by the impossibility of distinguishing between cause and effect. In his speech on the second reading of the Irish Church Bill, the Bishop Lichfield (late Bishop of New Zealand) said—

“ In New Zealand, Englishmen, Scotchmen, and Irishmen live together upon the best terms. The qualities of each particular class become blended with each other to the improvement of all. No dissension as to tenant right can arise, *because every tenant has the right of purchasing the land he holds at a fixed price.* Under these circumstances the tenants, instead of being lazy and drunken, strain every nerve in order to save the money which will enable them to become the proprietors of the land they occupy. In this way it happens that the most irregular people of the Irish race become steady and industrious, acquiring property, and losing all their wandering habits, until it becomes almost impossible to distinguish between the comparative value of the character of Irish and Scotch elements.

“ Of their loyalty to the Crown I can speak from my own observation, for the only regiment that is employed in keeping order in New Zealand is *Her Majesty's Royal Irish.*”

But if this be true in New Zealand, it is not less exemplified at home, where the impartial pen of the *Times'* correspondent in Ireland has exhibited instances of estates as well managed by *resident proprietors*, and in some cases by intelligent agents, and a tenantry as satisfied, prosperous, and attached as in any part of England. The description given of the Bessborough tenantry might be taken as an exemplar of small farming. Where the same ameliorating causes are present, the same results are bound to follow; but these are exceptions, and will continue to be so wherever the English land laws prevail unmodified by the hand of the resident proprietor, and the resources presented in a wealthy manufacturing country where the displaced agricultural population can find employment in the towns. It is not under such modifying conditions that our land laws work out their natural consequences. What we have to consider when examining *a system* are its absolute elements and structure, not the dress it may be made to wear under special circumstances, or in the lap of customs invented and adapted to relieve its pressure. Ireland has furnished the test and criterion of the naked action of laws, writing of which Lord St. Leonards, the most professional, not to say technical, apologist they have ever had, acknowledges that “no young state ought ever to be entangled in the complication of our law of real property.” Such an acknowledgment from such a quarter leaves little unsaid; it would be difficult to frame a heavier indictment. Our colonies have, one and all, wisely shrunk from their imposition; the United States rejected and repealed them as soon as they were free to choose, and there is now not a country of the civilised world in which they survive. Ireland alone—not a colony, not a dependency, but

an integral part of the United Kingdom—is involved in the unwelcome partnership of laws which we inflict upon ourselves in the teeth of our own Commissioners' Reports and the testimony of our greatest lawyers and economists.

"Committees and commissions," writes Mr. Booth, in answer to the Real Property Commissioners,* "composed of men of capacity and experience of all parties, have, over and over and over again, patiently and ably investigated the causes of the distresses, difficulties, and misfortunes peculiar to Ireland, and there has been an almost general concurrence of opinion in their numerous reports, as also in the writings of other able men, including those in the periodical press of the whole kingdom, that the system of Transfer of Land requires simplification and amendment. The whole subject has, in short, been so exhausted in these publications, that it is scarcely possible to suggest an idea upon it which has not been clearly expressed before.

"Simple absolute ownership of land is the condition most favourable to its improvement; but, nearly up to the present time, such ownership has been very limited in Ireland. The land has been almost wholly held by tenants for life, often liable to the payment of heavy annual charges for incumbrances, or by men holding under such circumstances of tenure as deprived them of that stimulus to the expenditure of labour and capital which accompanies a full ownership of land. The personal interest of the absolute owner is, that his land shall become as valuable in every respect as he can make it; that of the mere life annuitant, or of the man having any other limited interest in it, is merely that his own rent shall be as high as can be obtained. *Millions of the public money have been lavishly squandered in the vain endeavour to put down evils which would have had no existence under a better state of the laws of property*; disturbances and insurrections, with all their attendant misfortunes and crimes, have, until very recently, for a century past existed in Ireland as a chronic disease, clearly traceable to the anomalous state of ownership and tenure of land.

"So many difficulties beset the man who has any dealings with land, that some persons erroneously believe they were contrived expressly to deter men from becoming the owners of real property. There could not have arisen such universal dissatisfaction with the existing laws, or such general approbation of that most salutary measure, the Encumbered Estates Act, unless the evils of the ordinary system had become almost intolerable.

"The people of Ireland of the inferior classes are very shrewd and intelligent. I have often heard men of that class make use of a common saying, 'A pennyworth of land, a pound's worth of law.' Since the passing of the Encumbered Estates Act, another expression has become common: 'It was the best thing ever done for Ireland.'

"There can be no doubt that Ireland, by means of its existing registry of deeds, its complete Ordnance survey, and uniform public valuation, and the machinery formed under the Encumbered Estates Act, possesses obvious facilities for the introduction of some permanent system to facilitate the sale and transfer of land."

The Encumbered Estates Act did all that a temporary

* "Report of the Commissioners for Registration of Title," p. 411. Communication from Mr. W. Booth, C.B. (Ordnance Office), Dublin.

remedy could do for a permanent disease ; but it "scotched the snake, not killed it." It probed the wound and showed where the mischief lay. It even created wealth in Ireland, and a taste of prosperity which has flushed the cry for a constitutional cure, for land laws that shall not drift the country again into the renewed need of such a measure.

The treatment of the Irish land disease will hardly be found out by ignoring its cause, lest the discovery should present us with the home motto, "Physician, cure thyself." Nor will the cure be hastened by indulging the selfish nationality that expects from another people the race-characteristics that do not belong to them. It may be startling to the English experience that prefers tenancy to ownership, or to the Scotch intelligence that has brought leasehold to a science, to find their panacea imperfectly appreciated by a people whose native attachment is to the land more than to forms of tenure, or even length of lease.

But statesmanship embraces all nationalities ; and if the utmost freedom of land purchase—which all authorities on the wealth of nations have pronounced to be one of the first of national benefits—contain, as proved in other countries, the permanent cure for agrarian difficulty, the day may be nearer than it is thought ; and near it is, if there be truth in the maxim that a complete diagnosis is half a cure—when the long-running issue of Ireland's greatest trouble shall be dried up. But the malady of centuries' growth is not cured in a year.

Hitherto the points of view from which the history of our land laws has been considered have comprehended only the interests of the Owner and the Occupier, whose individual and relative positions it has been attempted to trace.

The two classes that remain—the Labourer, and that large portion of the public who have no direct participation in the ownership or tenancy of land—seem to fall under a different field of inquiry. It is true, we commonly hear our agricultural system spoken of as comprehending the Landlord, the Tenant, and the Labourer, and so in a certain sense it does ; but no one who considers the position of the labourer in English agriculture will assert that he has any fixed personal tie within the structure—that he stands to it in any relation but that of an auxiliary, more or less in demand at different seasons of the year, subject to the precarious vicissitudes of that demand, no

longer indeed, as in former times, *adscriptus glebæ*—free to go and come as he pleases, but without part or parcel in the land he helps to cultivate, or any certain abode upon it, near it, or in connection with it, for himself or for his family.

This is no overdrawn picture: neither are the facts stated due to any surviving hardship of feudal habits which modern legislation has forgotten to correct. On the contrary, the labourer was, till recent times, the recognised inmate of the farmer's house; and still farther back than this, the bond that tied him to the soil, the badge of his servitude, was yet the link which connected his life and social state with that of his employer, who was usually the Owner of the land he tilled. Time has changed all this; and, for most other classes, for the better. But the same English reign that awarded to the labourer his freedom, marks the origin of our Poor Law system—an ominous association; and his present disconnection from all that is known as the "progress of society," constitutes not only the reproach of our agricultural advancement, but an acknowledged blot upon our social system.

It would be a libel upon any class of the generation to which we belong to charge upon it the isolated phenomenon which the agricultural labourer presents in the midst of the growing wealth, and the growing poverty, that are separating the modern life of this country into the problem of two gigantic masses, widening from each other, and both rapidly augmenting: "Constantly increasing rates, constantly increasing pauperism, millions of money spent, yet without satisfaction, and—ininitely worse—millions of human beings whose very name implies a degradation even in their own eyes as recipients of parochial relief,"* on the one side; and on the other, on a scale never before exemplified, "the most conclusive evidence that the production of wealth in this country is so vast and so rapidly augmenting, that it is idle to say poverty exists because enough wealth is not produced."†

An anomaly within this wider anomaly is presented in the farm labourer; for while in every other feature of progress—in machinery, in skill, in applied science, and in scale of profit—the business to which his labour belongs has advanced at a ratio never before witnessed, his position has been, except in a few favoured districts, nearly stationary. Mr. Caird's tour, in

* Speech of the President of the Poor Law Board, December 20, 1868.

† Fawcett, "Economic Position of the British Labourer," p. 6.

1850, through the counties of England, established that "while in the purely agricultural counties the rent of land and the rent of a labourer's cottage had risen, since the tour of Arthur Young, 100 per cent., the price of butter 100 per cent., and of meat 70 per cent., the rise in the labourer's wages was but 14 per cent."

Over the south and west of England, the description given by Mr. Fawcett of those whose daily toil is on the land, is still applicable. "Theirs is a life of incessant toil for wages too scanty to give them a sufficient supply even of the first necessities of life. No hope cheers their monotonous career: a life of constant labour brings them no other prospect than that, when their strength is exhausted, they must crave as suppliant mendicants a pittance from parish relief. Many classes of labourers have still to work as long, and for as little remuneration as they received in past times; and one out of every twenty inhabitants of England is sunk so deep in pauperism, that he has to be supported by parochial relief."*

Comparisons are sometimes drawn between the agricultural labourer in England and in other countries; but little reliance can be placed upon parallels made by travellers from hasty generalisation, mostly in accordance with foregone conclusions, and which contradict each other: the true and honest comparison in all countries is that which arises in measuring the relative advance of class with class at home. And here the state of the agricultural labourer presents itself as that of one thrown out of participation by the very system which his toil helps to build.

The manual labour of an arable farm forms at least a third of the entire cost of production; nothing is more common than to hear the complaint of the great costliness of this element in the year's accounts. In his useful little essay Mr. Bailey Denton remarks, "The only way to justify an increase of the labourer's wages will be by rendering the value of the labour greater than it now is."† Yet its energy and power are wasted, almost without a thought, even in the mere element of *distance*—which has been aptly compared to the day's march of a soldier—between the toiler and his work; coupled with a neglect of his comfort, of his spirit, and of his

* Fawcett, "Economic Position of the British Labourer," p. 6.

† "The Agricultural Labourer," by J. Bailey Denton, Esq.

intelligence, that diminishes its value as much as the waste of physical power.

But effects do not arise without causes, and the condition of the labourer will derive no permanent change from the mere suggestions of philanthropy. It must be studied in conjunction with the system of which it is a part. The law of Parish Settlement swept away cottages, and the Union Chargeability Act has done nothing to restore them. Whose interest is it, under our universal system of tenancy, to provide the labourer with a home that may connect him with his work? The farming tenant cannot do so; the land is not his to build on, nor the permanent interest his, to care to sprinkle the land with dwellings that might furnish hands for acres to those who come after, or even, it may be, for next year; for who can tell what change to himself a year may bring forth? And the landlord cannot do it; for what, under our system, is his interest? He lets his land for the return that another man's capital and skill can make of it, by any means not forbidden in the agreement or lease. It is the tenant's natural endeavour—it is his business—to make the most he can, and within a certain time; and if he could cultivate his farm entirely by machinery, without employing a single labourer upon it, it would be worth his while to purchase a saving so economical to himself, placed as he is in the position of an occupier to whose point of view each cottage is a standing threat upon the rates, subject to *the whole* of which he rents his farm. Under our land-tenure system—that of the life owner under settlement, and the yearly tenant farming the land for the largest profit that can be made from it, by the most compendious machinery, with the least outlay of manual labour—the interest of the labourer in the soil, his relation to it, or to either of the other parties, is one of strange definition. He is *not* his landlord's workman, and he is *not* his employer's tenant; the man who employs cannot house, and the man who could house does not employ him. Dependence has its advantages, and independence its charms; but his lot is so cast as to derive the minimum of benefit from either.

The improvement of his present condition by education belongs to a great and solemn question of the day: but education, which quickens the sense of hardship, also happily tends to emancipate the subject of it; and an *educated* farm-labourer becomes, in too many cases, a farm-labourer no longer. When

we are considering how to improve the nest, it hardly helps the inquiry to show how the birds may learn to fly out of it. The question as to his cottage accommodation becomes, under our system, one of those detached problems that fall into the waste-basket of pure philanthropy. Whence he comes in the morning to his work, or whither he goes in the evening when he has done it, provided he has done it, his employer, who has no cottage to give him nor means of building one, may vainly inquire; and if it presses lightly upon him, still more remotely does it touch the landlord, who is ill prepared to spend the portions of his younger children in making questionable additions to the inheritance of his eldest, by erecting a class of buildings that have the worst reputation of all as an investment; thereupon the Government is invoked to lend the public money—through “land improvement companies” empowered by Act of Parliament to furnish gentlemen’s estates with Cottages, and to help “Tenant for life” out of the dilemma between younger children and philanthropy; and public capital is invited to join an indirect scheme for keeping public capital out of the land-market.

Dr. Hunter, the medical officer of the Privy Council, inquires, “whether all land *which requires labour* ought not to be held liable to the obligation of containing a certain proportion of labourers’ dwellings;”* and so we go on putting legislative props under this decaying branch, and under that; the last thought that occurs being that of examining what it is that *ails the circulation*—what is the matter at the root—whether the defect be not in the system itself, which has been instrumental in bringing the condition of the farm labourer to be preached at as a standing subject for charity, philanthropy, state grants, and emigration, as if it was an isolated effect without a cause? The question has been brought so frequently of late before the public, the facts have been so fully and forcibly stated, of the housing, and condition, and prospects, of the agricultural labourer, that it is useless to repeat the description. The point we have here to consider is its connection with the landed system of which it forms a part, a part thrown out, indeed, like the slag from the working of the furnace, and yet a part.

The striking defect of the system is that of his entire separation from all interest and share in the results of his own

* Seventh Report.

labour. "The worst-paid workmen in this country," says Mr. Fawcett, "are so thoroughly reckless that they seldom show any foresight for the future; and even higher wages effect no permanent improvement in the condition of the poor. They do not save their increased earnings, but spend their money either in drink or luxurious living. That this should be the case can be a matter of no surprise whatever. There is no effect of ignorance more certain than an almost entire absence of foresight; and the life of a hired labourer can exert no influence whatever towards cultivating any of the habits of prudence. . . . How much more powerfully would prudence be stimulated, if a definite prospect were held out, that a labourer might, in the course of time, by means of his saving, secure a small landed property! The value of such an acquisition is not to be estimated by the amount of wealth with which it enriches him. It makes him, in fact, a different man; it raises him from the position of a mere labourer, and calls forth all those active qualities of mind which are sure to be exerted when a man has the consciousness that he is working on his own account."

The last point, and the most important of all, is the effect of our land laws on the whole of that class who have no participation in the soil, who look upon its ownership from a distance as a thing that has long grown out of the reach of the great bulk of the community by its costliness of purchase, and the still more discouraging prospect of its continuing costliness *to hold*; who see it gathering year by year into larger territorial acreages, beyond the reach, as beyond the prudence of moderate or small investments, and are jauntily assured that henceforward in this country land is to be regarded as the "pleasure-ground" of the rich, and that whatever political economy may say about the "distribution of wealth," it is neither profitable nor desirable that land, at least, should be owned in any but the largest quantities—estates that will support their lawyer and their land-agent without sensible diminution of the rental. Of the actual inducement offered by our present system of transfer to buy small quantities of land, the two following Tables will furnish some idea.* The first is that of purchases over, and the second of purchases at or under £1,000, during a period of four years.

* "List of Purchaser's Expenses, furnished by Mr. George Sweet, Barrister (Conveyancer) to the Commission for Registration of Title," p. 38r.

TABLE I.

Purchase Money.	Purchaser's Expenses, irrespective of Stamp Duty, &c.		
£	£	s.	d.
1,800	24	0	10
4,667	54	5	4
2,300	52	0	4
1,260	17	2	8
2,662	39	0	0
1,340	40	9	2
1,695	21	10	0
1,835	32	0	10
1,248	46	12	2
1,895	54	8	0
2,274	72	4	6
<hr/> £22,976	<hr/> £453	13	10

TABLE II.

Purchase Money.	Purchaser's Expenses, irrespective of Stamp Duty, &c.		
£	£	s.	d.
1,000	46	12	0
956	23	19	0
746	48	12	6
600	31	10	0
500	15	6	8
230	39	13	3
225	15	7	0
100	23	14	3
<hr/> £4,357	<hr/> £244	14	8

These Tables show an average of $2\frac{1}{2}$ per cent., or five times the *ad valorem* stamp duty, which alone is a heavy tax. But an average gives no evidence of the burthen in individual cases. Thus in Table 2, taken alone, the average expense of the purchaser is nearly 6, and in the last case 23 per cent.! The vendor's expenses would be in every case much higher.

It is not to be wondered at that under such discouragement attending the mere initiatory step, and irrespective of all the after circumstances attending the ownership of land it should gradually cease to enter into the thoughts of the great bulk of small investors, and come to be looked upon as the expensive plaything only of the largest fortunes. It is beyond the power of calculation to estimate the effect, upon a saving and industrious community, of this denial of the most natural and preferred of all forms of investment—the purchase of land. We see the alternative, in speculations of the wildest and most wasteful character entered upon by the public, where thousands of small capitals which, employed upon the land under the influence of the *auri sacra fames* that vents itself upon useless or deceptive schemes, would set to work tens of thousands of agricultural labourers. It would be

difficult to paint a folly more cruel and suicidal than that which, by home-made obstruction, intercepts the inward flow of capital, and drives it from our shores in pursuit of objects far more illusory and worthless than the conversion of the most impracticable moor that ever was turned into arable land.

Even in the wildest home investment there lies that which belongs to the birthright of the labourer. To him first, and to the home consumer secondly, there arises benefit upon schemes of land restoration and improvement that might have remained for centuries neglected, if the returns of the capitalist had been the only point of calculation. Every cause that interferes with the transfer—with the free circulation—of land is laden with this heavy responsibility, one that operates in the same or a like degree upon no other form that wealth can take.

The mischief of artificial laws lies not only in the evil they set up, but in the *good they prevent*, by interfering with those primary natural laws whose salutary action they intercept. It ought to be superfluous to say that what is best for every country is that wealth, whatever form it takes, should exist in both large and small, and every intermediate proportion, without hindrance from factitious rules and theories. It is not true that a preponderance of small or of large estates is an evil; but it is true that exceptional laws directed to produce either extreme are an evil, not only by their direct operation, but by their collateral and resulting disturbance. There is not a class of society unaffected by the laws that govern the land. It is the original source of all wealth, and of the whole machinery of human action. An error in the laws that govern it involves consequences that interpenetrate the social action of the whole community: to indulge theories *in favour of* small estates or large estates in land is mere folly; when the trodden experience of life ought sufficiently to demonstrate that the mere tendency of a "law" to produce either extreme is its condemnation.

The comparison of large and small holdings in land may be useful in so far as it brings into practical view their relative advantages, and limits, both in mode of culture and speciality of produce, their adaptation to peculiarities of soil and climate, and to the varying genius of race (for the difference of national aptitude and bent are evident and unquestionable); but, as a matter of controversy, it is unpractical and inconclusive, since

no result of argument can bring it within the proper sphere of legislation, or under any human tribunal. The laws have no such office, and custom will take care of itself. All that legislation can do is to remove every obstruction to the wholesome operation of that spontaneous action which regulates its distribution by laws as inflexible as those that govern the tides. The Anglo-Danish monarch might have reversed the throne set for him on the sea-shore, and with equal wisdom have apostrophised the littleness of human power when it attempts to govern the laws that govern *the land*.

The real property laws of this country, from the period immediately succeeding the Conquest down to the present time, presents a history consistent with itself in one particular, that of a perpetual struggle of rival interests. The parties to the conflict have differed in successive periods; the feudal sovereign, the baron, the churchman, the lawyer, and the land-owner have each entered into the strife in turn, each as the pressure of adverse power or of selfish interest impelled them. The result of all these struggles was the system bequeathed two centuries ago, and under which, with but slight modification, the business of the country is still carried on. But in those struggles there are two voices that were never heard—two interests little thought of—those of the Political Economist and the Agriculturist. Can it be wondered at, if the state of those laws be found productive of results injurious to the best practices of the one, and violating the first principles of the other? There is in the history of this country no instance to be found in which the ripened and intelligent desire of the community, clearly and repeatedly expressed through the most public, the most able, the most learned channels, upon a subject which has received prolonged and exhaustive investigation by a succession of Royal Commissions—has waited so long and so patiently upon the hand of legislation as that which has asked for the reform of our law of Real Property, especially as affecting the acquisition and transfer of land. Whether the subject be looked at from the point of view of the Jurist as a question of law-reform, in the restoration of simple and inexpensive, instead of complicated and costly procedure, or from that of the Agriculturist in respect of the influence that this branch of the law exercises over our most important home-industry, or from that of the Political Economist pleading for

the rights of the community in the distribution of public wealth—the cry is still the same, “Free the land;” release it from the shackles in which time, and custom, and interests—long passed away—have entangled it, obstructing its adaptation to the uses of modern life, and presenting it as an anachronism upon the face of our institutions.

It is almost idle to expect—from those whose professional education and whose daily practice have been engaged upon the traditional forms and technical framework of a system which comes to their hands sanctioned by the usages and stamped by the learning of centuries—from them to expect the initiative of that emancipation of land which the necessities of modern life, agricultural and commercial, demand, from restrictions imposed during historical periods, when those interests had no representative in the State.

The land has parted with protection in the disposal of its produce, and confronts the rivalry of the world. In that rivalry it encounters the laws which govern the productive powers of other States, laws resting upon the diffusion, not the concentration of land, or the contraction of its resources.

The testimony of a host of witnesses who have communicated their views, personally or by writing, to the Royal Commissions that have sat from time to time during the last *forty years*, and of writers, professional and otherwise, whose very pamphlets, if collected, would form an encyclopædia of real-property law reform, might be cited to show that the rendering *effectual* the Registry of title, based upon an authorised map on the approved cadastral scale, and free of stamp-duty for the first five years—restriction of Entail to lives in being at the date of the Settlement, or death of the Testator—the assimilation of the law of landed Intestacy to that applying to personalty, the fusion of Legal and Equitable estates, and the assimilation of the law of agricultural to that of trade Fixtures, would do more to advance the interests of those concerned in the land, and those dependent on them, than all the cumbrous mechanism which the law now lavishes upon forms that operate by withdrawing from each present owner in turn that fertilising power and action which experience has shown to be the best protection of the future

IV.

THE TENURE OF LAND IN INDIA.

TENURES PREVIOUS TO BRITISH RULE.

It is sometimes said that India is composed of so many different countries that we can never speak of it as a whole. I do not think that is the case in the full sense in which the statement is made. Probably, six or eight hundred years ago, in the European countries which had been conquered and ruled first by the Romans and then by the Germanic peoples, there was a greater similarity of institutions and manners than in modern days. Similarly it has happened that, however different may have been the aborigines of different provinces of India, they have been covered by successive waves, first of Hindoo populations, and then of Mahommedan conquerors, and so have been assimilated in perhaps a greater degree than ever were European countries.

We have no historical record of the advances of the Hindoo people, but much still remains, in the ethnography and institutions of the country, to show that they may be divided into at least two classes, the earlier Brahminical Hindoos, and the later tribes of more democratic character and more nearly allied to the Germans, who preceded the Mahommedans in the rule of the country. After all that has passed, the institutions of these Hindoo races still survive in almost every Indian village.

The Mahommedan conquest and dominion was more complete and more centralised than that of any power which has ruled in Europe since the Romans. Twice have Mahommedan empires ruled over the whole of India, with little exception. In the interval between these two universal empires the country was not lost to the Mahommedans, but was for the most part divided among several Mahommedan dynasties, very similar to one another in character. The last great Mahommedan empire, which welded all India into one country, was in its zenith no longer ago than the beginning of the last century. Its rule was highly centralised, and from Peshawur to Cape Comorin on the one side, and to Chittagong on the other, much of its official system, and almost all its official language, survive to the present day.

My view, then, is that, although the present circumstances of the various provinces of India infinitely vary, their institutions may be traced to very similar sources. We may say that very varied forms have been built up on various plans, but

that the materials are in the main the same. I would first try to explain the conditions of landed tenures which we found in existence, and then would exhibit the different phases which they have assumed in different provinces under British administration.

The long-disputed question, whether private property in land existed in India before the British rule, is one which can never be satisfactorily settled, because it is, like many disputed matters, principally a question of the meaning to be applied to words. Those who deny the existence of this property mean property in one sense; those who affirm its existence mean property in another sense. We are too apt to forget that property in land, as a transferable mercantile commodity absolutely owned and passing from hand to hand like any chattel, is not an ancient institution, but a modern development, reached only in a few very advanced countries. In the greater part of the world the right of cultivating particular portions of the earth is rather a privilege than a property; a privilege first of a whole people, then of a particular tribe or a particular village community, and, finally, of particular individuals of the community. In this last stage the land is partitioned off to these individuals as a matter of mutual convenience, but not in unconditional property; it long remains subject to certain conditions and to reversionary interests of the community, which prevent its uncontrolled alienation, and attach to it certain common rights and common burdens.

A still more important distinction is this, that in countries which have been conquered by immigrant races from predecessors who had already cultivated the soil (that is, in almost all the countries of the old world), the dominant arms-bearers generally cannot cultivate the whole of the land themselves, and do not attempt to cultivate through others on the modern capitalist, farmer, and labourer system; they willingly leave in actual possession of the greater part of the soil the people who cultivated it and who are attached to it by many bonds. Hence we have a very widely-prevailing distinction between the privilege of levying the customary rent and the privilege of occupying the soil. In India the rent was generally levied by the State or the immediate assignees and representatives of the State; but, nevertheless, there was frequently to be found in the village communities a privilege or property in the occupation and management of the soil, which constituted as strong

a form of property as can anywhere be found short of our modern form of landed property. I do not here refer to the disputed question of the right of occupancy as between landlord and ryot, which is the latest phase of Indian land questions, but to the rights of some of those whom we now put in the proprietary class. I cannot imagine a more distinct privilege-property than that of some of the strong Jat villages in the Punjab territories, many of which were rather tributary republics than subjects or tenants. In the sense, then, of the right of holding the land subject to the payment of customary rents, I think that private property in land has existed in many parts of India from time immemorial.

The feudal system I believe to be no invention of the middle ages, but the almost necessary result of the hereditary character of Indo-Germanic institutions, when the tribes take the position of dominant conquerors. They form, in fact, a hereditary army, with that gradation of fealty from the commander-in-chief to the private soldier, which is essential to military operations. Accordingly we find that among all the tribes of Indo-Germanic blood which have conquered and ruled Indian provinces, the tendency is to establish a feudal system extremely similar to that which prevailed in Europe. In Rajpootana the system is still in full force. The Mahrattas and Sikhs had both established a similar system. In my early days it existed in great perfection in some parts of the Cis-Sutlej Sikh States. But the Mahommedan system is quite non-hereditary—I may say, anti-hereditary. The genius of their centralised government was entirely opposed to the feudal system; and wherever they have completely ruled, they have swept it away. Hence it has only survived in those Rajpoot States which were indulgently permitted to retain a self-governed position as tributaries, and among some border tribes never thoroughly subdued. It had been but partially redeveloped in the Hindoo States which had a brief independent existence between the fall of the Mahommedan and the rise of British power. Rajpootana, then, not being British territory, and the surviving Mahratta and Sikh Jaghardeers being in most instances rather rulers than subjects, it may be said that, notwithstanding the feudal genius of the people, the feudal system does not much prevail in our territories. There are a good many tributary chiefs and sub-holders under them in the wilder parts of the country, and several gradations of tenure may still be found in

some provinces; but no great province is organised on a regular feudal system.

There are, however, numerous grants of the revenue due from particular tracts or plots of land, and to these revenue-free holdings only do the Mahommedans apply the term "milk," or property. They are very frequently granted by the ruler for the time being in terms importing perpetuity; but being almost always assigned for some particular purpose—the support of a particular religious institution—for a particular service of some kind—or for the livelihood of a particular family—they may be considered as being property entailed and inalienable. In practice they were always resumable at the pleasure of the ruler of the day; and under native rule there was a continual process of resuming old grants and granting new ones. In the confusion attending the downfall of dynasties, many grants of this kind were made by subordinates of insufficient authority; many were set up by fraud and usurpation; and the known tenderness of British rule for anything bearing the appearance of property, as well as our foreign ignorance, greatly encouraged such claims and usurpations in the provinces which first came into our hands. The sifting of these grants, and distinguishing the good from the bad, and those made for purposes still subsisting from those for services no longer rendered, is a process which always requires early attention. We have treated them under very liberal rules. Renouncing the arbitrary *de facto* powers of native princes, we have recognised, as valid and binding, all grants made by any authority which was at the time competent to make them, and have given the grantees a complete and certain tenure, instead of the precarious tenure at the pleasure of the prince for the time being. All incomplete tenures having some show of long possession or other equitable claim, we have treated very tenderly, either maintaining them, or giving them terms of very easy compromise. We have not only professed this indulgent treatment, but we have embodied these lenient rules in public laws, and have opened the courts of justice to all who wish to appeal to them from the decisions of the executive officers. Altogether, so far, nothing could be more equitable and indulgent than the treatment of the whole subject. But it unfortunately happened that in some of our older provinces, the investigations necessary to apply the rules were long delayed—the most fraudulent and un-

founded tenures acquired a certain prescription of possession—and when the inquiry was at last made, there was a good deal of bitterness and outcry, which led to still more indulgent compromises. I believe that these investigations have now been completed in every province, and that the whole matter is finally set at rest.

The permanent revenue-free holdings thus created, though large in the aggregate, are in most districts very inferior in extent to the lands which remain subject to the public revenue, and may therefore be considered as exceptional.

In the course of the general investigation of titles, which forms part of what we call a settlement, it is determined whether these grant-holders have a complete title to the land, or are only entitled to the public rent or revenue. In very many cases—in almost all the larger holdings—they are but revenue receivers, while the land is actually held by others whose privileges are similar to those held under Government. In other cases, especially in the smaller holdings, the grantee either held the land before it was made revenue-free, or has in some manner obtained possession of it. In that case he is the complete owner. A large proportion of the grants are, as I have said, held for specific trusts; but many (too many, in my opinion) have evaded such obligations. These latter are now freely alienable, and they constitute the only complete landed property in the English sense which exists in India.

Having disposed of the revenue-free tenures once for all, I return to the normal condition of land in India; that is, when it pays rent or revenue to the State, but is occupied and managed by individuals. The whole question whether we consider the State to have been the superior proprietor, may be narrowed to the question whether we are to call the State receipts revenue or rent; and that again may be got over by showing what the dues of the State really are, and leaving it to every man to give them what name he chooses.

The original form of the due received by the State from the land was certainly a share of the produce. When the crop is reaped the State is entitled to a proportion of the grain, regulated according to the custom of the locality. That is a very old institution. In very ancient times the proportions were less than in modern times—one-tenth or one-eighth—and I am unable to say whether the subsequent enhancement of the State share is chiefly owing to greater demand for land to feed

•

a larger population, and consequent natural increase of rent, or whether it is rather owing to enhancement of taxation on the part of successive conquerors. But this is certain, that in modern times, and indeed for centuries past, the share taken has been so large as to be no mere tax, but substantially to absorb the rent. It has amounted, in fact, to a customary rent raised to the highest point to which it can be raised without causing the people to emigrate or rebel, and so defeating its own end. It seems to me that the distinction between a tax and a rent is merely a matter of amount; and that if a land tax is so high as to absorb the rent, it becomes in fact rent. In this view the State in India may be considered to have been the superior proprietor, in the same sense as any other proprietor who is entitled to receive customary rents, but does not cultivate or manage the land.

In no part of India, and under no form of government, did the State undertake these latter functions, or any others analogous to those of an English landlord. Except in the assignment of waste land to be cultivated on the customary tenure, there never was any system of interference with the immediate possession of the soil; no letting it by competition to the highest bidder, or anything of that kind. Those in possession of the village area were left in possession, and were allowed to manage their own affairs, subject only to the State right to receive its dues before the crops were carried from the ground.

The State, then, generally took very nearly if not quite a full rent; but, so far as my knowledge goes, there was seldom in India any systematic attempt on a large scale to go beyond this point, by chaining the people to the soil, and so exacting from them a customary rent larger than the real rent, as was the case in Europe when free trade in tenants was put a stop to by the system of serfage. The people have never been *adscripti glebæ*. I cannot say whether this is due to the large population and cheap labour, rendering anything like agricultural slavery unprofitable, or to equitable laws. The Hindoo system was one of small States, or when there have been large feudal organisations the territory was divided among different chiefs. I should judge that in a country abounding in great open plains, and where personal property is in small compass and light, it would have been scarcely possible to prevent the escape of a dissatisfied ryot to another jurisdiction. To the

present day we have sometimes complaints that a tenant has decamped in the night without paying his rent, and caried his house with him. Under the more centralised Mahommedan rule, the equitable Mahommedan laws did not permit any excessive tyranny of the great and rich over the poor. And so it has happened that under all governments, notwithstanding many hardships, the people have always in India enjoyed a great amount of individual freedom.

To this extent only it may be said that, in the times immediately preceding our rule, the Government rent was not unfrequently driven beyond a full rent—viz., that the settled ryots, the ancient inhabitants attached to the soil by the bonds of affection, habit, and property, were sometimes made to pay heavier rates than the mere temporary sojourners who were induced to come from elsewhere, and to take up, on exceptionally favourable terms, the lands left uncultivated for want of hands, at times when the country had been depopulated by wars and famines. The old inhabitants no doubt had the first choice of the best land, but still I believe that the result of the system was, that in hard times grasping rulers took from them both the fullest rent and anything more that they could be induced to pay rather than abandon their household gods, and the wells and other improvements which they had made.

It must not be supposed that the customary rent consisted of a uniform share of the produce levied equally on all crops and under all circumstances. On the contrary, the system was to a remarkable degree adapted to the circumstances, with much regard to principles which we should call political economy. Not only did the share taken vary in different parts of the country, but it also varied in respect of different kinds of crops, and different modes of cultivation. For instance, crops raised by artificial irrigation (not supplied from Government works), usually rendered a smaller proportion than those raised without irrigation, because in the former case a larger proportion was due to the labour and capital of the cultivator. The more valuable products, as sugar-cane, cotton, vegetables, &c., paid money rates according to the measurement of the land—the produce not being divided. The proportion of grain crops taken as rent or revenue may be said in modern times to have varied from one-fourth to one-half, one-fourth being a decidedly light assessment—one-half the heaviest. One-third and two-fifths were, I should say, the most common rates.

The grain only was divided, the cultivator usually retaining the straw. In ordinary agricultural villages he also had free grazing for his cattle on the village common, but in parts of the country where a large proportion of the land was given to grazing, a cess per head was levied on the cattle.

I am not aware that the rent was in any part of India paid in labour as in Europe; but, in addition to the proper rent, it was a common arrangement that the villagers furnished a regulated number of unpaid labourers for the service of the rajah. These labourers were men of the servile class, who received a small but exactly regulated proportion of the grain from the threshing-floor as their remuneration for this and other labour. When the labour was not exacted, its value was charged to the village, and formed a regular item in the accounts.

Most frequently the grain is not actually taken in kind, but, being weighed at the threshing-floor, the value of the Government share is charged at the market rate, and paid in cash.

Another mode is to estimate the produce of the crops on the ground before they are cut, and to charge the value of the proportion derived from the estimate; but in this case, allowance being made for over-estimate and the risk which the farmer runs, the proportion is calculated at a lower rate than when the grain is actually divided; for instance, if the division rate is one-third, the estimate rate will be one-fourth.

In each locality, then, there is a regular and exact scale of rates and charges established by long practice. I know no mode by which these rates can be altered in a constitutional manner: to make a radical alteration of this kind would be a revolutionary measure such as would only be effected by a very strong Government; perhaps by a conqueror making new arrangements for the first time. But in another way native governments generally contrive to squeeze their subjects a little more—viz., by the system of cesses, dues, and benevolences so well known in Europe. These are generally not taken in an altogether uncertain manner; there is much system in all these arrangements, and the various cesses are, for the most part, regularly entered in the revenue accounts and uniformly levied; the peculiarity, however, being that a rate once made for a temporary purpose very soon acquires, in the ruler's eyes, the sanction of custom, and is continued long after the necessity

for it has ceased. Thus, then, a native revenue account exhibits, besides the main rent, a succession of small charges—perquisites of various officials—perquisites of the rajah's wife—contributions to the marriage expenses of the rajah's son—and so on.

Previous to our rule the Government share of the crop had been in some parts of the country commuted into money rates, classified according to the most prominent descriptions of soil, and the nature of the crops grown. These money rates were equally subject to the extra cesses which I have mentioned.

Besides the Government dues made up of the aggregate of the assessment on each individual, there were frequently charges upon the whole village, such as the value of forced labour already mentioned—benevolences levied in the lump—fines and compensations for value of property plundered in the village limits—and such like; and these charges were partitioned among the individual members of the community, according to fractional shares or other forms of account, representing the interests of each.

The village is the well-known unit of all revenue arrangements, and it may be said of all landed tenures, in India. I use the word not to signify a village in our sense, but rather the area of land occupied by a community who generally reside together in a village. In the plain and thickly-populated country it may be said that all the land cultivated and uncultivated belongs to one village or another. The country is, in fact, partitioned off into villages; the village boundaries are known (if they are not the subject of feuds), and where one village ends another begins.

When I speak of a village "community," I use this latter word in an ordinary English sense, and not to signify the actual holding of property in common. Nothing can be a greater mistake than to attribute to the Indian village system any of the features of communism. It is true that in early times, before communities have settled down to fixed cultivation, the land is held to a great degree in common for grazing purposes, private property being in cattle, not in land; and even after it has been distributed for the purposes of cultivation, the custom of periodically adjusting inequalities by redistribution has not unfrequently subsisted to a much later time. But even in this latter case in India the land was not equally distributed, but was only re-parted according to the

recognised ancestral shares, casual inequalities and usurpations being redressed. As communities become more and more fixed and settled, this practice of redistribution dies out; and it may be said that in modern communities, in civilised parts of the country, it no longer exists. Encroachments may, of course, be resisted and redressed, but inequalities founded on possession of long standing are redressed by redistribution of the burdens not by redistribution of the land.

The bond which keeps together a village community is, then, rather municipal than a community of property. The cultivated land is held by individuals, and the common interest in common property is scarcely greater than that which exists among the commoners of an English manor. The waste land and grazing ground is held in common, certain common receipts are brought to a common fund, certain common charges are charged against the same fund, and distributed in a cess on individuals according to their holdings. There is a system of municipal management, and the community claims to exercise a certain limited control over its members, and to have a reversionary right to the land of members who cease to cultivate or fail to pay; but beyond this there is complete individual freedom.

The Indian village is best known in England by the descriptions which have been given by Elphinstone and others of the Deccan village; but, in my view, that is a somewhat decayed form of the true village of the stronger Hindoo tribes, and we must look for the strongest and most perfect village form in the more complete and more democratic communities, such as we find in the Punjab territory. It is these which I have cited as exhibiting the strongest form of Peasant property.

A Jat village community consists of a body of freemen of one caste, and who traditionally derive from a common ancestor—clansmen, in fact. A village may be divided into two or three parts, held by different castes or tribes, but I describe a simple village. Every man has his share, which is generally in the Punjab expressed in plough lands. A plough land is not a uniform quantity of land, but a share in the particular village. There may be sixty-four or a hundred and twenty-eight, or any other number of shares; one man has two ploughs, another a plough and a half, another half a plough, and each holds land representing his share.

The community is managed by a council of elders, who rule

it so long as they retain the confidence of the people, and who conduct all negotiations with the Government. In such a village, then, the body of the cultivators consider themselves to be proprietors. They are united, and very strong; they certainly exercise rights of property; and no one would dream of attempting to disturb them.

Most republics have been in some degree served by some inferior race, and in these Indian communities a smaller body of the servile tribes is almost invariably attached to the village; not slaves, but servile labourers. They may cultivate small portions of land, but they have no part in the village management, and would not, I think, be considered to have rights of property. Again, persons of better condition, but not members of the proprietary tribe, may have settled in the village and obtained land. The Government dues being such as to leave scarcely any margin between rent and revenue, we almost always find that all these people pay the same rates as the original proprietors. It may be that they are not admitted to a voice in the management, or to share in certain common receipts or perquisites levied by the headmen; but the distinction between an original proprietor and a cultivator long settled in the community, and in a great degree adopted into it, frequently became very shadowy in native times.*

Where we have strong communities, there is little difficulty in dealing with the community. But more frequently we have phases of land tenure which are much more doubtful. In some provinces, where the Indo-German tribes have not fully penetrated, the village constitutions perhaps never were so complete as those which I have described. My impression is that the ancient Brahminical institutions were by no means so democratic. Both in Lower Bengal and in Cashmere the villages have much less cohesion.

Again, in great parts of the country, war, desolation, and famine have, during the last century, obliterated many communities, and their place on the land has been taken by casual cultivators, hanging loosely together, and who can claim no ancient rights in the soil.

A still more common phase is the following:—The older proprietary tribes have been exhausted by prosperity, promotion,

* For facility of reference, I give in this Paper a short account of the indigenous village communities, &c.; but many years ago I published details on the subject. *Modern India*, chap. iii.—G. C.

military service, misfortune, and the many vicissitudes of Indian history ; they have ceased to hold their original position. But a small remnant partially occupies the place where once they were dominant ; and the land which they have ceased to till has been occupied by others. This has frequently happened to Rajpoot communities in the north-west provinces, and to other tribes in the south of India. The reduced representatives of the old tribe will generally be found to assert claims which the others do not always admit. The Government officers take their dues from the old inhabitants and new comers indifferently, and looking to revenue will not permit the former to keep others out of that which they cannot cultivate themselves. The old families may or may not furnish the headman through whom the Government collects its dues ; they may or may not receive some of the old perquisites for duties which they may or may not perform. But I think I may say that the relation between the old and the new occupants never, under native rule, takes the form of landlord and tenant. There is no such thing as an old family letting the lands to tenants at its pleasure, and making its profit of the rents. Wherever they have the management, it is as headmen accounting to the Government for their collections. And wherever they have certain dues, it is in the shape of perquisites, not of rent.

In all cases in which there was not a democratic body electing their own headmen, there was a headman whose functions were partly those of a Government officer, and partly those of the head of a quasi-municipality. This headman was called the Mokaddum in the more northern and eastern provinces ; Potal in western and central India and in the Maratta Deccan ; and Gauda in some other parts of the south. The office was semi-hereditary, as almost all Hindoo offices are—that is, the fittest member of the late official's family succeeds, with the sanction of the ruling power, some preference being given to seniority combined with approved fitness. The Potal accounted for the revenue collections, receiving the perquisites and percentages which were the accustomed dues of the office. Then there was an accountant, who held on a similar tenure, and sometimes combined with it the functions of village banker ; and there were other officers, each paid by the established perquisites. The whole constitute the form of community described by authors who have written of the Deccan and other provinces similarly situated.

What, if any, were the rights of the cultivators of comparatively recent settlement who do not come within the category of village proprietors, is a question which has been raised into great importance of recent years, since there has been discussion of the relative rights of landlords and tenants, but to which no definite answer can be given. It is and must remain a mere matter of opinion whether the facts establish a claim to consideration or not. There was no law to determine such sights, and no standard by which they could be measured. It is certain that, as a rule, such cultivators were not dispossessed so long as they wished to hold their fields ; but it may equally be asserted that if any individual for any reason were dispossessed, there was little chance of any remedy available to him. We have no details of the social arrangements of any former period when India was so settled and so well cultivated that cultivators had difficulty in obtaining land in one place or other. During the prosperous period of the Mahommedan empire the cultivators were no doubt in some sort protected. All the Mahommedan Regulations aim at that object. But during the century of anarchy which preceded our settled dominion, there was for them only the protection which circumstances afforded. In fact, the depopulation and reduction of cultivated area, resulting from a long anarchy, had almost everywhere occasioned a demand for cultivators, which, as soon as peace was restored in any province, rendered the position of the ryot in some respects favourable. Instead of being obliged to compete for land, he found that there was a competition for ryots. A ruler's strength and wealth, under a system of customary rents, depended on the number of his ryots and the extent of their cultivation ; and a man not embarrassed by local ties could generally make favourable terms.

As no one was evicted, the question of compensation for improvements never arose. It is not, however, altogether lost to sight. Wherever there is a question between the representatives of a declining body still claiming to be owners of the land, but not fully occupying it, and strangers holding it on terms not yet admitted to be permanent, the making of an improvement which cannot be removed—the building of a well, or even the planting of a tree—is always regarded with jealousy, as an act evolving ownership, or, at least, permanent occupancy. The Indian law does not, as with us, give to the proprietor everything that is put upon the land ; it remains the

property of the man who put it there. An Indian proprietor, therefore, does not claim a right to benefit by another man's improvement; he objects to his making the improvement, as involving a property inseparable from the soil. I have had such complaints in modern days. If an improvement of a solid immovable kind be made, I think the right of occupancy would be admitted. But unless a well be built or a grove planted, the ordinary agricultural requirements are so few as to give rise to little question of compensation. The house is built of mud, which is of no value, and the wood used for the roof is taken away by an outgoing ryot. The principal expenditure in the way of improvement is in bringing jungle into cultivation, and many of the recently-settled ryots had established that claim to permanency.

The general result seems to be that there was no definite law giving a right of occupancy to non-proprietary cultivators, and that the equitable claims of these men varied infinitely in degree. But there was in the general language of the country a distinction between ryots settled as permanent inhabitants of and cultivators in a village who had given pledges by building and clearing and establishing themselves, and had accepted a share of common obligations, and those other ryots who were avowedly mere temporary sojourners, or who, without sojourning at all, came from some other village to cultivate patches of land. The former were called "Khloodkasht," or "own cultivating," "Chapper bund," or "house-tied," and sometimes "Moorossee," or "hereditary;" while the latter were called "Pye-kasht," a term implying that they come and go at pleasure. The sentiment and feeling of the country was certainly in favour of the moral claim of the former class to hold the land as long as they cultivated and paid their rent. Some think that our Government might be justified in treating these men as tenants-at-will, and turning them over to landlords in that character; some think that they could not with justice be so treated. The latter was the view taken in the early days of our rule; the other is that held by those who in these days favour the idea of capitalist landlords. But either party would, I think, admit that in most parts of the country there was nothing to prevent the Government from recognising the position of the ryots and improving their status, if it was minded so to do, at the time of the first settlement of rights, and before incompatible rights were conferred on others.

In small native states the ruler very frequently collects his dues direct from the cultivators, with the assistance of the established headmen and accountants. The alternative mode of management is to farm out the right of receiving the State dues to mercantile speculators. In disturbed times, again, when it was not easy to collect dues in detail, it sometimes happened that the ruling power for the time being compromised with the villagers by agreeing to take from them a lump sum in lieu of all claims, and the villagers themselves allocated the burden according to holdings.

In these various ways were the land revenues collected by native rulers. But it is well known that, in some of the greater dominions, persons were found intermediate between the villagers and the Government, whose position had become more or less hereditary, and whose claims and treatment have given rise to much discussion. We must, then, examine the origin of these hereditary middlemen. First, however, we should be clear about the meaning in which we use the words "zemeendar," and "ryot."

"Zemeendar" is a Persian word, signifying literally "landholder." It has been, however, variously applied to different classes connected with the land. The Mahommedans seem originally to have used it very much as we use the term "native," applying it to the people of the land. But eventually they applied it to the holders of the tributary tenures not brought under complete subjection. Under the Moguls the semi-independent territories are always called the Zemeendarees. Great Rajpoot chiefs and others were known as "Zemeendars." In Bengal and other districts the term came to be applied to the great middlemen, who rose to power in the decline of the empire; and the name may have had some weight in bringing about the policy which made them proprietors. But a little farther north we find the same name applied to the small village proprietors; and farther north again, in the Punjab, the term is universally applied to simple peasants. I have often asked a man on the road-side, "Who are you?" and got for answer, "Oh, a poor man—a Zemeendar!" And as the Jats are the great cultivating tribe in the Punjab, the terms have come to be used as synonymous; and a man will often tell you he is a Zemeendar by Caste, meaning a Jat.

I shall try to use the word as much as possible in its

ordinary English acceptation of a holder between the State and the actual cultivator.

"Ryot" is a word which is much more misused. It is Arabic, but no doubt comes through the Persian. It means "protected one," "subject," or "commoner," as distinguished from "Raees," or "noble." In a native mouth, to the present day, it is used in this sense, and not in that of "tenant." Not only all classes of cultivators, those who claim the strongest rights equally with those who claim none, but also weavers, carpenters, and labourers, call themselves ryots. To simplify matters I shall apply the term to cultivators of the land, proprietary or non-proprietary, as distinguished from the holder intermediate between the ryot and the State. It is very important to note the meaning of this word, because the persons on whom very strong rights are conferred by the early regulations or by subsequent laws, are officially called "ryots," and by merely translating the word "tenants," it is assumed that rights were arbitrarily bestowed on persons holding the position of English tenants.

In the ancient Braminical accounts of Hindoo institutions as they ought to be, we find mention of district officers who seem to have filled much the same position in larger areas which the village headmen fill in villages. They were lords of one thousand, of one hundred, or of ten villages, and were apparently hereditary officers. I do not know whether the Marattas derive similar offices direct from earlier times, or whether they have been re-invented by the Maratta Bramins, but we certainly found in Maratta countries an established system of "Deshmooks"—officers exercising a jurisdiction in considerable tracts—and "Deshpandyas"—district accountants for similar areas. A proprietary character has, however, never been attributed to these men, and they have been for the most part pensioned off.

In the days when the Mahommedan rule was vigorous, there was little intermediate tenure between the State and the people; but in proportion as the central power declined, smaller authorities rose. In the long period of anarchy there was, under a nominal imperial rule, a partial return in many parts of the country to native rule and to the Hindoo system of petty chiefships. Out of these it may be said that the larger modern Zemeendarees have sprung.

I would trace them to the following principal origins :—

First. Old tributary rajas, who have been gradually reduced to the position of subjects, but have never lost the management of their ancient territories, which they hold rather as native rulers than as proprietors. These are chiefly found in outlying border districts and jungly semi-civilised countries.

Second. Native leaders, sometimes leading men of Hindoo clans, sometimes mere adventurers, who have risen to power as guerilla plunderers, levying black mail, and eventually coming to terms with the Government, have established themselves, under the titles of Zemeendars, Polygars, &c., in the control of tracts of country for which they pay a revenue or tribute, uncertain under a weak power, but which becomes a regular land revenue when a strong power is established. This is a very common origin of many of the most considerable modern families, both in the north and in the south. To our ideas there is a wide gulf between a robber and a landlord, but not so in native view. It is wonderful how much, in times such as those of the last century, the robber, the raja, and the Zemeendar run into one another.

Third. The officers whose business it is to collect and account for the revenue have frequently, in disturbed times, gained such a footing, that their rendering of an account becomes almost nominal, and practically they pay the sum which the ruling power is willing to accept, and make the most of their charges.

Fourth. I have alluded to mercantile contracts for the dues payable by the ryots, held by persons in the position of farmers-general. To a weak Government this system is very tempting, and in the decadence of the Mogul empire enterprising bankers, and other speculators, taking contracts of this kind, exercised great authority, and handed it down to their successors.

There are infinite varieties of the phases which the matter may assume, one of these characters passing into the other, so that a Zemeendar may have sprung partly from one and partly from another of these sources.

The tendency of everything Hindoo is to become hereditary. The son becomes, by the mere fact of his birth, the partner of his father, and so a family interest is established in everything. Thus contracts and other holdings passed from father to son, and when we found them well established, the holders have passed into the category of Zemeendars.

Where there is a recognised chiefship or office, it is understood that, as it cannot be divided, one man must hold it. Great Zemeendarees have therefore generally descended to that member of the family who was best fitted, and of whom the superior power approved. There was something corresponding to primogeniture, modified by circumstances.

With the usual tendency of Hindoo institutions to a feudal character, we constantly find that, under great Zemeendars, sub-holders have sprung up, sub-chiefs of the original raja, or the original robber; inferior officers, sub-contractors; and these, acquiring permanence in a manner similar to their chiefs, have sometimes survived when the chief has fallen, or are sometimes found holding under him.

Whatever the character of these various classes of hereditary or semi-hereditary middlemen, one thing may broadly be said of them all, that they were the representatives of the governing powers, the delegates of the Government, receiving the dues of Government. The status of the cultivators was not altered. Where there were strong village proprietors they held the same position under the Zemeendar; where their position was not so strong the Zemeendar exercised the functions which the Government officers would have exercised. This only may be said, that a small ruler may exercise a more minute interference than a great ruler. But still the relation was between governor and governed, or at most between payer and payee of the customary rent; there was nothing like our relation of landlord and tenant.

Under native rule the rights in the land, whatever they may be, are not bought and sold in the market. As regards the occupancy of the peasants, the rent which gives the real value going to the Government, and the claim of the peasant being rather a privilege, deriving its value from sentiment, affection, and habit, than a property capable of being estimated in money, there was little room for mercantile dealings. Nor was there any margin of profit which admitted of systematic sub-letting. Transfer from one hand to another did occur, but the communities claimed a right of veto, and would not permit the entrance by purchase of a stranger disagreeable to them. The general feeling prevented a man from alienating his land for ever. Hence, if the occupant was unable to cultivate his land or to pay the revenue, when he did not simply run away, the ordinary form of alienation was, not by selling or letting, but

by mortgaging, if the term can properly be applied to the transaction. The mortgagee, or depositary, undertook to discharge what was due upon the land, and obtained the use of it, while the original owner retained an almost indefinite right of reclaiming it on repaying the mortgagee. Nothing has been more difficult to settle than the adverse claims of persons long in possession, and of others claiming to be very ancient mortgagors. As respects the superior tenures, they were so entirely of a personal and official character that they were in no degree transferable by ordinary sale.

It may be said, then, of all landed tenures in India, previous to our rule, that they were practically not transferable by sale; and that only certain classes of the better-defined claims were to some extent transferable by mortgage. The seizure and sale of land for private debt was wholly and utterly unknown—such an idea had never entered into the native imagination.

THE BENGAL SYSTEM.

Bengal proper was the first considerable province which came under British Administration. The later northern tribes had scarcely penetrated into that country, and the village institutions were not of that democratic, independent, self-supporting character which gives facilities for dealing direct with the people. The servants of the East India Company were then quite without experience of civil administration. Middlemen, more or less hereditary, Zemeendars, Choudrees, Talookdars, &c., were found in existence, and it was natural that foreigners attempting so new a task should avail themselves of the services of these men. No proprietary character was then attributed to them. It was quite understood that they were liable to be displaced for inefficiency or misconduct, and, in fact, they frequently were displaced. There was no well-established rule of inheritance. But still if a man did well, another of the family was generally permitted to succeed him. In the course of the various experiments which were made, these men may sometimes have had contracts for the revenue; but their recognised position was that of men bound to account to the British Government for their collections; and, in the Regulations of 1793, it is stated that up to that time their right was to take a perquisite of ten per cent. on the

revenue; or, as it is expressed, they were bound to pay into the Treasury ten-elevenths of their collections.

It would be foreign to the purpose of this paper to attempt to trace the various systems of land administration which were tried from the assumption of the Deewanee of Bengal and Bahar* to the time of the Permanent Settlement. All our modern history dates from the Regulations of 1793, establishing the latter measure and the code of laws which accompanied it. The circumstances and character of the Permanent Settlement of Bengal have been a good deal misapprehended.† It has been supposed that we were very new to and ignorant of Indian administration; that the British administrators mistook tax-collectors for landed proprietors, and by the laws then passed conferred upon them absolute property in the soil to the entire exclusion of the rights and claims of the inferior holders. Such views of the matter are very wide of the truth. British officers had administered Bengal for a whole generation. Circumstances make men, and in the papers of a much earlier period I have been greatly struck by the breadth of view and public spirit of many of the local administrators of those early days. At the time of the Permanent Settlement Lord Cornwallis was surrounded by men of ripe experience and knowledge. The preambles to the Bengal Regulations sufficiently attest that these men quite understood and did not over-estimate the real position of the Zemeendars, who were made proprietors, not in recognition of a right, but in pursuance of a deliberate policy. The unsatisfactory result of the systems of administration already tried had led to the belief that what was most wanted was permanence and security of tenure, and a grand experiment was made in that direction. I pass over here the sin against posterity (and so far I think that there was a financial mistake) which was committed in fixing the revenue demand for ever, instead of for a period. As respects the tenure of the land, it seems to me that there was not so much

* The imperial grant was of the Deewanee of Bengal, Bahar, and Orissa; but Orissa was in the possession of the Nagpore Marattas, and we only acquired it from them in the beginning of the present century.

† I must confess to have been under a misapprehension myself, and to have to some extent taken part in misleading others on this point, when I published "Modern India." At that time I had no official connection with Bengal proper, and adopted the popular view. I had since spent some years of my life in dealing officially and judicially with the land tenures of Bengal, and give the present statement in correction of that which I previously made.—G. C.

error as is generally supposed. The Government having found the uncertainty of tenure of the Zemeendars and others to be attended with much evil, made the Zemeendars in one sense proprietors. As between the Government and the Zemeendars the claims of the former were strictly limited, and the Zemeendars became proprietors, instead of mere revenue officers; but they were by no means made sole and absolute proprietors. As one of the English lawyers on the bench of the High Court at Calcutta said of the original enactment in his judgment on the great Rent Case (decided in 1865), "This Regulation teems with provisions quite incompatible with any notion of the Zemeendar being absolute proprietor." These provisions may be said in brief to have given, so far as the theory of the law goes, to all under-holders down to the ryots, the same security of tenure as against the Zemeendar, which the Zemeendar had as against the Government. Sub-holders of Talookas and other divisions, under the Zemeendars, were recognised and protected in their holdings, subject to the payment of the established dues. As respects the ryots, the main provisions were these: All extra cesses and exactions were abolished, and the Zemeendars were required to specify, in writing, the original rent payable by each ryot at the pergunnah, or established rates. If any dispute arose regarding the rates to be so entered, the question was to be "*determined in the Dewany-Adawlut (Civil Court) of the Zillah in which the lands were situated, according to the rates established in the pergunnah for lands of the same description and quality as those respecting which the dispute arose.*" It was farther provided that no Zemeendar should have power to cancel the pottahs (or specifications of rent) except on the ground that they had been obtained by collusion, at rates below the established rates; and that the resident ryots should always be entitled to renew pottahs at those rates. Even on a sale for arrear of revenue (which cancelled all superior rights), the purchaser was to have no power to evict any resident ryot unless he refused a pottah at the established pergunnah rate. Thus, in fact, fixity of tenure and fixity of rent rates were secured to the ryots by law. In Bengal proper, the proportion of the produce had very generally been converted into money rates, and thus these fixed rates were, in fact, fixed rents. Provision was at the same time made for the maintenance both of the Canoon-goes or district registrars, and of Patwarees or official village

accountants, an object of whose appointment was declared to be "to prevent oppression of the persons paying rent."

In addition to these specific provisions there was the general provision, often quoted, reserving a power of future interference in behalf of the inferior holders. "The Governor-General in Council will, whenever he may deem it proper, enact such regulations as he may think necessary for the protection of the dependent talookdars, ryots, and other cultivators of the soil."

As the early Regulations were construed by the judicial tribunals, the law was settled to be that, under the general provisions in favour of sub-holders, every man, whether ryot or of any other class, who had held for twelve years before the permanent settlement (that being the Indian term of prescription) at a uniform rent, was entitled to hold for ever at that rent, whether it was or was not below the established rates; other resident ryots were entitled to hold at the established rates, but if holding below the customary rate, could be enhanced up to that point.

The Zemeendars were authorised to appropriate to their own use the difference between the sum which they engaged to pay the Government and the established rates, "which formed the unalterable due of the Government according to the ancient and established usage of the country." They were, moreover, encouraged to exert themselves to bring the waste lands into cultivation, and to induce the ryots to cultivate more valuable articles of produce, by the assurance that all that was thus added to the rent-roll should be their own. The whole of the waste lands were thrown into the holdings of the Zemeendars without additional charge, except in the case of some remote parts of the country, uncultivated and unpopulated, where there were none to claim the land or pay revenue for it.

So far as I can judge, I should say that the recognition of the position of the Bengal Zemeendars was not more than would have been to some extent done in modern days in any part of India in which the Ryotwar system, pure and simple, was not adopted. There was a time when their claims might have been more rigorously scrutinised, and in Bahar (which, though attached to Bengal, is quite a Hindostanee province) the claims of the chiefs prevailed over those of village holders to a much greater degree than would have been the case when the present north-west provinces were settled. But in Bengal proper,

where the village system had so little cohesion, I doubt whether at any period of our administration we should have quite set aside the Zemeendars. They not only had a certain position and certain claims when we assumed the administration, but we had ourselves dealt with them and used them for upwards of a generation. To set them aside altogether would have been a very strong measure.

In fact, the settlement was by no means made with the great Zemeendars exclusively; when holders of smaller degree were thought to have stronger claims, it was made with them. There were many such small holders; and in one or two of the eastern districts of Bengal the mere cultivators were found to have the best claim, and the settlement is, for the most part, to all intents and purposes, ryotwar.

As respects revenue, the Zemeendars were subjected to immediate terms very much harder than those which are now accorded. The Government demand was fixed at ten-elevenths of the then rent-roll.

On the whole, my impression is that (perpetuity of revenue apart) the principles of the permanent settlement of Bengal were in the main good and sound, and that the ground for subsequent complaints is to be found not so much in those principles as in the failure properly to carry them out, and in the ideas which afterwards arose from a misinterpretation of them.

The original intention of the framers of the Permanent Settlement was to record all rights. The Canoongoes and Patwarees were to register all holdings, all transfers, all rent-rolls, and all receipts and payments; and every five years there was to be filed in the public offices a complete register of all land tenures. But the task was a difficult one: there was delay in carrying it out. English ideas of the rights of a landlord, and of the advantage of non-interference, began more and more to prevail in Bengal. The executive more and more abnegated the functions of recording rights and protecting the inferior holders, and left everything to the judicial tribunals. The Patwarees fell into disuse, or became the mere servants of the Zemeendars: the Canoongoes were abolished. No record of the rights of the ryots and inferior holders was ever made, and even the quinquennial register of superior rights, which was maintained for a time, fell into disuse. When a regular police was established, the Zemeendars were in practice

freed from any effective responsibility for the suppression of crime or other administrative functions. They became in every sense mere rent-receivers. The Bengal principle of non-interference on the part of the Government was pushed to the point which may be said to have culminated in the famine of 1866, when the authorities so long refused to interfere, not because the Zemeendars did anything for the people, but because, according to the Bengal theory, they ought to do so.

At the same time that property in land was recognised by the Regulations of 1793, it was made freely transferable by sale, and in every respect put on the footing of property. The original code declared the custom of descent to a single heir, existing in certain large estates, to have been an invention of the Mahommedans for revenue purposes, and abolished it, laying down that the descent of all estates was to be regulated by the ordinary Hindoo and Mahomedan laws, applicable to any other property. But a subsequent regulation modified this provision, and permitted the rule of primogeniture in some jungle and other districts, where it was well established. To this day I believe that it is not very clear what estates do and what do not descend to a single heir; but the matter is not so important, because the courts have recognised the power of Hindoos to make wills. The Hindoo laws say nothing of wills, and it is very doubtful whether they should have been admitted; but the courts, acting on English precedents, having once admitted them, this curious result has followed, that, in the absence of any provisions to limit them, the power of a Hindoo in Bengal to tie up his property by will seems to be almost unlimited.

A creditor has the most summary power of selling all the landed rights of his debtor in satisfaction of debts of any kind. And it was part of the system that, permanent rights of property being once recognised, and the revenue being so fixed that the Government could no longer demand any increase, the reserved rent of Government must be paid with unfailing regularity. Failing payment on the appointed day, the estate is put up to auction, and knocked down to the highest bidder, with a clear and complete title against all comers. In the first years after the settlement this provision was very operative, and a large proportion of the newly-created proprietors were sold out. Subsequently the Zemeendars have learned punctuality; but sales for debt are always constant. It may be said, then, that

from the very first an encumbered estates court has been sitting in permanence in every district.

It has been epigrammatically said that Lord Cornwallis designed to make English landlords in Bengal, and only succeeded in making Irish landlords. This, however, hardly expresses the truth. He certainly sanguinely hoped that security of tenure would induce the Zemeendars to perform duties in the way of improvements in which they have entirely failed; but it has been shown that nothing was farther from the thoughts of Lord Cornwallis and his advisers than to create absolute landlords after the English pattern. The design was rather to create something like what model Irish landlords ought to be. The theory and intention of the Cornwallis administration was to do for Bengal exactly what James I. sought to do for Ireland—to secure all parties, great landholders and cultivators alike, in their rights according to their degree. The subsequent sales of the rights conferred on the Zemeendars, and the failure to record the inferior rights, produced in practice in Bengal something of the same state of things which resulted in Ireland from Cromwell's confiscation of the rights conferred by James, followed as it was by the *de facto* restoration of the Irish cultivators to their holdings. In Bengal, as in Ireland, the cultivators were protected by custom and public opinion rather than by an efficient administration of the law. The landholders were men who did nothing for the land, but only received (generally through middlemen), the customary rents from the cultivators who tilled old fields or cleared new ones. Still there were not in Bengal the differences of race and politics which have embittered the social state in Ireland; and religious differences do not there lead to the same bad blood. Hindoo and Mahommedan generally live in an amity which Roman Catholic and Protestant may well imitate. So far, then, Bengal has been in a much better state than Ireland.

The margin of profit left to the Zemeendars was at first so narrow, and habits were still so native, that it is scarcely surprising that for many years there were complaints of the illegal levy of the cesses and imposts so universal under native rule, and of exactions from the ryots, still poor and abject. But as, with peace and prosperity and the rise of prices, the condition of the ryots has improved, the rates levied by the Zemeendars have scarcely increased in an equal degree. The Bengallee

was not a very pushing landlord; he was generally content to take what he can claim according to the custom, with such additions as his agents can quietly manage; and for the rest he was satisfied with the enormous increase of income which the, as it were spontaneous, increase of cultivation had given him. On the whole, then, the relation of Zemeendar and ryot had not been unfriendly till English ideas were brought into play. The Zemeendar scarcely ever sought to take into his own hands more land than his old "seer" or demesne. Population had not yet reached the point when there is a severe struggle among cultivators for land; and there was no such thing as any desire to evict tenants. Many of the ryots in Bengal proper came at last to be tolerably well off, sitting at pretty easy rents, which gave them some margin of profit and attached a certain value to their holdings.

In order to prevent the fraudulent or improvident disposal of the assets from which the revenue was to be paid, the Zemeendars were at first prohibited from giving leases of any parts of their estates for terms exceeding ten years; but some years later this restriction was withdrawn. In Bahar, where there are many large estates which descend undivided, they are let in portions for short terms of years to mercantile speculators, who make the most of the ryot—an arrangement almost universal under such circumstances. The mercantile class of those parts are a pushing set of men, but having no permanent interest in the soil, the practice has all the disadvantages of the middleman system. The ryots have not even the advantage of a landlord who has some interest in keeping them alive; and in that part of the country they are much more rack-rented and more ousted from their rights than in Lower Bengal.

In Bengal proper, where there is less of the mercantile spirit, the custom has sprung up of giving sub-leases in perpetuity for a consideration. The great estates have thus been split up by a system of sub-infeudation; and it may be said that practically most of the land in Bengal is now in the hands of permanent landowners of moderate calibre. Many ryots and other small holders, even when they cannot prove a title from the permanent settlement, have obtained perpetuities by payment of a fine. And so it happens that, under the shadow of the permanent settlement, a very wide-spread system of perpetuities of all grades has sprung up.

Perpetuities are always transferable, and the inferior like

the superior tenures can be summarily sold for arrears of rent. Where there is a mere right of occupancy at the customary rates, the sanction of the superior holder is ordinarily required to a transfer by sale; but in some districts the Zemeendars interfered so little, and were so glad to have the security for their rents afforded by saleable tenures, that the ryots' tenures have become by custom entirely transferable, and the state of things is very similar to that prevailing in the north of Ireland.

The Hindoo laws and customs divide property among all the sons or other agnates. Failing sons, a widow succeeds on a very limited tenure; and, in Bengal, daughters and other female relations also succeed after the widow, when there are no sons. The Mahomedan law of inheritance is extremely complicated, and creates a great complication of shares. The result of the operation of these laws for several generations has been the creation of a very large number of interests, present and contingent, in almost every estate. The law gives to every shareholder the right of partitioning off his share; but where there is no survey and no record, and no machinery in the hands of the executive Government, the attempt to divide through the courts an estate not in possession of the parties, but held by ryots, and of which the parties themselves scarcely know more than the rent-roll, is in practice attended with enormous difficulties. The process is seldom attempted in Bengal, and still seldomer brought to a successful issue. Thus, then, almost all estates are held in undivided shares by several or many people—and others have reversionary rights. It is very singular how many of the higher classes of Hindoos die childless, and how many widows' life tenures result. The tenure of Hindoo widows is peculiar in the extreme. They have no power to administer for useful purposes, so as to give leases, &c., beyond their own lives, but under Bramin-made laws they can do many things in favour of Bramins, and for superstitious purposes. They are constantly in the hands of Bramins, and constantly trying to make away with the estates for the benefit of their own relations, or of their Bramin friends, to the prejudice of the husbands' heirs. Altogether the tenure is a most noxious one, and gives rise to half the litigation in Bengal.

When we have, then, concurrently, a system of inheritance leading to constant subdivision of rights, without division of

tenures ; a vast system of sub-infeudation in every form and degree, and on every condition, at the unrestrained pleasure of the parties ; and then perplexing and injurious widow holdings coming as constant faults to disturb the course of every tenure ; all this overlaid on a system originally complicated and unrecorded, it may be supposed that there is an ample field for litigation in the courts. To this it must be added that our judicial system has encouraged to the utmost the worst technicalities of law, and a practice under which witnesses have been numbered rather than weighed. To such an extent has the habit of playing at law been carried, that it has become the common practice to purchase and hold land in any fictitious name rather than a man's own. The most respectable man feels that if he has not need to cheat any one at present, he may some day have occasion to do so, and it is the custom of the country ; so he puts his estate in the name of his wife's grandmother, under a secret trust. If he is pressed by creditors or opposing suitors, it is not his ; if his wife's grandmother plays him false, he brings a suit to declare the trust. To any one who should follow any land suit, taken at random from the files of our courts, in its inception, origin, and progress through many appeals to a final decree, and then should observe how the attempt to carry out the decree breeds half a dozen new suits, the wonder must be how any people can tolerate such a state of things. It is, however, remarkable how the world adapts itself to circumstances. The apparent evils are mitigated by two considerations ; first, the litigation of nearly a century has produced a certain record of rights in the shape of recorded decisions, which give a certain solid basis for future proceedings ; and second, litigation is to a Bengallee what alcohol and stock-jobbing together are to our countrymen, and opium and the opium trade to the Chinese—it is his stimulant, and his form of gambling ; and in some sense he likes it. Every Bengallee, high and low, treasures as his Lares and Penates an endless assortment of decrees of court, and other processes, which he unfolds to every one who will listen to him.

The grand difficulty in purchasing land in Bengal is to make a title. A purchaser can never be sure that some one will not start up and declare the seller to have been a mere man of straw. In truth, too often a litigious person buys from a man of straw a nominal property which is not in his

possession. The only safe title is a purchase under a sale for arrear of revenue.

Notwithstanding all drawbacks, the desire to possess landed rights is so great, and so much money has accumulated during a hundred years of peace, for which there is great want of means of safe investment, that land has come to bear a very high price indeed. The profits of the superior holders are now very high, and the prices paid are such as to yield but a small rate of interest on the money invested.

It would be sufficient subject for a separate treatise to discover why it is that evils attending joint holdings much subdivided (without corresponding facility of partition and transfer), which are so evident in all tenures above those of the cultivators, are not so marked as respects the holdings of the cultivating ryots. Their tenure is simpler; being at the bottom, there are seldom complications under them; they are on better terms with one another, and less skilled in law. They, too, have generally had a good deal of litigation; but if they can only settle their rights, as between them and their landlords, they generally settle their own family affairs out of court. A large proportion of the holdings are certainly very small; but, except in time of general failure of crops and universal famine, the people support themselves without poor laws, and do not trouble us. We really know wonderfully little of the social arrangements of the lower classes. They are independent, and that is enough for us. The Irish form of difficulty—over population and insufficiency of land—had not till recently troubled us. But the population is certainly much increasing, and this phase of the question may not be far off.

I have alluded to the failure of the Bengal Zemeendars to perform the duties of landlords. In fact, to expect of them the duties of an English landlord, to build, and plant, and introduce improved agriculture and improved machinery, if it ever was expected, was a mere chimera, and not reasonably to be looked for under the circumstances. Those are not the functions of a native landlord. If a man encourages and protects the ryots who break up his waste and till his lands, and deals faithfully and equitably by them, he is considered to do his duty. If he further acts the part of a capitalist money-lender, and advances money and seed, to be repaid with interest at harvest time, he does something more; and if the interest exacted is not too exorbitant, he is a model land-

lord. In the very large estates the intervention of middlemen renders it impossible for the landlord to perform these functions, and he does not do so. In moderate estates he might do so, but in Bengal the complications of existing and contingent titles are so great that few have the power, if they have the will; and they are generally little disposed to do much. The virtues of a Bengallee landlord are rather negative than positive. Perhaps the ryots might fare worse than under the King Log sort of rule which prevailed till we taught the Zemeendars the rights of property.

In India, as in Ireland and many other countries, the tenure of land affects the happiness and determines the content or discontent of the people more than all other laws and administrative acts put together, and a main test of the success of the land system is to be found in the political feelings of the people. The advocates of the Bengal system of management are wont to quote the quiet and loyalty of the people of Bengal during the mutiny as a proof of the excellence of their system. It is impossible to compare a country far from the scene of the military outbreak, and inhabited by an unwarlike people utterly alien to the Sepoys (whom they personally detest), with countries which were the immediate scenes of the mutiny and the home of the Sepoys; but still, no doubt, those days, when the British power seemed to be for a time almost in abeyance, afforded great opportunity for the outbreak of discontent in any part of India. The population of Eastern Bengal is chiefly Mahommedan, and there are many of those reformed Mahommedans whom a little persistent persecution may make our enemies. Although Bahar was much disturbed, Bengal certainly remained perfectly quiet throughout the mutiny; and when, towards the end of the crisis, a Sepoy party stationed in Eastern Bengal threw off the allegiance, they were even actively opposed by the people. Without, then, admitting that the system is in all respects good, I think it may be said that the people were not, at that time, seriously discontented with our rule.

I reserve to a subsequent part of this paper a notice of recent legislation affecting the tenure of the land.

THE SYSTEM OF THE NORTH-WEST PROVINCES.

For some years subsequent to 1793 the views which had led to the permanent settlement of Bengal still prevailed. A

part of the Madras presidency was permanently settled with great Zemeendars. The permanent settlement was also extended to the Benares province, but there, in consequence of its being attached to the north-west provinces, where a different system prevailed, a record of inferior rights has been made.

In the early years of the present century the obligations towards us of our ally, the Nawab of Oude, were settled by a partition of his country, half being retained by the Nawab, and half made over to the British Government. About the same time a considerable territory in the same part of India, which had been overrun by the Marattas, was acquired by their repulse. We thus obtained the command of most of the upper Gangetic valley, or rather plain—the proper Hindoostan; and the territories so acquired are those known as the north-west provinces.

Soon after their acquisition the Government proclaimed its intention of making a permanent settlement on the Bengal pattern—a declaration which is still referred to as an embarrassing pledge. But other counsels soon prevailed. Great doubts were thrown on the advantage of the permanent settlement system; the settlement of the north-west provinces on the same system was first postponed, and then altogether abandoned. Thus it has happened that, while in the lower provinces of Bengal and Bahar the system has been, as I have explained, exaggerated and intensified in one direction, the northern provinces have fallen into a different groove, and the land policy has taken another direction.

The doubts and differences of opinion which prevailed led to a succession of short temporary and provisional settlements of the new territories, without any minute investigation of rights. Short leases were given to the parties most easily accessible; and where there seemed to be none possessed of any hereditary or quasi-proprietary claims, the villages were let to farmers. Wherever there was any appearance of rights they were ruthlessly sold when the revenue fell into arrears, and great abuses resulted, to the profit of our subordinate officials and their confederates, who acquired much of the land which they brought to sale. A special commission subsequently inquired into and partially redressed these abuses, but it was felt that some more settled system was necessary. This state of things led to the famous Regulation VII. of 1822, which is

the basis of all subsequent land arrangements in all parts of Northern India. The system of fixing the land revenue in perpetuity was abandoned, settlements for long periods being substituted ; but private property in the land was none the less to be as fully acknowledged as in Bengal. The landowners were, in fact, to have long leases, with a right of renewal at a revaluation at the end of the leases. Their rights were to be freely transferable, and completely regulated by law. No one class was to be arbitrarily invested with these rights, but an exact survey and complete inquiry was to be made ; the parties best entitled to proprietary rights were to be ascertained, and with them the Government revenue was to be settled ; while at the same time all inferior rights of every description were also to be fully ascertained, described, and recorded. A very important provision was this, that where two or more parties, superior and inferior, were found to be possessed of concurrent rights in the same land, the Government officers were empowered either to settle directly with the superior, and to make a sub-settlement between the superior and inferior holders, or to pension off one party with a percentage (in compensation for the rights which he had heretofore exercised), and to make the settlement with the other.

The ryots were to be divided into old settled ryots having a right of occupancy so long as they paid a fair rent, and ryots who had acquired no such rights ; but the tests by which this right was to be determined, and the standards by which the rent was to be fixed from time to time, were not defined with such accuracy as might have been desired.

There was, however, to be a general record of the rules and customs of every village available for future reference.

Minute calculations were to be made of the value of agricultural produce, and of the share of that produce to which Government was entitled, and from these calculations money rates were to be deduced, from which, after due allowance for the expenses and profits of the proprietors, the Government revenue was to be calculated and fixed.

I think that one error to some extent pervades these excellent provisions, and has embarrassed all the operations founded on them—I mean the assumption that distinct proprietary rights everywhere exist, which we have only to ascertain and record. The fact is, that, as I have before tried to show, such rights exist in a strong form only in certain parts

of the country ; in others they are but inchoate and rudimentary ; in others they have fallen into decay and almost into abeyance ; in some they hardly exist at all. The consequence was that the function of the settlement officers has been to a great degree not only to ascertain rights, but also to create a class of rights which did not exist before, or, at any rate, to give them a form and substance which they did not before possess. Great scope was thus left for individual discretion ; and in the absence of distinct provision for the cases in which that which did not exist could not be ascertained, individual prejudices were carried a long way in one direction or other. Much difference of opinion, and many official battles have resulted. I think it would have been better if the Government had boldly recognised the fact that to arrive at complete private property a great creation of rights was indispensable, and had distinctly determined on whom and in what degree those rights were to be conferred, what was to be given to great Zemeendars, what to village headman, and what to the ryots, instead of leaving those questions to be fought out by the local officers in every case. As it is, there has generally been (as in most matters in which Englishmen are concerned) an aristocratic party and a party of the people ; a party which would give as much as possible to the rich and gentlemanlike natives, the descendants of ancient rajas or sons of modern farmers-general, and trust to them to rule the people ; another, which, considering that it is our function to protect the people from the tyranny of native rulers, would give as much as possible to the people, and restrict the aristocracy to their actual rights. Either course is possible under the law, for by putting the people to the proof, and giving them no more than they can prove a right to, all the rest falls to the aristocrats ; by putting the aristocrats to the proof, and giving them no more than *they* can prove a title to, there is ample room to give the people very large rights.

On one point all administrators in all the provinces which have been administered by the Bengal Civil Service (the name is applied to the whole service, which comprises the separate Bengal and north-western branches), or by officers associated with them under the Government of India, have agreed—viz., that under no circumstances whatever will the Government deal direct with the individual ryots, as in Madras and Bombay. If there is no intermediate proprietor or office holder

of some kind who can be taken as such, and the villages have not a complete constitution enabling them to deal with the Government in a body through their representatives for a lump sum to be paid jointly, a proprietor must be found or created. In the north-west provinces every village is settled in the lump with some person, family, or joint body.

For some years the proceedings under Reg. VII. of 1822 did not progress satisfactorily. It turned out that the machinery at the disposal of Government was quite inadequate to the vastness of the work which had been undertaken; and the attempt to obtain reliable revenue rates by a calculation of the value of produce and cost of production was found to be fallacious and impossible. In 1833 the requisite machinery was supplied by the employment of natives in posts hitherto confined to Europeans; and it was determined to calculate the revenue of each village in the gross, with reference to actual past receipts, and to allow the parties interested to distribute it under the superintendence of the settlement officers. An energetic settlement school sprung up; and in the course of the following eight or nine years the whole of the north-west provinces, yielding an annual revenue of some £4,000,000, was settled, and all rights and holdings of every kind were voluminously recorded in great detail.

This settlement was mainly carried out under the superintendence of Mr. Robert Mertins Bird, Mr. Thomason being one of his most active subordinates; but as it afterwards fell to Mr. Thomason, during a long incumbency as Lieutenant-Governor, to administer the system, it is popularly associated with his name.

The battle between the officers who supported the claims of the aristocracy and those who took the more popular view raged with intensity in the course of the settlement. Neither one nor the other entirely prevailed; but the party which looked with disfavour on aristocratic claims had eventually more support of authority than the other. Many large Zameendars were maintained in their position; but in many cases, where they had hitherto held from Government, village proprietors were found to have claims to a sub-settlement under them; and in some instances they were altogether set aside with an allowance, and the settlement was made with the sub-proprietors, under the provision for such cases which I have mentioned.

The supporters of the aristocracy assert that in some places village claims which had been long ago overridden and trodden out, during the troublous times which preceded our rule, were arbitrarily revived, to the prejudice of the great landlords, who had exercised complete authority.

On the whole subject of this settlement it must, however, be understood that the settlement officers and the Government under whom they acted had no arbitrary powers; the civil courts were open to all, to contest and bring to a judicial decision the justice of their awards; and by the higher classes especially that remedy was freely resorted to.

The proprietary rights having been determined, the principle followed was to take two-thirds of the then rental as Government revenue, leaving to the proprietors the remaining third and all future increase during the term of the settlement, which was fixed at thirty years. A proprietor objecting to the assessment fixed might decline the engagement, in which case the village was let to a farmer, and he had a small percentage—a good check on over-assessment. The waste lands were demarcated with the village boundaries, and included in the settlement. The survey was most minute. Every field, however small, was measured and mapped, with the name of the occupant and the rent.

Perhaps the part of the settlement which was least guided by any uniform rules was that which distinguished between hereditary occupancy ryots and tenants-at-will. The fact is that there was no contest on the point. The ryots hardly understood the distinction, the question of eviction never having been raised; and the Zemeenders did not press any claim to evict so long as they got their rents. It was thus left to the settlement officers to do very much as they liked on this point. A practice sprang up—it is not clear how—to consider that all cultivating ryots who had been in uninterrupted possession for twelve years, without special contract, should be taken to have a right of occupancy; and in most districts that rule was followed. No doubt, as matter of prescription, the holding of a tenant-at-will or from year to year is not adverse to his landlord, and so far there was no legal justification for the rule. But in the absence of any other rule, and in the absence of contest, the rule was probably as good as any other which could have been suggested, and had some support from the analogy of judicial decisions in the case of the Bengal ryots. If the

Government, when conferring such great benefits upon those who were made proprietors, had in so many words established by law this rule in favour of the ryots, there would have been no complaint; but since the rights of the proprietors have been established, and are taken for granted, it has in recent days been said that the settlement officers gave occupancy rights to ryots who had no sufficient title.

Nothing was declared as to the power of the Zemeendars to raise the rents of occupancy ryots for any cause during the term of the settlement. The power to realise rent by summary proceedings before the collector was restricted to the recorded rent heretofore payable; but it was eventually decided in the civil courts that a Zemeendar was entitled, on showing that causes independent of the exertions of the ryot had raised the value of the land, to obtain by regular suit an increase of rent. The course or procedure was, however, difficult, the right hardly known; and I think it may be said that in practice the occupancy ryots held at unvaried rents, till the introduction of the new rent law, to which I shall come presently.

The result of the settlement of proprietary rights in the north-west provinces was to create a great variety of landholders of many different classes. I have said that many large Zemeendars retained great estates. In some parts of the country the settlement was made with cultivating village communities; but as the proper villages of this class are principally in the territory about Delhi, since transferred to the Punjab, I may leave them till I come to that province. In the greater part of the north-west provinces the settlement was most frequently made with small landholders and village proprietors, a class intermediate between the great Zemeendars and the true cultivating communities. The country is chiefly that in which the Rajpoots were at one time predominant; and a large proportion of the villages were of that class, to which I have before referred, where the original Rajpoot community or other similar body was considerably reduced in numbers, and did not cultivate the whole village, but still maintained a position of greater or less superiority over the ordinary ryots by whom they were surrounded. The proprietary rights of these families or groups of families were very generally recognised. The system is that they cultivate the lands in their own possession, and collect on common account the rents payable by the other ryots. The common receipts

are applied to the payment of the revenue, and any deficiency is supplied by a rate on the lands of the proprietors. Where a small family holds, and the rents of the ryots exceed the revenue and expenses, the surplus is similarly divided according to shares.

In the many villages where neither great Zameendars nor old proprietary families established claims, it being necessary to find some proprietors, a good headman or solvent farmer, or some other person of some sort, was established as proprietor.

The facility of sale and transfer afforded by the establishment of saleable property and authentic register of rights, with the frequency of compulsory sales through the civil courts, have brought into possession of many landed properties men of the mercantile and capitalist classes. These men are in Northern India very enterprising, and some of them have really done a good deal to plant ryots and develop the resources of the country in the native way.

The normal tenure of the north-west provinces may be said, then, to be that of moderate proprietors, with ryots under them, many of whom possess a right of occupancy at a fair rent. The security of tenure resulting from the settlement gave a great impulse to agriculture; there was peace and prosperity; the country flourished; property in land acquired a high value; and for a long period the settlement of the north-west provinces was held out as the perfection of Indian management.

In a great degree these praises were well deserved; yet there are some drawbacks. The immense records, pushed on rapidly to completion, were sometimes found to contain a good many errors, and required some revision and correction. Considerable inequalities no doubt occurred in the assessment of the revenue. The main drawbacks are, however, I think, the following:—

The establishment of property gave facility for obtaining credit, while the facility of resort to sale of landed rights in satisfaction of debts, and the strictness of the collectors' demands, rendered alienations very frequent. Those who most suffered in this way were the somewhat improvident classes—the old Rajpoot and such-like families—who were constantly sold out. If there was often economic gain in this process, there was political weakness, for the old proprietors—the most martial class in the country—remained on the land

in great numbers, reduced to the position of needy and discontented cultivators, holding under those whom they contemned as mere shopkeepers, and who were only kept in their position by the strength of British power.

Then, as the old headmen and others, who had been made proprietors of so many villages on account of their merits and prominence, died out, their properties often fell to people who had not their capacity; and they have been much subdivided under the laws of inheritance. The tendency in many of the small estates which at first seemed all that could be desired is, I think, to the gradual creation of a small proprietary class, above cultivating themselves, and not efficient as landlords.

Finally, as land became valuable and competition arose, it was found that the position of the ryots had not been sufficiently defined.

The north-west provinces were the principal scene of the mutiny. The Sepoys were almost all Hindostanees. For several months the British power was, it may be said, absolutely and wholly extinct throughout the length and breadth of these provinces. Anarchy, of course, resulted; it could not have been otherwise. To expect that a grateful people would keep the country for us under such circumstances, when they had seen their British masters slaughtered and driven away, would be too much. The old robber tribes resorted again to robbery; the strong took advantage of the weak; old feuds were fought out; every man's hand was against his neighbour. The judicial records containing obnoxious decrees were in many instances burnt. Yet I can speak with some authority when I say that there was nothing like a general popular war against ourselves; for I marched the whole length of the provinces as civil commissioner with the first column which came down after the fall of Delhi, and can say that there was not a symptom of popular resistance or hostility. With the exception of opposition from one or two considerable chiefs and Zemeendars, we everywhere walked into the villages and met the people as if nothing had happened. The moment our military power was re-established, they quieted down as a matter of course. While, then, this paper is designed rather to state facts than to offer opinions, I cannot but testify, as matter of fact, to the want of foundation for the suggestion at one time put forward in some quarters, that the events of the mutiny showed the total unsoundness of the settlement system of Northern India. On

every occasion of great calamity there is a disposition to say that whatever is, is wrong, and it was so on this occasion. It has been sometimes said in the public prints that the people took the opportunity of rushing back to allegiance to their old masters, the great Zemeendars; but no particulars of places or circumstances are given, and the statement is quite without foundation. Putting aside Oude, which had only been a few months annexed, and to which I shall presently come, I venture to say that great Zemeendars, who had long ceased to exercise their functions, seldom regained authority. It is true that, in this time of anarchy, good Zemeendars of large means and considerable power were able to maintain a nearer approach to order than existed elsewhere; but on the other hand, several men of that class took the opportunity of rebelling. What *did* very generally happen was this, that the ousted *village* Zemeendars, the families and communities of the arm-bearing castes, who had been recognised at the settlement but had been sold out (principally by the civil courts), took the opportunity of driving away the unmilitary purchasers, and resuming what they still considered to be theirs. This it was which was mistaken for a voluntary return of the people to the dominion of their ancient chiefs.

While, then, I have said that the north-west settlement is not, in all respects, the piece of perfection which it was at one time represented to be, on the other hand I say that nothing occurred in the mutiny to give the slightest ground for suggesting that it had wholly failed. It was, however, made apparent that the subsequent action of the courts, in too summarily alienating the rights of the village proprietors who had been properly recognised at the settlement, was a source of political weakness; and that lesson is one which has been borne in mind.

THE PUNJAB.

Much of the Cis-Sutlej Sikh country, and the Jullunder Doab were annexed in 1846, and the Punjab became British territory in 1849. To these were added the Delhi territory, and the whole form the present Punjab Government. The Punjab was settled on precisely the same principles as the north-west provinces. Lord Lawrence was bred a settlement officer under Mr. Bird, and the system was fully introduced.

The differences caused by local circumstances are chiefly the following :—

Although there are found in the Punjab, as in all provinces settled under Reg. VII. of 1822, a considerable variety of tenures, the majority are the complete village communities which I have described in the first part of this paper. These, then, may be taken as the normal Punjab type, on which the Punjab system is founded. The proprietary rights of the communities are fully acknowledged, and the settlement is made with them, each village undertaking the payment, through its representative council of elders, of the revenue assessed upon it, which again is distributed upon the individual members, in proportion to the land held and cultivated by them. Thus we recognise the proprietary right of the mass of the freemen—constituting, I should say, in most cases an actual majority of the population, and certainly almost the whole strength of the country. Practically, the settlement made with a community is very nearly ryotwar, with the difference that Government deals with the united body, and not directly with each individual separately.

Most of the Punjab people are far better cultivators and much more provident than the Rajpoots and similar tribes, and the Government officers have been more considerate; hence the sale of rights, in consequence of the non-payment of revenue, is little known. The revenue is paid with extreme punctuality.

Another most important distinction, as compared with the north-west provinces, is this, that in the first instance the unlimited interference of civil courts administering technical law on the principle of "*fiat justitia ruat cælum*" was not permitted. In those days it was considered that in the new countries, called non-regulation, the ruling authorities had, in the absence of specific law, restraining them, something of the old despotic power of the rulers to whom they succeeded. There were no independent judicial tribunals. The executive officers were invested with judicial powers. It was distinctly laid down as the rule of the country that landed property was not liable, as a matter of course, to summary sale in satisfaction of simple debts, such sales being only permitted with the special sanction of the higher authorities; and that was only accorded on a full consideration of the circumstances of the tenure and of the case, when it was considered that the course

was both just and expedient. These conditions being made fully known, no injustice was done to those who chose to lend money on such security as they could get. There was also, in case of sale of individual rights, generally a right of pre-emption in the other members of the same village community.

A large Sepoy army was quartered in the Punjab in 1857; and all the regiments which were not disarmed in time and guarded almost as prisoners broke into mutiny and rebellion. It may be admitted that the Punjab people had no love for the Sepoys, but still most of the European troops having marched to Delhi, an almost complete opportunity was afforded to a warlike and independent people only a few years conquered. It is impossible to suppose that if there had been discontent it must not have then burst forth. Yet it is well known that the people not only did not rebel, but gave us the most active assistance. We put arms in their hands; they fought the rebel Sepoys; the villagers hunted them down; troops hastily organised in the Punjab largely contributed to take Delhi. It may then very confidently be asserted that the system pursued in the Punjab had given satisfaction to the people.

It is constantly said, as matter of theory, by those who follow other systems, that the joint responsibility which the system of joint engagements involves must be bad; that it is a system which makes the good pay for the bad, the provident for the improvident. But, in fact, this is not so. The assessments are calculated to give, and do in fact give, much value to the land; if a man breaks down, others are always found most ready to take his land and pay up his arrears; it is generally not even necessary absolutely to transfer the land of the defaulter (although this may be done); the feeling of the country is rather in favour of transfer in the way of native mortgage, which gives the defaulter a sufficient period to recover his inheritance, on paying the amount advanced, if he can obtain the means by military service or otherwise. The theory of the northern settlement system gives every shareholder the right to have his land and his liabilities partitioned, if he likes to incur the necessary expense; but the privileges and advantages of membership of these communities are such that the shareholders seldom seek to carry the division farther than the partition of cultivated lands, which is the essence of the system. In course of time we shall probably come to

entirely separate properties ; but there is no need to hurry the process.*

Even if it be conceded that there might be some economical objection to the system of joint tenure, the main point is this, that by the indigenous system of joint engagements the Government is enabled at once to deal with the body of the cultivators, and to acknowledge and enlarge their rights, to the satisfaction of the people and advantage of the administration. It can do this without incurring the much more serious evils and drawbacks which have always been found to attend the attempt of a great foreign Government to deal separately with each petty holder, till many years and much experience have enabled it to do so in a way which is impossible in the first generation under our rule.

I will not here enter into farther details ; but I believe it must be admitted on all hands that in practice the Punjab system has been eminently successful. No one can have passed through the country without feeling that.

THE RYOTWAR SYSTEMS OF MADRAS AND BOMBAY.

The system known as the "ryotwar" is that of dealing separately with each ryot without joint responsibility. It has been mentioned that a part of the Madras territory was permanently settled with the great Zemeendars. In another part, on the western coast, there are peculiar tenures nearly amounting to complete property ; but my space will not admit of going into details ; and, in treating of Madras, I shall keep to the normal system of the greater part of the Madras territory, the ryotwar.

As soon as the orders for adopting the Bengal system were relaxed, the Madras authorities returned to their own system of management. They considered the Zemeendars and Polygars to be no better than robbers and tyrants, from whom we had delivered the people. Most of these men had been swept away in the wars of our early days, and those who

* The most curious proof that the natives do not necessarily prefer the separate to the joint system is found in the fact, published in some of the official papers of the Madras Presidency, that in that country villages were found which for half a century had submitted to the farce of a Government assessment on each individual, but had year by year lumped the individual assessments together, and redivided the total in their own way among the members of the community.

remained were put aside. The Madras authorities not only dealt direct with the people, but, insisting on strict economic justice in every individual case, they rejected the old system of joint village responsibility.

It is singular how much Englishmen, educated in the same way, and dealing with very similar institutions, have fallen into different grooves when separated in different localities in a foreign country. Perhaps no two sets of men bred in different planets could have diverged more widely than Bengal and Madras civilians on the land question. The fact seems to be that the country to which the rule of India has fallen is that of all the countries of Europe in which there is least that is analogous to Oriental institutions. And Englishmen, set down amid scenes entirely new to them, are very amenable to local influences. Local schools being once established, men isolated, and coming little into personal contact with those following other systems, maintain their own views with a persistence and intolerance which we do not find when men are brought more together.

It has been said that the different schools of Bengal civilians agree in this, that under no circumstances shall the Government deal direct with the individual ryots. The Madras civilians, on the other hand, made it the root and foundation of their faith that under no circumstances shall the Government deal with the land in any other way. Much of the country was really in that state which suggested the ryotwar system, there being none who could claim the character of proprietors, unless they had been created, as would have been the case in Bengal or the north-west. But it is abundantly clear, from the descriptions of the early administrators, that in some parts of the south there were village communities just as completely constituted as those of the Punjab, and well accustomed to pay the revenue in the lump, and manage their own affairs. The system was rejected as unjust and inexpedient; and, by the force of the Government, the communities were generally dissolved into the individual units, each man being separately assessed for the land which he held; although in some instances the villages maintained their system in spite of the Government.

In the early years of vigorous ryotwar management, a measurement and classification was made, in native fashion, of the whole lands of the country; every field was recorded, with the Government dues payable for it. Every ryot in possession

is secured so long as he pays the revenue so assessed. He may give up any field if he likes, and may take any unoccupied field. For long, a certain distinction was drawn between the meerasdars or hereditary and proprietary ryots, who had more fixed and positive rights, and the simple ryots, whose tenure was rather one of permission to hold than an acknowledged property; but, by a system of levelling up, this distinction may be said to have been eventually effaced in the ryotwar countries, and the ryots' holdings have become complete property so long as the revenue is paid.

A very important difference between a ryotwar system and the others which have been described is this, that in the ryotwar provinces all the waste and unoccupied lands are considered to be Government property, and, being separately assessed in fields or survey plots, are available to the first comer, native of the village or stranger, who chooses to take them upon the prescribed terms. Whether the settlement be made with the Bengal Zemeendar or with the Punjab village community, the lump sum assessed includes all the lands of each village area, cultivated and uncultivated; and the proprietors may make their own arrangements for cultivating the waste without increase of revenue, except when there is a new settlement. In Madras and Bombay it is not so; there for every new field cultivated the Government has an additional revenue. Where, as was till lately the case in some parts of Madras, the revenue is payable in the old native fashion (a proportion of the grain crop, varying rates for different kinds of crops, and so on), the Government also benefits by the increase of prices and spread of valuable products.

The advantages and disadvantages of the ryotwar system have been made very apparent in Madras. The bulk of the cultivators are peasant-proprietors owning their own land. The revenue is adjusted according to circumstances. When peace brought down war prices, it somewhat fell off; since the expenditure of British capital, and other recent circumstances, have enhanced prices and increased resources, it has greatly risen. But too much was attempted in the first instance. The survey was very rough, and the rates were certainly too high; so that for long there was not any sufficient margin to enable the ryots generally to attain an easy and independent position.

In early days, under Sir Thomas Munro, probably as much was done as was then possible; but the early operations were

not followed up during the next half-century as they might have been. No proper survey was made; in some districts the assessments once fixed in money were never altered, so that not unfrequently the best fields remained uncultivated, as being too highly assessed; while in other districts bad native systems were continued, by which the assessment varied with the crops—as where, when a man cultivated millet he was charged three rupees per acre, but if he introduced tobacco the charge was increased to 18 rupees per acre. Too much was necessarily left in the hands of native subordinates—very frequent remissions on account of bad seasons and other misfortunes were a recognised part of the system. Altogether, the state of things was such that some five-and-twenty years ago the Madras officers began to take a very pessimist view of their own system. They represented everything as very bad indeed, and urged the necessity of a new survey and settlement. Others, looking to the degree to which existing settlements had been ratified by prescription, and to the enormous cost of an exact survey, settlement, and record, doubted whether it was worth while to undertake the operation. A new settlement was however sanctioned. The Madras Government wished to fix the revenue at rates calculated with reference to the prices of produce, to be revised every few years—a plan which has been several times advocated, and which has much to recommend it—but the home Government decided to fix moderate money rates and to settle at those rates for thirty years.

From that day to this the settlement has been going on but very slowly, and it is not yet complete. Very little information has been given to the world, and the impression conveyed by what is known of the state of things during the famine of 1877–8 and otherwise is not very favourable to Madras management. No one seems to have risen up there to deal very effectively with the great and difficult questions connected with the land of the very extensive provinces under the Madras administration.

Still much has been done in the way of opening up the country by railways and public works, the prices of produce have very greatly risen, and there seems reason to believe that there has been a gradual though unequal improvement. Land, formerly almost valueless, now commands a high price, and some at least of the ryots are well off. I have not the information necessary to ascertain the effects of various influences in

modifying the original tenures. There have been some Madras officers who advocated the claims of some classes of landlords, and, at any rate, there has not been the same dislike to any tenure of this kind as in former times. I gather that in some districts, under the name of ryots, there are considerable proprietors, and there seems to be no check on men of means taking up considerable quantities of new land—nor is there any prohibition of subletting. Still the ordinary tenure of Madras is that of small proprietors cultivating their own land.

In Bombay, when the present territories were acquired, Mountstuart Elphinstone was much in favour of maintaining the village system, but eventually the Madras system of ryotwar management was generally adopted. Subsequently, when the successful settlement of the north-west provinces had called attention to these matters, a knot of able and energetic Bombay officers devised and carried out an improved ryotwar settlement. An exact survey and valuation was made by much improved methods. The land was permanently marked out by substantial boundary marks, in convenient fields or small blocks, and the revenue on each was assessed in money for thirty years. This survey-field is, however, not always or generally an actual field, it is a somewhat larger unit—often ten or twelve acres or more—and when, as is frequently the case, there are several different holders within this block a joint responsibility is imposed on them. They may subdivide as they choose for their own purposes, but no division is recognised for revenue purposes, nor can one portion be surrendered unless the whole is either given up or paid for. The rates fixed were extremely low—too low, some people thought—for the effect was a rush to take up and secure new land, and people took more than they could properly cultivate. There being, then, so much facility for extending cultivation on the one hand, and on the other an increasing demand for labour for railways, manufactories, &c., I understand that the tendency was found to be rather to the consolidation than to the excessive subdivision of farms, taking the country generally.

Under this settlement the Bombay territory enjoyed a period of great prosperity, and any reaction which might have occurred when the first freshness of the newly-cultivated fields was exhausted, was counterbalanced by improved communications and enhanced prices. Finally, the American war, by raising to an unheard-of price the cotton so largely produced

in Bombay, caused the prosperity of the ryots to culminate. Many of them were so well off that they might almost be described as rolling in wealth.

A reaction, however, was to come. Peace was made in America, and the excessive prices of cotton fell away. People who might have been still well off, if they had not learned extravagance, greatly felt the change. When the thirty years' settlements falling out new settlements came to be made, the Government claimed an increase on the former low rates, which prices and markets still quite justified, if judged by former standards, but which people who had become accustomed both to excessive prices and to exceedingly low revenue-rates found very galling. Money-lenders, chiefly Marwarrees of foreign extraction, were largely settled in the Bombay Deccan, and took very much the place of the Jews of Eastern Europe. To them the ryots resorted very freely, and for a time their necessities were easily satisfied, for their land was known to be a good security, and the "Mahajans" knew well what they were about. A ryot once in their hands seldom got out of them again; interest was added to interest, and at last the debtor was sold up. The law gave the creditors every facility to seize and sell the debtor's land, and this was largely done. In several of the Bombay districts, in the high plateau country known as the Deccan, this state of things became very aggravated, and led to much discontent. Eventually the ryots, considering themselves aggrieved by the Mahajans, broke out, and serious disturbances occurred, which drew attention to the matter.

A singular change has taken place in our views in the last half-generation. Twenty years ago we believed in the strictest doctrines of political economy, and were ready to push them to any length. It was then proposed to cure all the evils of Ireland by substituting tenure by pure contract for every other kind of tenure, and giving full scope and encouragement to capital and to capitalists, with absolute rights over the cultivators. And so in India there long prevailed the belief that, if the principles of political economy and the courts of law had full play, all must go well. Now there has been a reaction of opinion. As in Ireland, so in India, it has come to be believed that there may be ground for protecting the small and poor man against the laws wielded by the rich. The sympathy of the official classes is now in favour of the ryot, the child whom we too early invested with absolute ownership which he did

not yet know how to use, and who too easily parted with that for which he had paid nothing. Accordingly, much interest having been excited by the case of these Deccan ryots, a committee of inquiry was appointed, and in consequence of their report a law for the relief of indebted ryots was passed in 1879, called the "Deccan Agriculturists Relief Act." By this Act, in certain specified districts, suits for debt, mortgage, &c., against agriculturists are to be tried summarily by special tribunals. The Courts are empowered to go behind the bond, to inquire into the history and equities of the dealings between the parties from the beginning. The account is to be made up on the principle of debiting only money actually received, charging only simple interest at a rate which the Court may deem reasonable (the total interest not to exceed the principal), and crediting payments in the way most favourable to the debtor. The sum due may be ordered to be paid by easy instalments. The debtor is exempt from arrest, and his immovable property cannot be seized or sold unless it is specifically mortgaged for the debt. If the sum decreed does not exceed fifty rupees, and the Court is satisfied that the debtor is unable to pay, it may discharge him. If the debt exceeds fifty rupees, he may be declared insolvent by an easy process, and relieved of his debts, retaining his house and so much land as is required for the support of himself and his family. There is nothing to restrain a man from mortgaging his property in future, but the last-quoted provision seems to contain the germ of an inalienable homestead law, such as is found in all the old constitutions of the United States.

The experience of these and other parts of India seems to show that while on the one hand great evils may result from the rash creation of landlords with absolute rights over the cultivators, on the other hand evils of another sort may follow from the too hasty recognition of complete and unrestrained rights of property in cultivators unaccustomed to such rights in the form in which we know them. When a man has laboriously and thriftily acquired rights he may generally be trusted to guard them, but when they are thrust upon him he often does not learn their value till they are lost—he finds them a means of unaccustomed credit, which he enjoys till he learns too late that he has subjected himself to the loss of all, and that his last state is worse than his first. There is much in this experience to suggest the belief that in dealing with such people it is best

at first to give them rights of a limited character only—say, fixity of tenure at fair rates—to keep them under tutelage for a time, rather than make them uncontrolled masters of the land by which they must live.

RECENT LEGISLATION AND SETTLEMENTS IN NORTHERN INDIA.

I have explained the good footing on which the Bengal ryots of the time of the permanent settlement were put, by the theory at least, of the laws of that day, record and protection only being wanting; but I have scarcely alluded to the ryots who came into land subsequent to the settlement. In truth, till recent legislation dealt with the whole subject, their position was very obscure and doubtful. The Regulations giving the Zemeendars power to deal with the waste land would have enabled them to introduce, in so much of their estates, an English contract system; to have retained the complete and absolute property in their own hands—to have built and improved, and let the improved lands to tenants. But, in fact, they did nothing of the sort. Exactly the same thing happened which has happened in Ireland—that is to say, the Zemeendars and those holding under them permitted ryots to reclaim the land, settle themselves, put up houses, and do all that was required for agricultural purposes, on the understanding that when it was reclaimed they were to pay the usual rents.

There was, however, this material difference from the state of things in Ireland, that no circumstances arose leading the Zemeendars to think of attempting to evict tenants. And the mass of the old tenants not being liable to eviction, those who came in subsequently, on similar customary terms, probably considered that they also were not to be evicted so long as they paid their rents. In course of time, indeed, the distinction between the old and new ryots would necessarily become very difficult to trace; it became hard to say who had held from before the settlement, and who had come in subsequently, the apparent tenure being precisely the same. At any rate, the question of occupancy rights was not raised between the Zemeendars and ryots, both parties being content that things should remain as they were. Under a legal system where the greatest force is given to custom, it was at least doubtful whether it might not be held that, according to the custom and

understanding of the country, any man who occupied land as a resident ryot, and invested his labour and money in it, *ipso facto* acquired a right of occupancy subject to the customary rent.

The old Regulations, in fact, seem hardly to contemplate any other than the ordinary native method of managing these things ; and there are in them expressions which would seem to imply that no more is to be taken from any class of ryots, old or new, than the customary rates of the neighbourhood. Special contracts would probably override these general provisions ; but it is certain that in the whole course of litigation, from 1793 to 1859, there was no case in which any ryot's rent had been raised by the agency of the courts, on any other ground than that it was below the customary rates of the neighbourhood, and should be raised to that standard. The logical inference would be that as there was no mode of raising the general established rates of a locality all round, and individual holdings could not be raised beyond those rates, they must have remained unaltered all along. The fact, however, is not exactly so. Zemeendars, like other native rulers, have a good deal of irregular power ; as prices rose and expenses increased, they had some equitable claim to an increase of rent. Cesses and extra items were added to the rent-roll : then on special occasions new measurements were made, and claims of one kind and another were sometimes compromised by an agreement to add something to the previous rates. Thus in an irregular way, but more or less by mutual consent, the old Pergunnah rates were changed into very various local rates, and the tendency was always towards increase ; there being in this respect little distinction between ancient and modern ryots, except in the case of the formally acknowledged holders of perpetuities at a quit rent. Once the body of the ryots had submitted to any increase, individuals could be made to pay the local rates thus established. Still there was no general system of rapid enhancement, and, as I have already said, the increase of rents did not keep pace with the increased value of the land.

Eventually it was found that the increase of knowledge and of the mercantile spirit were bringing about a state of things when it would be no longer safe to rely on the undefined customs which were daily becoming more varied and indistinct, and that a revision of the Bengal rent laws was necessary. In

the north-west provinces, also, it was felt that the settlement proceedings had left the rights and liabilities of the ryots in a somewhat inaccurate state. And it was determined to pass a new law applicable to both provinces. This was the famous Act X. of 1859, by which, with some slight subsequent amendments, the respective rights of landlords and ryots are still regulated.

The first provisions are applicable to the permanently settled provinces only, and do little more than confirm the rights of the old ryots conferred on them by the original laws. Ryots who had held from the time of the permanent settlement at fixed rates of rent which had never been changed are entitled to hold at those rents for ever. The effect is that those of the ancient ryots who have clung to their rights and submitted to no increase keep them still; but those who have, as matter of fact, submitted to any increase, just or unjust, fall down into a lower class, to be presently mentioned.

Then, to get over the want of record and the difficulty or impossibility of proving an ancient invariable holding, it was provided that when any ryot can prove that his rent has not been changed for twenty years, it shall be presumed that the land has been held at the same rate from the time of the permanent settlement, *unless the Zemeendar shows to the contrary*. This is by no means giving perpetuity to all ryots of twenty years' standing, but is a mere adjustment of the burden of proof. There has been a great disposition to be very strict in the proof required of the twenty years' holding at a fixed rent. It has not been thought enough that some sort of proof should be given, and it should be accepted if uncontradicted by evidence on the other side. Very specific and exact proof has been required, which is not always forthcoming, the provision not having been anticipated, and there being no official record. This deficiency has often been met in native method by forging the receipts which were wanting. The result, I fear, is that it very much depends on the idiosyncrasy of the individual judge, whether claims to hold at a fixed rent are admitted wholesale or rejected wholesale; and there is a painful uncertainty as to every tenure which has not passed the ordeal of the courts.

These, however, are judicial difficulties; the general equity of the law is so far not disputed. The provision which has since led to much discussion, and to a cry that the rights of landlords have been confiscated, is the next, which declares a

right of occupancy at a fair rent (subject to enhancement from time to time) to belong to every ryot who has held land for a period of twelve years and upwards, with two important exceptions. First, the law is not to affect the terms of any written contract, so that a man holding a terminable lease, which reserves a right of re-entry, does not benefit by the provision. And, secondly, it does not apply to the "seer" or demesne lands of the proprietors. Lands which have once borne that character, although let for the time, can be resumed at any time.

Tenants having a right of occupancy are liable to enhancement of rent on the following grounds, and on these only :—

That the land is found by measurement to be in excess of the quantity paid for.

That the rate of rent is below the prevailing rates paid by the same class of ryots for similar lands in the places adjacent.

That the value of the produce or the productive powers of the land have been increased otherwise than by the agency or at the expense of the ryot.

The following incidents of the occupancy tenures are established by law or by judicial decisions. So long as the ryot pays the rent he may do what he likes with the land (provided he does not absolutely destroy it); and may sublet it temporarily. It also descends by inheritance, and there is no actual restriction upon subdivision as regards the rights of the heirs among themselves. But the Zemeendar is not bound to recognise any subdivision; so long as he does not accept separate tenants he is entitled to hold the whole tenure liable for the whole rent, and can sell the tenure or eject the ryots when any part of the rent is in arrear. The question whether the tenures are or are not saleable is left to be determined by the custom of each district or locality.

The right of occupancy having been secured to so large a body of the tenants, there is no provision for compensation for improvements; but an outgoing tenant is entitled to carry away everything which he has placed on the land if he can remove it, and generally either sells or removes the woodwork in his house, and anything else not actually sunk in the soil.

It has been asserted that the twelve years' rule of occupancy is an arbitrary rule, borne out by no native law or custom; and there is some truth in that statement. But then very much was to be said for the still wider rule which would have given

every resident ryot a right of occupancy, as his due under the custom and an implied contract. In fact, the law, as originally drawn for Bengal, gave all resident ryots the right to hold at the prevailing rates. It was, however, pointed out by the authorities of the north-west provinces, that in modern times, since the cessation of the external pressure which in troubled times made every man necessarily reside in a village as a member of a community united for many purposes, the distinction between resident and non-resident ryots could hardly be maintained, and they suggested their own twelve years' rule, which was adopted accordingly, as a compromise of a doubtful question. Be the abstract merits of the occupancy question what they may, the consideration which I think takes away all ground of complaint is that the law declaring the occupancy right of the mass of ryots was passed without any serious opposition on the part of the Zemeendars; it may almost be said, with their tacit consent. Modern Indian laws are not passed as mere edicts; they are published and fully discussed in an open legislative council, the proceedings of which are reported day by day. The Bengallee Zemeendars are a highly educated class, with English newspapers and abundant organs; they are the last people to submit without complaint to any infringement of their rights. But on this occasion they did not complain. It is true that the twelve years' limit was, I believe, put in somewhat hurriedly towards the latter stages of the bill; but then it was, as I have said, substituted for a much wider rule, which had been long published. The fact is, that to native ideas the rule was one to which it did not occur to them to object. Native Zemeendars generally prefer fixed ryots to those who may run away any day.

At the same time that the twelve years' rule was introduced there was also inserted the third of the grounds for enhancement of rent, which I have mentioned—one previously unknown in Bengal, and not practically operative in the north-west provinces—which gave the Zemeendars a right to enhance on the ground of increase in the value of the produce or in the productive powers of the land. That was a great gain to them. In the north-west provinces, where no class of ryots have a right to hold at fixed rents, and the right of occupancy was already secured, the result of this provision is that the Rent Act, taken as a whole, benefits the Zemeendars, and renders the ryots much more subject to enhancement of rent than before. In

Bengal, the settlement in favour of the ryots of a doubtful right of occupancy is counterbalanced by the new rule of enhancement. But the Zemeendars did not show a disposition to press it much ; and so far as the natives, superior and inferior, were concerned, the new law might have worked quietly enough in Bengal. A storm, however, soon after arose from an unexpected quarter.

The oldest and perhaps the most successful European industrial enterprise in India is that of the Bengal indigo planters. They used generally to buy the indigo plant from the ryots, and to manufacture the indigo themselves. For facility of obtaining indigo, they had acquired possession of considerable estates, generally as sub-holders or middlemen, under the Zemeendars. Holding thus towards the ryots a double relation as landlords and merchants, the landlord influence was brought to bear on the cultivation and delivery of the plant. And, as so often happens in India, the matter came to be regulated rather by custom than by proper mercantile principles. The planters did not attempt to make profit by the rents ; the ryots were allowed to sit at the old easy rents ; but they were required to deliver a tale of indigo plant, and the price paid was fixed by custom and not by competition. As was shown when a Commission investigated the matter, the planters had adopted some high-handed ways, in the absence of sufficient Government authority in the interior of Bengal ; but, after all, natives will bear a great deal in that way, so long as they are in the main tolerably well off ; and through the planters much European money circulated among them. It was when the increase of prices of all produce and general rise of values made it apparent that the old customary prices paid for the indigo plant were very unprofitable, that there arose serious discontent, terminating in a sort of rebellion against the indigo planters. The whole matter was inquired into by a Commission, and it was made evident that the old state of things could not continue, and that if the planters wanted indigo, they must pay market value for the plant.

They then said, "We have let you sit at easy rents because you gave us indigo ; but since you object to give indigo on the old terms, we will raise your rents." So far the planters had a good deal of right on their side ; and if they had on the one hand offered a reasonably increased price for the indigo plant, and on the other claimed a reasonable increase of rent, the

matter might probably have been settled. In fact, however, the planters who tried the question did not at first take this moderate course. They rather sought to conquer the ryots, and to bring them to their own terms with respect to indigo, by demanding an extravagant and penal increase of rent. They proposed to treble and quadruple the rents all round at one blow. The case came before the Chief Justice, Sir Barnes Peacock, who decided that the ryots were bound to pay a fair rent in the sense of the highest rent obtainable, and that, an increase of the value of produce being shown, there was no limit to the increase demandable but the net profit of the cultivator or rack-rent. Entering into a calculation of the value of produce and costs of production, and deducting the one from the other, he found that the difference left a profit greater than the rent claimed by the planter, and accordingly decreed the full claim.

The ryots, however, still declined either to grow indigo on the old terms or to pay the rents so greatly increased, and the case eventually came before the full High Court of fifteen judges, who decided by fourteen to one (the Chief Justice still maintaining his opinion) that as the landlord could only enhance for a certain cause, he could only enhance in the same degree, or in the same proportion, in which the cause operated. It being shown that the value of agricultural produce has increased in a certain proportion since the last adjustment of rent, the rent will be increased in the same proportion; e.g., if prices have risen fifty per cent. the rent will also be raised fifty per cent. That is the final decision in what is called the Great Rent Case.

The law, being thus settled, has now been in force upwards of twenty years, and has attained a considerable prescription as the agrarian code of the country. By a long course of litigation doubtful points have been cleared up, and innumerable questions have been adjudicated. It may no doubt be said that the law has been so much overlaid by decisions, that a consolidating Act would be very useful. On the whole it may be considered that in Bengal proper landlords and tenants have fairly held their own against one another, and the benefits of the Act have been pretty much divided. Considerable opportunities of systematic enhancement have been given to the Zemeendars which they had not before, but on the other hand, even without any regular record of rights, the ryots are now

generally alive to their rights, and prepared to assert them. It has not been always found easy to establish grounds sufficient to put in force the third ground of enhancement of rent, increased value of produce; and legitimate enhancement has proceeded but slowly, while illegitimate enhancement has been frequently resisted.

Of late, however, there has been a proposal not only to consolidate but much to alter the law. That proposal arose in this wise:—It was brought to light and clearly ascertained by official inquiry, that without doubt all over the country the Zemeendars were still in the habit of imposing extra cesses in addition to the proper rent—a practice which the conditions of the permanent settlement prohibited under the severest penalties, even to the forfeiture of the estate. In fact, the penalty was so severe that it was difficult to enforce it. There was a good deal of official discussion, but nothing effectual was done. The ryots of some districts of Eastern Bengal, however, attempted to help themselves. They formed great land leagues, to resist what they considered unlawful cesses and irregular enhancements; and when the Zemeendars attempted to press them they retaliated in some cases by refusing to pay any rent at all, and confident in the strength of united action, declared that by forcing the Zemeendars to go to law for every ryot's rent, they would ruin them in the end. Some collisions, both in and out of court, occurred, owing to this state of things; and although, by the aid of the Government officers, the particular cases were settled, the Zemeendars insisted that the law gave them no sufficiently summary means of enforcing undoubted rent claims, and asked for legislation on the subject. Sir Richard Temple, then Lieut.-Governor, so far acknowledged that there were grounds for their claim, as to have a draft Bill submitted for consideration. His successor, Sir Ashley Eden, thinking that the legislation should not be entirely in favour of the Zemeendars, threw in as a makeweight a proposal that the right of free sale should be established by law in favour of all occupancy ryots, thus raising a question which in Bengal had not been a very burning one. A Commission was then appointed to examine the whole question. They thought that the opportunity should be taken to revise and consolidate the rent law, and to introduce improvements into it; and, one step leading to another, they eventually proposed a new law which included some very radical changes. In addition to the objects

already mentioned, they proposed to establish a machinery for adjudicating upon, and giving effect to claims to enhanced rent, and for enabling the Zemeendar, when he found it necessary, to call in the aid of the Government officers to ascertain his rights and record the holdings and liabilities of the ryots. Further, adverting to the absence of knowledge of legal rights and the practice of enforcing them by special contracts by which the twelve-year occupancy rule might be defeated in the future, the Commission proposed to create a new class of occupancy ryots, with more limited rights, comprising all who had been allowed to settle down for three years as resident ryots; and they proposed also to establish a right to compensation for improvements in all cases. Many less important changes were included in a new draft Bill, which they submitted for the consideration of Government. The question still occupies the attention of the local and superior Governments, and no decision seems to have been yet arrived at. There are some who doubt whether the time has come for so much re-opening the settlement arrived at in 1859, unless we are prepared to undertake a general and complete record of rights—a gigantic undertaking, which would absorb all the strength of the official machinery for a long time to come.

The above statements refer only to Bengal proper. The great province of Behar stands on quite a different footing. It has already been mentioned that the people of Behar are a different race from those of Bengal: their language is different, and so are their institutions. Great landlords, keeping undivided estates under a system of primogeniture, continued to exercise a semi-regal power, and there was no creation of perpetual sub-tenures as in Bengal. The cultivators of Behar are not Mahommedans as are those of great part of Bengal, and they have not the cohesion and somewhat democratic spirit which is generally promoted by the puritan forms of Mahomedanism. On the contrary, most of these Behar cultivators are of the lower Hindoo and extra-Hindoo castes, who are a good deal accustomed to subjection to the superior castes; and such men had little power to assert their legal rights against strong superiors. In Behar, too, the practice has generally been to pay rent in kind—a share of the crops, and an unusually heavy share—in recent days half or even more—and that system was far less favourable than one of fixed rents to the maintenance and growth of independent rights.

Probably, then, in Behar, from the first the rights conferred on the ryots by the laws of 1793 were treated with scant respect, and they owed what position they had rather to the custom of the country than to the law. Time and circumstances about to be mentioned have caused the obliteration of the inferior rights of 1793, and it is to be gathered from recent reports that, except in certain districts where some of the land is held by a higher class of cultivators, there scarcely exist in Behar ryots holding at the fixed rates prescribed in 1793.

It might be supposed, however, that the modern ryots would have had the benefit of the occupancy rights settled by the Act of 1859. It turns out that of these, too, they have been in practice wholly deprived, a special cause having occurred to deprive them of all stability of holding in addition to those already mentioned.

Behar is a great indigo country, and especially since the Bengal ryots have successfully rebelled against the forced cultivation of indigo the cultivation of the plant has been much extended in Behar, and has been very profitable. The system is still by no means one of free contract. A planter scarcely ever attempts to grow indigo without first acquiring a position of authority over the ryots. This he does by getting leases of the villages from the Zemeendars. They have always been accustomed to farm their rights to middlemen; the indigo planters, offering higher rents than others, are preferred; and then the ryots have over them not only the power of the Zemeendar, but also that of the strong-handed European, who till a few years ago was above the local law. The practice is that the planter requires the ryots of each village under him to grow a certain quantity of indigo, or to surrender a certain proportion of their lands to the Factory, when the indigo is sown by hired labour or by contract. The plant requires some rotation, and it is probably more in order to vary the cultivation than with any settled plan of destroying occupancy rights that it has been the practice constantly to shift about the lands held by the ryots and the factory respectively.

It had long been known that great abuses existed in connection with this system and that of middlemen-farmers generally. Successive Lieut.-Governors of Bengal have denounced these evils in very strong terms, recording their opinion that "the oppression of the ryots was of the most grinding nature;" that "rack-renting and illegal exactions pre-

ailed to an extreme degree;" that "the tenants have been deprived of all rights, and ground down to a state of extreme depression and misery," so that "the ryots of the richest province of Bengal are the poorest and most wretched class in the country." These last expressions are those of Sir Ashley Eden, the present Lieut.-Governor of Bengal. He desired, however, to proceed by conciliatory methods, and he appointed a mixed Commission, on which both Zemeendars and indigo planters were largely represented, to consider the whole question. As to the extent to which the ryots have been deprived of the rights which the laws of 1793 and 1859 intended for them the report of the Commission leaves no doubt whatever. They say, "An examination of the papers of Behar estates has shown that, while sixty per cent. of the present ryots have held land in the villages in which they reside for more than twelve years, less than one per cent. of them hold at present the same area of land which they held twelve years ago." "It is doubtful whether any one of them could prove their occupancy rights even where these rights exist beyond doubt." The Commissioners were agreed on some remedial measures, on others they differed, and eventually the matter was reconsidered by the Bengal Commission, and the remedies thought most advisable were embodied in the General Draft Bill for the Bengal provinces, of which mention has already been made. The fact remains that at present the ryots of Behar are deprived of all their rights, and either rack-rented in an extreme degree or obliged to grow indigo. Whatever may be done or not done as regards Bengal, a radical remedy is most urgently required in Behar.

Possession of Orissa was not obtained from the Marattas till the early part of the present century, when doubts had arisen about the Bengal policy, and it was not permanently settled. The old ryots were secured by titles held direct from Government, and eventually a regular settlement for thirty years was made, all rights being recorded, and the ryots put under hereditary farmers, who were not called Zemeendars, but "Suberakars," or managers. The system, however, was contrary to the non-interference views of the Bengal administration; the record of holdings and payments was discontinued; the Suberakars came more and more to be treated as landowners, and the ryots as ordinary tenants. Subsequent inquiry has disclosed that here, too, the rights of the ryots have been very

much broken down, and that they have been subjected to many illegal exactions and deprivations.

In Assam, though so long attached to Bengal, the system is purely ryotwar. Attempts have once or twice been made to introduce Zemeendars, but it was found impossible. The grants of waste land to tea-planters will be noticed later.

In connection with recent alarms, it may be well to mention the wilder districts attached to Bengal, where great agrarian and social difficulties have resulted from a little carelessness a hundred years ago. At that time these districts were not explored or known beyond this, that they were inhabited by savage aboriginal tribes who had occasional communication with the plains, sometimes (and more frequently) hostile, sometimes peaceful, and who occasionally paid some sort of tribute or dues on the produce which they brought for sale. They were very troublesome to manage; and to get rid of the trouble of dealing with them, the Government threw in whatever was to be got from them with the estates of the neighbouring Zemeendars, who were generally bound to watch the ghats or passes of the hills by which the caterans were in the habit of entering the plains. As time passed we brought these people under subjection and civilising influences; but no sooner was this done than the Zemeendars, besides being practically relieved from the watch and ward for which allowance had been made in settling the revenue, claimed to be proprietors of the hill country, and to treat the aboriginal cultivators as their tenants. So far was this carried, that when the Garos on the north-east of Bengal, who had maintained their independence against Hindoo and Mahomedan alike, were at last brought under control, the neighbouring Zemeendars produced titles giving them any dues got out of the Garos when they came down to the skirts of the hills, and on the strength of the indefiniteness of these titles claimed the whole Garo country—a claim which was only settled by legislation and compensation.

On the west of Bengal the aboriginal country under British dominion is much more extensive and accessible, and there is a large population of aboriginal tribes—Sontals and others—a simple, hardworking, pleasant people, very amenable, as it turns out, to Christian and civilising influences. But then, the whole of this country is found to belong to Hindoo Zemeendars under old British titles such as I have described. With all their

simplicity, the aborigines are an excitable people, with strong ideas of their own, and a strong disposition to assert what they consider to be their rights. They say: "The Government we know; but who are these—these Hindoos whom you have set to rule over us and rack-rent us?" Those of them who have accepted Christianity appeal to the doctrine of the equality of man and the duty of protecting the poor against the rich which they find in the New Testament, and they taunt us with failure to practise the doctrines which we profess. Altogether, the result is that these people have repeatedly broken out into wild rebellions, which have only been suppressed with great difficulty and after much bloodshed. Some special laws have been passed for their protection, and a good deal has been done to introduce a paternal sort of administration; but we never can be quite sure of them while they have the feeling of injustice which the existence of Zemeendars causes in them, and even now the Sontals have been causing great alarm.

The thirty years' settlement of the north-western provinces having expired, a new settlement has been made for another thirty years. It was determined to follow, in all new settlements, a more moderate rule of assessment than in former days. Instead of taking two-thirds of the rent, the Government now takes only half of the rents, leaving the other half to the landholder for his expenses and profits, besides future increase. There are several cesses for roads, schools, &c., to be paid out of the landholder's portion; but still the profit left to him is very large. The increase of rental since the last settlement being counterbalanced by the lower rate of assessment, the Government has not profited by the revision so largely as it might have.

At one time there was a reaction of opinion in favour of permanent settlement of the land revenue, and orders were sent out by the Secretary of State that in every estate where the land might be considered to be sufficiently cultivated (the proportion of untilled land not being in excess of that required for grazing and other reasonable purposes), the assessment should be declared to be perpetual.

It is evident, however, that a permanent assessment on the basis of half present assets is a much more liberal arrangement than any hitherto made; and that as the land revenue forms in India so large a proportion of the total revenue of the country, if it is stereotyped we must seek for other sources of income.

There is much reason to suppose that the value of money and of produce are rapidly altering, and that great changes may occur. An opinion has also sprung up that the resources of the country are as yet insufficiently developed, and that it is for the Government, as superior landlord, to do much in the way of irrigation works, and similar improvements, about which there will be difficulty if it is debarred from increase of land revenue. Hence there was again some change of feeling. Orders were issued that where there was a probability of irrigation works being undertaken we were not to commit ourselves to permanency of the land revenue; and in practice we have not done so at all.

It is to be noted that the last orders for permanent settlements in the north-western provinces contained no provisions for extending the benefit of permanency to the inferior class possessed of acknowledged rights in the land (the old occupancy ryots), such as were contained in Lord Cornwallis's Regulations, and are repeated (as regards the old permanently settled provinces) in Act. X. of 1859. As matters now stand they would still remain subject to constant increase of rent.

The first settlements in the Punjab were made for shorter terms than those adopted in older provinces, and a revised settlement became necessary. The proceedings led to one of those lamentable official battles which so much interfere with progress.

I have mentioned that the normal tenure of the Punjab is that under which the same persons, as members of village communities, are proprietors and cultivators at the same time. Still there are also in parts a good many non-cultivating landholders of the same classes as those of the north-west provinces, and many cultivators holding under them. The distinction between hereditary or occupancy ryots and tenants-at-will had certainly been very loosely made in the first settlements (as was also the case in the north-west provinces), there being little or no contest at a time when the distinction between revenue and rent rates was hardly known to the people; and the landholders were sometimes ready enough to let others share the burden of the fixed money revenue then for the first time imposed on them. Some settlement officers had followed the old north-west practice of considering all who had held for twelve years to have a right of occupancy; but the more correct rule afterwards laid down by Sir J. Lawrence was "to

consider the nature quite as much as the length of occupancy, and to pay entire regard to local customs and the opinions of the agriculturists." In the original settlement very large numbers of inferior holders were recorded as having right of occupancy.

Act X. of 1859 had never been extended to the Punjab, so that its provisions did not settle the matter.

Soon after the commencement of the new settlement operations the officer at the head of the department represented that the old settlement was very frequently wrong in attributing occupancy rights to mere tenants-at-will; that many of these men themselves admitted this to be so; and he asked if he might re-open the matter and correct the erroneous entries.

Beyond an order enjoining on him extreme caution, no definite instructions were issued. Unhappily this question of the rights of the cultivators was then the subject of hot controversy in several parts of India, and the dispute was taken up by opposing parties among the Punjab officials. The highest authorities differed, and nothing was settled.

Meantime the settlement commissioner, being himself very strongly of the party which denied the rights of ryots, went on in his own way, and very many thousands of the occupancy ryots of the old settlement were put down as tenants-at-will under the new settlement.

An independent chief court had meantime been established in the Punjab, and some of the proceedings of the settlement commissioner coming before the court were declared to be not warranted by law. All parties were then agreed as to the necessity of legislation of some sort. After much discussion a new Land Act was passed for the Punjab, the provisions of which, as regards the disputed point, are these:—

Every person entered in the records of settlements previously completed and sanctioned, as having a right of occupancy, shall be presumed to have such right, unless it shall be proved by suit brought by the landlord—

1. That he has admitted before a settlement officer that he has no such right; or,
2. That within thirty years tenants of the same class, in the same or adjacent villages, have ordinarily been ejected at the will of the landlord.

During recent years much attention has been paid to the land affairs of new provinces, which I shall separately notice.

THE LAND QUESTION IN OUDE.

The partition of the Oude territory at the beginning of the century has been mentioned. The division, in a plain country with no natural boundaries, was purely political. The people of the country left to the Nawab-Vizier were almost absolutely identical with those of the districts taken by the British, in race, language, and institutions, being Hindoostanees of the regular Hindoostance type.

The first use made by the Nawab of the power which a strong British contingent gave him was to bring to complete obedience the subjects who were left to him, and to put down most of the Jagheerdars and Talookdars. But under his successors, the interference of British forces in their internal affairs being no longer permitted, a very different state of things grew up. A great degree of anarchy prevailed; local chiefs constantly set the Government at defiance, and from the death of Nawab Saadat Allee to the time of the annexation of Oude, these men acquired more and more power. This is the period of the rise of the modern Talookdars. Some of them are members of old leading families, and a few of these are in some sense chiefs of clans; many others are mere modern revenue collectors or contractors who have obtained a hold over the districts entrusted to them. In all cases the power has gone to the strongest or most astute in each family, not to the man who had the most legitimate claims by seniority.

Take as an example the family of the most prominent leader of the Talookdars, known to the English public as "chief of the barons of Oude," Maharajah Sir Man Sing, K.S.I. They are not Oude men at all. The uncle of the present Maharajah, a native of the old British province of Bahar, and a Bramin by caste, was a trooper in one of the Company's regiments of regular cavalry. Being quartered at Lucknow, he entered the Oude service, and rose to high office. He introduced his brother, the father of the Maharajah. Up to the time of annexation the family rose higher and higher in the Oude administration, and acquired a great estate. The eldest son had held great places, but was notorious for having almost ruined by tyranny the districts beyond the Gogra, and was prudently kept in the background under British rule. Another son was a man of literary tastes, who did not care for politics; and the family was represented by the youngest son, the above-

mentioned Maharajah, an extremely clever person, thoroughly versed in political affairs.

I have no doubt that the example of the British districts by which they were surrounded had much to do with the disposition shown by the Talookdars to acquire, by fair means or foul, not only the rule over, but something like proprietary right in, as many villages as possible. Certain it is that a continual process of absorption of the independent villages into the Talookas, and suppression of those men who would have been considered village proprietors under the north-west system, went on up to the time of annexation; so that at last the greater part of Oude was held by the great Talookdars, corresponding to the Zemeendars of Bengal.

Not only were the Talookdars constantly in arms against the Government, but the Talookas were also torn by intestine feuds. If we look to the succession of the great chiefships, we shall generally find that the ruler for the time had murdered his uncle and supplanted his cousins, and that the cousins or cousins' sons formed an opposition, ready to supplant him on the first opportunity. The *outs* constantly harassed the *ins* by predatory attacks. When I was magistrate of a British border district, I had repeated remonstrances, through the British resident, regarding the atrocities of a man who was represented as a common robber and dacoit of the vilest description, sheltered by British subjects; and after some blood had been spilt in an attempt of my police to capture him, I was quietly told that I need not trouble myself any longer, as he had made terms with his Government, and was installed as Talookdar.

The ryots, too, were often almost necessarily involved on the side of one faction or other, and were plundered and oppressed when the opposite faction triumphed. The British border was sometimes full of them. Yet they seemed seldom to care to settle there; they only encamped, and were generally ready to return on a favourable opportunity. The fact is that the system had its compensations for them; the exercise of despotic power by the superior implies the possession of the sacred right of rebellion by the inferior; and if they were ill-used by one man they generally soon found the means of paying him off by adhering to some opposition chief; so that either party would at last make some sort of terms with them.

The general result, however, of the state of anarchy which prevailed was that all tenures and all rights had been very

much shaken and shuffled in the generation preceding our rule; and under a nominal Government at Lucknow the country was in a great degree held by semi-independent Talookdars, rather tributary than subject.

Both the official reports and the Anglo-Indian newspapers were constantly full of the tyrannies and oppressions of the Talookdars. Colonel Sleeman, the British resident, made an official tour through the country, and wrote a book full of their misdeeds. It was solely and wholly on the ground of the inability of the native Government to control them and protect the people that, in the year 1856, under orders issued contrary to the opinion of Lord Dalhousie, we dethroned the representative of the family who had been our oldest allies, and for a hundred years thoroughly faithful to us, and annexed the country.

Under these circumstances it is scarcely surprising that the first orders issued on the annexation gave somewhat scant consideration to the Talookdars, who had caused all the mischief. They amounted in brief to this: that our officers should deal primarily with the village communities, leaving the Talookdars to prove their right to superior tenures, if they had any.

In practice, however, these orders could not be fully carried out. The Talookdars had too complete a hold of much of their possessions to leave it possible to ignore them altogether. Many of their more recent acquisitions were taken from them and restored to village proprietors; but they still remained possessed of great estates, and had not been deprived of their forts, guns, and followers, when the mutiny broke out, in the year immediately following the annexation. Oude was, as is well known, one of the chief scenes of the mutiny. It was almost exclusively held by Sepoy troops, very many of whom were natives of the country; and when they rose the small British force was besieged in the Residency. The Talookdars did not behave excessively ill. Some of them assisted our fugitive officers to escape, and for a time they generally temporised, and did not take a very decided part. From the time, however, when the attempted relief by Havelock and Outram failed, and the relievers were shut up along with the original besieged, the great body of the Talookdars identified themselves with the Sepoy cause, went into full rebellion, and took part in the siege of the Residency.

As soon as the military strength of the rebellion was

completely broken, Lord Canning came out with his famous proclamation, confiscating all the lands of Oude. As there has been so much discussion on this subject, I may state that, being then in immediate communication with Lord Canning, he showed me the original draft of the proclamation in his own handwriting, and I then had it from his own lips (before the proclamation was published) that his object was not really to confiscate finally the rights of the Talookdars, but to get rid of all the engagements into which we had entered after annexation, and to obtain a "tabula rasa" which would enable him to restore the great landowners, and redress the injustice which he thought they had suffered, on condition of their full and complete allegiance. In fact, the step was taken in pursuance of a policy the opposite of that which had before prevailed, and in order to clear the ground for the new system.

The advice which I ventured to tender to Lord Canning was, that it would be better to avoid the appearance of extreme severity on the one hand, and the extreme of concession to those who had rebelled on the other; that it would be enough to assure the Talookdars that bygones should be bygones—that their property and reasonable claims should be respected—that the whole question of landed rights should be again gone into, and that any injustice of which they could fairly complain should be redressed. But the Governor-General had taken his course. The proclamation was accordingly issued, and the Talookdars were immediately informed that on their submission they should have re-grants of all that they had held before the annexation. They were at first very suspicious and incredulous about the extreme goodness of the terms offered; but they had no choice but to come in or go off to the hills as fugitives; they almost all came in, and received English grants of all the villages which they had in any shape or in any way brought under their dominion before the annexation of the country.

Thus Lord Canning did in Oude precisely what Queen Elizabeth did in Ireland, when the surrender of the Irish chiefs was accepted and their possessions were re-granted on English titles.

Soon after the pacification of the country, a revenue settlement was undertaken, and then there arose the question whether any inferior rights were to be recognised in subordination to those of the Talookdars, just as the same question

arose when a settlement of Ireland was made under James I. The advocates of the extreme landlord theory at first said that the confiscation swept away everything, and that the Talookdars had now complete and absolute titles, to the exclusion of every one else. But it was shown that Lord Canning had reserved subordinate rights, proved to have been in active existence at the time of annexation, and any such which can be made out are maintained.

Views unfavourable to rights of ryots were then held by many, and Sir Barnes Peacock's decision in favour of the landlord had just come out. As respects the ryots, then, it was at first said that the old hereditary ryots had a bare right of occupancy, but that there was no limit to the rent which might be demanded, save the highest rack-rent of the day. A little later, the Chief Commissioner declared that he had been misled by the prejudices of his education in the north-west provinces, and that, correcting himself, he now said that there was no such thing as a right of occupancy; he therefore directed that no distinction should be made in the records between tenants-at-will and any other class of ryots, except in case of leases under voluntary contract.

Of these orders the Governor-General, Sir John Lawrence, disapproved, and there was a special inquiry on the subject.

It turned out that most of the ryots did not care to claim fixity of tenure. Even the grant of proprietary rights under our system, accompanied by fixed burdens punctually exacted, is scarcely ever appreciated in the earliest years of our rule; and perhaps, seeing how often the first possessors of such dangerous rights have been sold out and reduced far below their original position, the natives are not so far wrong as we suppose. It is, then, hardly surprising that most of the Oude ryots, who had so long looked on the free right of rebelling and running away as their best safeguard, did not much like anything which seemed to bind them down, and wholly rejected the leases which it was sometimes attempted to thrust upon them. There was also no standard of law and right; and though the ryots said that a Talookdar ought not to turn them out, when asked whether he formerly had the power to do so, they said, "Of course he had—the man in power could do anything." The general result of the inquiry was that neither the ryots proved a right to stay in, nor did the Talookdars prove a right to turn them out; but the Talookdars being taken as

prima facie owners under the grants, and the onus of proof being thrown upon the ryots, it may be said that the ryots generally failed of the proof necessary to give them any legal status. All depends on the way the burden of proof is put.

Eventually a compromise was effected, under which a comparatively small number of the highest class of ryots, the descendants of old proprietors and dominant families, have been admitted to a right of occupancy at rates (to be fixed from time to time) slightly below the full rack-rents of the day, while all the other ryots become tenants-at-will.

Thus the Oude Talookdars are much more complete owners of the soil than any superior landholders in any other province—ininitely more so than those of Bengal ever were.

Since the Oude inquiry it has been said that the result conclusively proves the whole system of ryots' rights hitherto obtaining in so many provinces to have been a mistake—that ryots' rights are a fiction of the British imagination, and that the less they are fostered the better.

It may, I think, be admitted that wherever the strong communities of the Punjab type are not found, if the burden of proving a legal title be thrown wholly on the ryots, in countries where there are no laws, and before custom has had time to crystallise into shape under British rule, most of them would fail to prove any titles. Even putting out of view the disturbance of all titles in Oude in the half-century between our annexation of the first half and that of the second half of the territory, I believe that if, in the first years of our rule, the ryots of the districts of the north-west provinces had been subjected to the same ordeal as the Oude ryots, the result would not have been very different. But it by no means follows, that when landed rights are to be created or enlarged, it may not be equitable to give some share of that which is to be given to the ryots; or that, if time be allowed before the question is raised, it will not be found that native feeling and custom have given them a position which ought to be recognised. It may be, in fact, that without any formal declaration they would crystallise into copyholders, as did English villeins.

The Oude system has certainly not been a success. The Talookdars were taken under the special protection of the authorities: they had every assistance and every advantage. English newspapers were started as their organs, as many virtues were attributed to them as formerly were vices, and

they were encouraged to assert their rights of ownership to the uttermost. But we nowhere hear of any of them making good landlords after the English model. A few may be pretty good after a native pattern; most are bad from that point of view also. So far from improving the country as capitalist landlords, it has been necessary for Government to come to the assistance of the aristocratic system by lending the Talookdars money to stave off their creditors and protecting them from legal procedure. They have made free use of the power to raise rents and evict: notices of ejectment have been annually served by tens of thousands. Sub-proprietors and ryots have attempted to resist, and a war of classes has prematurely arisen, involving questions which elsewhere have not been reached in several generations. Under the title of "The Garden of India," Mr. Irvine, a civil servant lately employed in Oude, has published a very interesting book, which gives a painful and graphic description of the state of things in the province which he thinks nature intended to be the garden of India, and those who wish for further details will find them in that book.

THE CENTRAL PROVINCES.

Till a comparatively recent period, the British territories in India were completely separated from one another, the mass of native States in the centre dividing them into very unequal portions. The great sub-Himalayan plain, running upwards of fifteen hundred miles from the Bay of Bengal to the Afghan hills, contains one hundred and twenty-five millions of British subjects, and comprises the administrations of Bengal, the north-west provinces with Oude, and the Punjab. Madras occupies the south of the Peninsula, with over thirty millions of inhabitants, and Bombay, the west, with sixteen millions. The annexation of the Nagpore territories, in the very centre of India, and the assignment to British use of the Nizam's Berar territory, gave us a link uniting the different British provinces; and taking a little here and a little there, the Central provinces were formed.

The oldest portion of these provinces is what was called the Saugor and Nerbudda territory, a large country on either side of the Nerbudda, and extending from Bundelcund and the north-west provinces on one side, to the Nagpore limits on the other. This territory, taken from the Marattas in the last great

Maratta war, but not in population a Maratta country, had been long under a separate commissioner, but was for a time attached to the north-west provinces. Then there was the Nagpore territory, principally occupied by a Maratta-speaking population. And there were thrown in, on the west, some minor districts adjoining the Bombay territory, on the east some outlying districts of Bengal, the district of the upper Godavery transferred from Madras, and the great wild semi-independent territory between the Godavery and the Bengal frontiers.

Contrasts of administration heretofore veiled by distance have been brought into prominence by this arrangement of a territory uniting all the others. The Bombay officers, who had been unable to see any trace of proprietary rights, above those of the ryots, in the lands of Candeish and similar districts, looked with wonder on a system which, in adjacent villages, inhabited by the same races, under the same native institutions, found or created proprietors of a higher degree; and so in other cases. In respect of land tenure the system of the central provinces is now in some sense intermediate. The Saugor and Nerbudda territories contained some trace of the north-west form of village proprietary, and something of more southern institutions. The system followed had been to acknowledge no proprietary rights, but to farm out the villages for terms to farmers, who were as much as possible selected from the local headmen or from persons having local claims and influence. The holdings of the farmers were allowed to descend in the semi-hereditary manner of Indian offices, a good and efficient member of a deceased farmer's family being put in his place; and it was understood that good farmers would have a renewal of lease on resettlement. Still, property not being admitted, the Civil Courts could not interfere. Private transfers were occasionally sanctioned; but if a man broke down, the tenure was not sold; the Government officer selected some other good man to put in his place; and the subdivision of interest in the farms, or other dealings with them in a way which might be prejudicial to efficient management, or dangerous to the security of the revenue, were not permitted.

The rents to be paid by the ryots were adjusted by the Government officers, and the farmers had no power to raise them or to turn out the ryots, although they benefited by the increase of cultivation during the terms of their leases.

This system had its advantages. The ryots were com-

pletely protected, and the Government officers were able to secure efficient men in the grade between themselves and the ryots, instead of being subject to the inconveniences resulting from the introduction of inefficient or grasping men, and divided, limited, or complicated tenures, by the action of the laws of inheritance and the Civil Courts; while at the same time a confidence in the regular and considerate action of the Government as superior landlord gave a substantial security of tenure, which was an incitement to improvement in the native fashion. The result was that the north-west authorities found the villages in possession of semi-hereditary farmers, a few of whom were really of the same class who had been recognised as village proprietors in the north-west; while many more, with no original claims to the character of proprietors, had old hereditary connection with the villages; and a good many, owing to failures and changes, were farmers of more recent introduction.

The north-west authorities, in pursuance of the ideas prevailing in that part of India, considered that full property must be established; but in consideration of the peculiar circumstances of this territory, and the exceptionally favourable position which had been enjoyed by the ryots for upwards of forty years, a compromise was made in the orders issued for a regular settlement.

The rules to be followed were these:—Wherever a real proprietary right could be shown by any of the persons hitherto called farmers, they were to be recognised as proprietors, and the ryots were to be treated exactly as in the north-west provinces. But in other cases the old hereditary ryots were to be maintained in their former position, being treated as a sort of sub-proprietors of their holdings, subject to rent-rates somewhat in excess of revenue rates, which could not be altered during the term of settlement; while the farmers were made village proprietors with the right of collecting from the ryots, and having as their profit both the difference between the rent-rates of the old ryots and the revenue-rates, and all that they could make by raising the rent of recent ryots, and promoting the cultivation of the waste lands attached to the village areas.

It may be mentioned, too, that in this settlement a compromise has been made between the northern system of including all waste in the settled areas, and the Madras-

Bombay system of charging additional revenue for all waste brought into cultivation. There is a great excess of uncultivated land in all this country. Liberal areas of waste have been assigned to each village, and included in the settlement, so as to give room for the extension of the cultivation, and by way of compromise of indefinite claims to grazing, wood, and water; while all beyond these areas has been reserved as Government property to be afterwards dealt with. The best forest lands are preserved for the growth and supply of timber.

It was found that in none of the districts received from different quarters had the Government made pledges which precluded the adoption of a similar system; and the rules above mentioned as originally laid down for the Nerbudda territories were applied to the whole of the central provinces, some sort of proprietors being everywhere established.

In the Maratta country, where there were no real proprietors, an energetic Potal or other headman was generally invested with that character in each village. Subsequently, however, it was shown that much injustice was done, under this arrangement, to many of the ryots, among whom the new landlords had hitherto been no more than *primus inter pares*. And, as time passes, it turns out that, whereas the existing headman was not improbably a person of some energy and power, who had been selected or had selected himself on a sort of principle of natural selection, his successor, not so selected, but succeeding by legal hereditary claim, was more likely than not wanting in all the qualities of his father, and not unfrequently remarkable for bad qualities, or absence of qualities. In such cases we have all the disadvantages of the landlord system, with none of the advantages. Measures have been taken to remedy the injustice to the ryots and to give them some special protection in the districts where it is shown to be needed; but on the whole the result of the Central Provinces Administration seems to have been to strain facts a good deal in order to introduce a proprietary tenure above that of the ryots.

SUMMARY OF TENURES.

The present distribution of tenures in the different provinces may then be stated to be (speaking generally) as follows:—

Oude being at one extreme with an aristocratic system, which gives the land to nobles and financiers; Madras and Bombay at the other, with a system which gives the land to the people.

Oude.—Great Zemeendars, almost complete owners, with few subordinate rights.

North-west Provinces.—Moderate proprietors; the old ryots have fixity of tenure at a fair rent.

Punjab.—Very small and very numerous peasant proprietors; old ryots have also a measure of fixity of tenure at fair rent.

Bengal.—Great Zemeendars, whose rights are limited. Numerous sub-proprietors of several grades under them. Ancient ryots who have both fixity of tenure and fixity of rent. Other old ryots who have fixity of tenure at fair rent variable from time to time.

Central Provinces.—Moderate proprietors. Ancient ryots who are sub-proprietors of their holdings at fixed rents for the term of each settlement. Other old ryots have fixity of tenure at a fair rent.

Madras and Bombay.—The ryots are generally complete proprietors of the soil, subject only to payment of revenue.

GRANTS OF WASTE LANDS IN FEE-SIMPLE.

An account of Indian land tenures would not be complete without noticing the system of granting waste lands in fee-simple at a low price, which was adopted to meet the views of European planters.

There was formerly a liberal system of clearance leases under which jungle tracts were freely given to enterprising individuals, on condition of clearance; nothing being paid the first few years—then very light rates—and finally, ordinary revenue rates. It is necessary to guard against abuses such as taking large tracts on speculation and doing nothing, but with due precautions the system generally answers very well, and in dealing with natives and native products, is probably the best that can be adopted.

But when there seemed to be a prospect that some of the tracts of country and ranges of hills, hitherto almost waste, might be turned to account for the cultivation of new and valuable products introduced by Europeans, and possibly might

be made to some degree the seats of European colonies, it was thought that these objects were sufficient to outweigh the remote prospect of deriving any considerable land revenue from such lands; and it was deemed that a fee-simple tenure cheaply accessible would be more suitable to European settlers, and more agreeable to them than conditional grants, the terms of which it might be difficult to enforce. It was, therefore, decided that all the uncultivated and unassessed lands in the Himalayas, in the tea districts of Assam and Cachar, in the coffee districts of the Neilgherries and the south-western ghats, in Central India, and elsewhere, should be offered to all who chose to take them at a low upset price, ranging from two shillings an acre in most districts to sixpence an acre in some parts of Central India.

The original orders were loosely drawn, and left a door to some abuse. Most of the waste land in India has been waste because, owing to inaccessibility, want of population, or unhealthiness, it has hitherto been unprofitable to cultivate it. But there were a few valuable small tracts in the settled country, or in the immediate neighbourhood of Hill Stations, which were rather untilled than waste, having been reserved for grazing, or firewood, or because nothing had been settled as to the disposal of the land. The original orders contained a proviso that when there were more than two applicants for the same land, it should be put up to auction; but some of the local authorities seem to have considered that such applications must be made at the identically same time, and that once an application had been received, the door might be shut to all others. Hence, in some few instances, easily accessible lands were given to the first comers at the upset price, when they would have fetched many times that price in an open market. Lord Halifax, therefore, ordered that all land applied for should be put up to the highest bidder at or above the upset price, and some lands, given away without compliance with the terms of the original rules, were resumed and sold for much larger prices.

Notwithstanding these orders, the facilities offered were so great as to lead to a good deal of land-jobbing. There was then a great cry for the encouragement of enterprise, and low as was the upset price, purchasers were sometimes allowed to take possession on payment of a small percentage. In some instances great tracts which the purchaser had never seen were

secured on a mere deposit of a nominal sum towards the expenses of the measurement, the object being either to get into the way in order to be paid for getting out of it, or to take the chance of getting up a company before the day of payment came. A worse abuse came to light in several instances where tracts containing an aboriginal population with a considerable cultivation were sold as waste, and made over in fee-simple to the purchasers, merely because there was no record of the rights of the ancient inhabitants. It was necessary to revise the grants in such cases, and in the ups-and-downs of tea-planting and company-mongering much land was at one time or another thrown back on the hands of the Government by those who were unable to fulfil the terms of purchase. On the whole, however, the tea-planting industry has thriven and taken root, and is now a very extensive interest. Of late years it has been thought that there being no longer need of an excessive stimulus to settlement at the expense of the future revenue, it is better to go back to an arrangement nearer the old clearance system—land being given for a long period on easy terms, but made subject to land-revenue hereafter. On the whole, I do not think that it can be fairly said that the Indian Government has failed to offer the waste lands to European settlers on sufficiently favourable terms.

V.

THE LAND SYSTEM OF FRANCE.

BY T. E. CLIFFE LESLIE.

THE object of this essay is to describe the Land System of France in respect of the distribution of landed property in that country, with the rural organisation in which it results, and to examine its causes and effects. In considering its causes, laws and customs relating to property (including succession and transfer), and to tenure, of necessity form prominent objects of inquiry; but their operation is so bound up with that of economical causes and conditions, that we should miss in place of obtaining clearness by separating what may be termed the legal from the economical class of subjects of discussion. It ought, too, to be premised that although political causes, in that narrow sense of the word which relates merely to the constitution and action of the State, do not fall within the scope of the present essay, yet the fact of their existence ought not to be altogether ignored. There are such causes, and their disturbing influence is powerful. A striking illustration of the potency of this class of causes is afforded in the fact that M. Léonce de Lavergne, in his celebrated work on the "Rural Economy of Great Britain," refers the progress of English agriculture during the last two hundred years, in the main, directly or indirectly, to political institutions, political liberty, and political tranquillity. The influences and effects of the French land system cannot then be fairly estimated without taking into consideration matters excluded by the non-political character of these pages. On the other hand, it will be pertinent and material to their purpose to show that much which is commonly ascribed in this country to political causes (in that wider sense which comprehends all the institutions of a country,

especially those relating to property in land), as the chief agencies regulating the division of the soil in France, and the modes of its cultivation, are in reality traceable to the natural play of economic forces, aided, indeed, by the law of France, but not the part of it supposed.

The contrast between the land systems of France and England, two neighbouring countries at the head of civilisation, may, without exaggeration, be called the most extraordinary spectacle which European society offers for study to political and social philosophy. Official statistics in France,* on the other hand (following an enumeration of 1851, now in arrear of the actual numbers), reckon no less than 7,845,724 "proprietors," including the owners of house property in towns—a number which may be assumed to denote the existence of eight million such proprietors now. Of these, according to the computation of M. de Lavergne, about five millions are "rural proprietors," of whom nearly four millions are actual cultivators of the soil. The official tables themselves return no fewer than 3,799,759 landowners as cultivators, of whom 57,639 are represented as cultivating by means of head-labourers or stewards, as against 3,740,793 cultivating their land *de leurs mains*. This last figure is again subdivided into 1,754,934 landowners cultivating only their own land; 852,934 who, in addition to their own, farm land belonging to others as tenants; and 1,134,190 who work also as labourers for hire. But these figures, as already remarked, are now in arrear; and we may accept as a close approximation to the actual situation the following estimate by M. de Lavergne:—"Of our five millions of small rural proprietors, three millions possess on the average but a hectare† a-piece. Two millions possess on the average six hectares. . . . Two million independent rural proprietors, a million tenant-farmers or métayers, and two million farmers and servants themselves, as well as the million farmers, for the most part proprietors of land; such is approximately the composition of our rural population."‡

It would hardly diminish the contrast of such statistics to our own, were we to adopt the figure which M. de Lavergne has introduced into his "Rural Economy of Great Britain," on the

* "Statistique de la France. Agriculture, 1868" (Résultats Généraux de l'Enquête Décennale de 1862).

† Not quite two acres and a half.

‡ "Economie Rurale de la France," last Edition.

authority of a statement made by an unofficial member of the House of Commons during a debate—a figure which has often since been reproduced in England on the authority of M. de Lavergne himself—namely, that there are 250,000 owners of land in this country; although it ought to be noticed that there is reason to believe an error respecting the meaning of the technical term “freeholders” was involved in this calculation, and, moreover, that it includes a number of suburban freeholds, and by consequence an urban, not a rural class of proprietors, far less actual cultivators of land of their own.

Four millions of landowners cultivating the soil of a territory only one-third larger than Great Britain, may probably appear to minds familiar only with the idea of great estates and large farms almost a *reductio ad absurdum* of the land system of the French. Those, on the other hand, who have studied the condition of the French cultivators not merely in books, but in their own country, and who have witnessed the improvements which have taken place in it and in their cultivation year after year, will probably regard the number with a feeling of satisfaction. One thing, at least, is established by it, that property in land is in France a national possession; that the territory of the nation belongs to the nation, and that no national revolution can take place for the destruction of private property.

But the inquiry proper to the present pages leads us to examine, in the first place, the causes of so wide a distribution of landed property in France, and, secondly, its economic rather than its political effects. Its economic effects will prove on examination to be in fact its principal cause. The notion commonly entertained in England appears, however, to be that, originating in the confiscations of the French Revolution, the subdivision of the soil has been not only perpetuated but increased in a geometrical progression by the law of succession established by the Code Napoléon. That it did not originate with the Revolution, and that an immense number of peasant properties existed in France long prior to 1789, is indeed well known to all students of French social history; and those who have not concerned themselves with that side of history will find the fact fully substantiated in the introduction to M. de Lavergne’s “*Economie Rurale de la France*.” The point which calls for notice here is that, centuries before the Revolution of 1789, one of the causes of the subdivision of land in France (one which we shall find to be the chief cause in

our own time) was its acquisition by purchase in small parcels by the French peasantry.

"I have in my hands," says M. Monny de Mornay, in his general report on the results of the *Enquête Agricole*, "contracts of purchase by peasants of parcels of land of less than twenty *ares* (that is to say, less than half an acre) commencing prior to the close of the sixteenth century." It was not the lack of landed property that left the peasantry of France in destitution, and drove them to furious vengeance two hundred years later; it was the deprivation of its use by atrocious misgovernment, and the confiscation of its fruits by merciless taxation and feudal oppression. But in England, also, the numbers of small landholders at the close of the sixteenth century was still very large, though it had once been much larger; even at the date of the French Revolution it was considerable; and in 1815 (at which date it is calculated that there were 3,805,000 landowners in France), it was, although it had steadily declined, a more significant figure than it is now. In France, on the contrary, the number has increased to about four millions engaged in the actual cultivation of the soil, in addition to nearly a million other small rural proprietors, who are the owners, at least, of a cottage. We are not here engaged to inquire into the causes of the diminution, the disappearance, one may say, of small landowners in England; but the contrast between the movement which has been steadily adding to the number in France and that which has extirpated them in England adds interest to an investigation of the nature and causes of the French agrarian economy. The results of such an investigation can hardly fail, moreover, to throw an indirect light upon the agrarian economy of England.

As already observed, the French law of succession, which limits the parental power of testamentary disposition over property to a part equal to one child's share, and divides the remainder among the children equally, is the cause commonly assigned in England for the continuous subdivision of land in France. And of an incontestable mischief in the operation of the French law, as regards the subdivision of separate parcels, there will be occasion to take notice hereafter. But a point of much greater importance is, that the real effects of the French law of succession cannot be understood without taking into account a process of subdivision taking place in

France from a different cause, one really indeed traceable in part to the structure of French law, but not the law of succession—namely, continual purchases on the part of the peasantry of small estates or parcels of land. On this subject notaries in many different parts of France have given the writer surprising information in recent years; and it has indeed for many years been a subject of such common remark in the country, that even mere railway passengers through it can hardly have failed to have come upon evidence of it. M. Monny de Mornay states with respect to it, in the chapter of his report on the division of land: “The fact which manifests itself most forcibly is the profound and continuous alteration in the distribution of the soil among the different classes of the population. In the greater number of departments the estates of 100 hectares might now be easily counted; and taken altogether they form but an insignificant part of the national territory. The proportion cannot be stated in figures, because it varies from one department to another; one must confine oneself to saying that the west and south have preserved more large estates than the north and east.” The north and east, he might have added, are the wealthiest and best-cultivated zones, though the south is now rapidly improving in cultivation and wealth, and, as will presently be shown, the process of subdivision keeps step with this improvement. After referring to the disappearance of estates of even moderate size, M. de Mornay proceeds: “All that has been lost to the domain of large estates, all that is lost day by day to that of estates of middle size, small property swallows up. Not only does the small proprietor round his little property year by year, but at his side the class of agricultural labourers has been enriched by the rise of wages, and accedes to landed property in its turn. In the greater number of departments 75 per cent. at least of them are now become owners of land. Peasant property thus embraces a great part of the soil, and that part increases incessantly. The price of parcels of land, accordingly, which are within reach of the industry and thrift of the peasant, increases at a remarkable rate. The competition of buyers is active, and sales in small lots take place on excellent terms for the seller, when the interval has been sufficient to allow fresh savings to re-accumulate.” This is in some degree an official statement, and official statements in France are sometimes suspected of exaggerating the prosperity of the

nation at large ; but it is confirmed by a superabundance of unofficial and unquestionable authority not on the side of Imperial Government. In one of several passages to the same effect, in his "Economie Rurale de la France," and other works, M. Léonce de Lavergne, for instance, says : "The small proprietors of land, who, according to M. Rubichon, were about three millions and a half in 1815, are at this day much more numerous ; they have gained ground, and one cannot but rejoice at it, for they have won it by their industry." And in a communication* to the present writer, M. de Lavergne observes : "The best cultivation in France on the whole is that of the peasant proprietors, and the subdivision of the soil makes perpetual progress. Progress in both respects was indeed retarded for a succession of years after 1848 by political causes, but it has brilliantly resumed its course of late years. All round the town in which I write to you (Toulouse) it is again a profitable operation to buy land in order to re-sell it in small lots. . . . I have just spent a fortnight near Beziers. You could not believe what wealth the cultivation of the vine has spread through that country, and the peasantry have gotten no small share of it. The market price of land has quadrupled in ten years. But for the duty on property changing hands (*Pimpot des mutations*), and the still heavier burden of the conscription, the prosperity of the rural population of France would be great. It advances in spite of everything, in consequence of the high prices of agricultural produce."

Along with the subdivision of landed property thus taking place, there is also, as we shall see, a movement in the land market towards the enlargement of peasant properties, the consolidation of small parcels, and even in some places towards the acquisition of what in France are considered as large estates ; as, in like manner, contemporaneously with the subdivision of farms, and the more minute cultivation of the soil, there is also a counter-process of enlargement of little farms, and in some places even a development of *la grande culture* on a splendid scale. But let us inquire first, what are the causes, economic and legal, of the continual subdivision by purchase of the soil in France? The reader will bear in mind with respect to it, that it is by no means a mere subdivision of existing peasant properties ; that small properties are gaining

* November 6, 1869.

ground in the literal sense, and increasing the breadth of their total territory as well as their total number. And the continuous acquisitions of land by purchase on the part of the French peasantry and labouring classes can be palpably shown to be a perfectly natural and beneficial movement; one proceeding, in the first place, from the natural tendencies of rural economy, from the mutual interest of buyers and sellers, from the growing prosperity and development of France, as its agriculture improves, as it is opened up by railways, roads, internal and foreign trade, manufactures, and mines, and as both country and town become wealthier; proceeding again, in the second place, from, or at least promoted by, a sound and natural legal system; facilitating dealings with land as the interests, inclinations, happiness, in a word, the good of the community direct.

One obvious consideration presents itself foremost, though too much stress must not be laid on it, that France has aptitudes of soil and climate for several kinds of agricultural produce—the vine, for example—for which *la petite culture*, in the form of manual cultivation (a form to which we shall see hereafter that *la petite culture* is by no means confined), is almost exclusively appropriate. Too much stress must not be laid on this fact, as just said; for the amount of cultivated territory under such kinds of produce does not amount to one-fifteenth of the whole; but it is a fact worth mentioning, on one hand as an indication, so far as it goes, of the chimerical nature of notions prevalent in England, even among excellent farmers, of the ruinous consequences to agriculture of the subdivision of the French soil, and on another hand as presenting a particular example of a general fact of immense importance in the inquiry; namely, that the class of productions for which *la petite culture* is eminently adapted (whether exclusively, or in common with the large system of farming) is one for which the demand steadily increases with the growth of wealth, trade, and agriculture, and the prosperity of the inhabitants of both town and country, including the small cultivators themselves.

M. Léonce de Lavergne, in his "Rural Economy of Great Britain," after remarking—and the remark is in itself one of no small importance and instructive suggestion—that "Capital being more distributed in France than it is in England, it is expedient that the farms should be smaller, to correspond with the working capital," proceeds: "The extent of farms, besides,

is determined by other causes, such as the nature of the soil, the climate, and the kinds of crops prevailing. Almost everywhere the soil of France may be made to respond to the labour of man, and almost everywhere it is for the advantage of the community that manual labour should be actively bestowed upon it. Let us suppose ourselves in the rich plains of Flanders, or on the banks of the Rhine, the Garonne, the Charente, or the Rhone; we there meet with *la petite culture*, but it is rich and productive. Every method for increasing the fruitfulness of the soil, and making the most of labour, is there known and practised, even among the smallest farmers. Notwithstanding the active properties of the soil, the people are constantly renewing and adding to its fertility by means of quantities of manure, collected at great cost; the breed of animals is superior, and the harvests magnificent. In one district we find maize and wheat; in another, tobacco, flax, rape, and madder; then again, the vine, olive, plum, and mulberry, which, to yield their abundant treasures, require a people of laborious habits. Is it not also to small farming that we owe most of the market-garden produce raised at such great expenditure around Paris?" And further on (notwithstanding the favour which, in his love for political liberty and order, M. de Lavergne regards everything in the economy of England) he observes: "Our agriculture may find in England useful examples; but I am far from giving them as models for imitation. The south of France, for example, has scarcely anything to borrow from English methods; its agricultural future is nevertheless magnificent." This passage was written sixteen years ago; and a communication to the writer cited above shows how the predictions it contains respecting the south of France, and the great future before *la petite culture*, are now being realised under the eyes of its author. But it is not in the southern half alone of France that the peasant cultivator finds a perpetually growing demand for all the most remunerative kinds of his produce. The "Enquête Agricole," for instance, shows a great increase in the cultivation of the vine in the east, the west, and the centre, as well as the south; while in the north—where the vine is, on the contrary, giving way before the competition of the plant of more favoured skies—the demand for the produce of the market-gardens, the dairy, and the orchard, afford more than a compensation. It deserves, moreover, passing remark that the little gardens and

orchards round the cottages of the peasantry form, by reason of their careful and generous cultivation, the greater portion of the class of land which in French agricultural statistics obtains the denomination of *Terrains de qualité supérieure*. For dairy-husbandry, *la petite culture*, with its minute and assiduous attention, has such eminent aptitude, that even with respect to England, M. de Lavergne remarks: "Although everything tends to proscribe small farming—though it has no support, as in France, from a small proprietary and a great distribution of capital—though the prevailing agricultural theories and systems of farming are opposed to it, yet it persists in some places, and everything leads to the belief that it will maintain its ground. The manufacture of cheese, for example, which is quite a domestic industry, is well adapted to it." He adds, what is not to be left out of account, for it is not an account merely of pounds, shillings, and pence: "There is nothing so delightful as the interior of these humble cottages; so clean and orderly, the very air about them breathes peace, industry, and happiness; and it is pleasing to think that they are not likely to be done away with."*

The raising and fattening of cattle for the market is another great department of husbandry which *la petite culture* has almost to itself in France; yet it must be confessed that it is—though a marked improvement is visible—not as yet generally carried on with the same skill as in Flanders; and the art of house feeding, which is the basis of the Flemish system of small farming, is still in its infancy in many French districts: a fact, however, which only opens a brighter future for *la petite culture* within them. And we may *à fortiori*—by reason on the one hand of the hold small farming has already established over both the territory and the mind of France, and, on the other hand, of the more recent development of manufactures, means of communication, and commerce—apply the language which Mr. Caird has used with respect to England: "The production of vegetables and fresh meat, forage, and pasture for dairy cattle, will necessarily extend as the towns become more numerous and more populous. The facilities of communication must increase this tendency. An increasingly dense manufacturing population is yearly extending the circle within which the production of fresh food, animal, vegetable, and forage, will be needed for the daily and weekly supply of

* "Rural Economy of Great Britain."

the inhabitants and their cattle ; and which, both on account of its bulk and the necessity of having it fresh, cannot be brought from distant countries. Fresh meat, milk, butter, vegetables, &c., are articles of this description ; and there is a good prospect of flax becoming an article in excessive demand, and therefore worthy of the farmer's attention. Now all these products require the employment of considerable labour, very minute care, skill, and attention, and a larger acreable application of capital than is requisite for the production of corn. This will inevitably lead to the gradual diminution of the largest farms, and the gradual concentration of the capital and attention of the farmer on a smaller space." * Thus the very productions for which *la petite culture* is specially adapted are the things getting new markets with every new railway, road, manufacture, mine, and increase of national wealth ; and that ascent of rural prices in France which M. Victor Bonnet has shown to be the result of its economic development is in effect an ascent in the economic scale of peasant property and the little farm. It follows that the subdivision of the French soil, which has been the subject of sincere regret and pity on the part of many eminent English writers and speakers, as well as of much ignorant contempt on the part of prejudiced politicians, is really both a cause and an effect of the increased wealth of every class of the population—the seller and the buyer of land, the landowner, the farmer, and the labourer, the country and the town. Instead of being, as has been supposed, a cause of low wages, it has been a consequence of high wages, which have enabled the labourer to become a land-buyer—and even a cause of high wages by diminishing the competition in the labour market, and placing the labourer in a position of some independence in making his bargains with employers. Instead of diminishing agricultural capital, as many English agriculturists urge, it is, in the language of Adam Smith, both cause and effect of "the frugality and good conduct, the uniform, constant, and uninterrupted effort of every man to better his own condition, from which public as well as private opulence is derived, and which is frequently powerful enough to maintain the natural tendency of things towards improvement, in spite both of the extravagance of Government and the greatest errors of administration."

But, assuming it to be demonstrable that the subdivision

* Caird's "English Agriculture."

of land in France is in the main the result of natural and beneficial economic causes, it is certain, nevertheless, that it could not take place without the co-operation of legal causes, that is to say, of a legal system which renders dealings in land simple and safe, and, by comparison with the English system, inexpensive. In the absence of natural economic tendencies towards the subdivision of land by its purchase in small lots, the best-constructed legal system of transfer would only tend to its accumulation in few hands ; but, on the other hand, under such a legal system as our own, whatever the natural tendencies of the market, the expense, difficulty, and risk of buying very small estates would make them an altogether unsuitable and impracticable investment for the savings of the peasant and the labourer. Even under a law of succession like the French, there could be no such poor man's land market in England ; the properties partitioned by inheritance would be rapidly added to the domain of the great landowner and the millionaire, able to run the risk of litigation and to procure the best legal assistance. In France, every sale and every mortgage of land is immediately inscribed in a public registry in the *chef-lieu* of the *arrondissement* ; and any one has a right to enter and inspect the register, to satisfy himself respecting the title to any estate or parcel of land, and the charges, if any, upon it. The director of the registry is, moreover, bound to deliver for a trifling charge a statement of the title to every estate or parcel to any one demanding it. The private charges for the assistance of the notary in effecting a purchase vary indeed considerably, and are very much heavier in proportion on very small parcels than on large estates. Every sale of land is moreover burdened with the much-complained-of duty of above 6 per cent. But the transaction is simple, expeditious, and secure ; and the fact that, in spite of heavier relative cost, high taxation, and the competition of public loans and other investments, the peasant is the great buyer of land in France, only strengthens the conclusion that the subdivision of land by the purchase of small estates is a natural and healthy tendency of the market, springing from the high profits of *la petite culture*, and at the same time from the happiness and independence which the possession of land is found by the experience of the people at large to confer. It shows, too, the error of a common impression in England, that it is much better for a cultivator to rent a larger farm than

* 6f. 5c, per 100 f., inclusive of the *Décime de guerre*.

to farm a small estate of his own. If there be any truth in English political economy, the buyers of land in France are the best judges of their own interests; and we have the practical testimony of the whole nation that the small estate is the better investment of the two for capital and labour. But, moreover, under a sound system of title, and of registration of mortgages, the peasant proprietor is not debarred from increasing the size of his farm; he can raise money expeditiously and safely on his own little property, and farm adjoining land as a tenant, should he find it to his advantage. The French land system gives the small buyer of land the benefit of being able to raise capital on unexceptionable security, and that by a process which creates no impediment to its subsequent sale. And such a system, so far from tending to increase the encumbrances on land, tends necessarily, in the first place, to bring land into the hands of those who can make most of it, and secondly, to enable them to develop its resources by additional capital, and thereby to liberate it from any charges upon it.

The amount of debt on the peasant properties of France has been enormously exaggerated. M. de Lavergne estimates it at 5 per cent. on an average on their total value; and the marked improvement in the food, clothing, lodging, and appearance of the whole rural population is of itself unmistakable evidence that they are not an impoverished class, but, on the contrary, one rapidly rising in the economic and social scale. M. de Lavergne himself arrived at the conclusion that the great estates of England were more heavily encumbered, acre for acre, than the peasant properties of France; and Mr. Caird concludes his description of English agriculture thus: "There is one great barrier to improvement which the present state of agriculture must force on the attention of legislature—the great extent to which landed property is encumbered. In every county where we found an estate more than usually neglected, the reason assigned was the inability of the proprietor to make improvements on account of his encumbrances. We have not data by which to estimate with accuracy the proportion of land in each county in this position, but our information satisfies us that it is much greater than is generally supposed. Even where estates are not hopelessly embarrassed, landlords are often pinched by debt, which they could clear off if they were enabled to sell a portion, or if that portion could be sold without the difficulties and expense which must now be submitted to. If

it were possible to render the transfer of land nearly as cheap and easy as that of stock in the funds, the value of English property would be greatly increased. It would simplify every transaction both with landlord and tenant. Those only who could afford to perform the duties of landlords would then find it prudent to hold that position. Capitalists would be induced to purchase unimproved properties for the purpose of improving them and selling them at a profit. A measure which would not only permit the sale of encumbered estates, but facilitate and simplify the transfer of land, would be more beneficial to the owners and occupiers of land, and to the labourers in this country, than any connected with agriculture that has yet engaged the attention of legislature." Such a measure the owners, occupiers, and labourers of France have long had the benefit of; and the fact that in spite of new opportunities of migration and of steadily-rising wages, even the labourer in France is a great land-buyer, proves the profitableness of *la petite culture*, as well as the wealth of the very humblest and poorest class of the French peasantry. Imagine the English agricultural labourers great buyers of land, and at the same time lending no small sums to the State! One ought, too, to bear in mind, at the same time, the different histories of the two countries, and the condition in which the tyranny, misgovernment, and wars of preceding centuries had left the rural population of France half a century ago, not to speak of later political disasters. Far from objecting to the subdivision of land which has resulted from the legal facilities for its transfer and mortgage, the highest French authorities are urgent for the removal of the obstacles created by the high duties on both sales and successions. "Instead of placing obstacles in the way of changes of ownership (*mutations**), the true policy would be to encourage them. In addition to the direct taxation on land (*l'impôt foncier*), landed property is subject to the much heavier burden on changes of ownership. The value of immovable property annually sold may be estimated at £80,000,000; that which changes hands by succession at £60,000,000; the duties charged upon both amounting to £8,000,000. Such taxation is contrary to every principle, falling as it does on capital and not on revenue."† We are not here concerned with the policy

* The term *mutations* is applied to all changes of ownership, whether by purchase or inheritance.

† "Economie Rurale de la France," par M de Lavergne.

of duties on succession; but there is one incontrovertible injustice in their incidence in France which deserves notice—namely, that the successor pays duty on the entire value of the property, without any deduction for encumbrances, so that it sometimes happens that he actually pays more than the full value of his inheritance. This monstrous system of valuation offers, of course, a great obstacle to raising capital for the improvement of land; while it adds not a little to the encumbrances already upon it; the sort of encumbrances added (sums borrowed to liquidate the duties) being moreover entirely unproductive to the owners.

There are, then, two causes of the subdivision of land in the structure of French law—the law of transfer and the law of succession. But the fact that the subdivision promoted by one of these—the law of transfer—is in perfect accordance with the interests of all parties concerned, and the natural tendencies of agriculture in a country of growing wealth suggests a very important conclusion respecting the other—namely, the law of succession. It enables us to perceive why this latter does not produce the practical mischiefs many English writers, not unnaturally, have assumed. The fact is, that (except as regards its operation upon separate parcels, where the property consists of such—a mischief easily cured in the opinion of the highest French authorities) the French law of succession tends in the main to the same result as the natural course of agriculture and free trade in land—namely, the subdivision of land. Secondly, the operation of a good law of transfer tends to cure whatever mischiefs really arise from the partitions effected by the law of succession, there being a steady flow of small lots through the land market towards those who can turn them to the best account. Lastly, it is established beyond dispute that peasant property arrests an excessive partition of land among children by imposing a check upon population. “The law of succession,” observes M. de Lavergne, “is still the object of some attacks, which do not succeed in shaking it. It cannot be said of a country which contains 50,000 properties of more than 200 hectares that the soil is subdivided to excess. It is enough to read the advertisement columns of the daily papers to see that lands of several hundred, and even several thousand, hectares are still numerous. There are even too many of them, in the sense that the majority of the owners would be gainers

by dividing them.”* Of smaller properties, again, of only six hectares on the average (of which he reckons two millions), the same authority adds: “The owners of these live in real comfort. Their properties are divided by inheritance; but many of them are continually purchasing, and on the whole they tend more to rise than to fall in the scale of wealth.” In place of suggesting a radical change in the law of inheritance, he, like most French economists, suggests only a modification of it in the case of a number of separate parcels, together with a great reduction of the duty on their exchange, which at present is the same as on a sale. Rational opponents in England of the French law of partition (that is to say, those who are in favour of a greater liberty of bequest, as distinguished from those who defend our own barbarous system of primogeniture and entail) ought to take into account that the French law of succession really effects, in the main, the very results which the testamentary powers they advocate would produce; as is evident from the fact that the vast majority of French parents do not exercise the limited power they already possess over a part equal to one child’s share. But the main point is that already adverted to—that a good law of transfer corrects a defective law of inheritance. Not only is there a continual enlargement of little peasant properties by the purchase of adjoining plots, as well as a continual accession to the number of small plots through the natural play of the market; but there is even a natural flow of large capitals toward the land. Hence M. Monny de Mornay remarks that, notwithstanding the great diminution of the total domain of large property, and the perpetual increase in the number of little estates through the purchases of the peasantry and the labouring class, there has been for some years a current of ideas and taste on the part of unemployed men of fortune, and of capitalists enriched by the trade of towns, towards investment in landed property.† The truth is that large and small property compete on much fairer and more natural terms in France than in England, and large buyers of land as well as small, in the former country, are free from burdens on the pursuit of their interests and happiness with which both are loaded in the latter.

It follows in natural sequence that large and small farms—*la grande* and *la petite culture*—like *la grande* and *la petite*

* “Economie Rurale de la France.”

† “Enquête Agricole.”

propriété, really compete on fairer terms in France than in England ; and the former and not the latter is the place to see them on their trial, and to judge of the natural tendencies of rural economy in respect of each. The fact is that, while *la petite culture* is gaining ground and growing more prosperous as well as more perfect and more minute, large farming too has made great progress in France. Not only is there a great domain, within which *la petite culture* has exclusive or special advantages, but there is a common domain, for example, in the production of cattle, cereals, and roots, where both may co-exist and prosper ; and there is, again, a domain within which *la grande culture* has its own superior advantages. There were no less than 154,167 farms in France of 100 acres—a number not far short of the total number of farms in England—at the date to which the latest agricultural statistics go back. There were, again, 2,489 steam threshing-machines in 1862, as against 1,537 in 1852 ; and it is natural to infer that the chief employment of these was on the larger farms. In the production of sheep, again, *la petite culture* has not shown itself successful in France ; though it is proper to remark that the decline of sheep between 1852 and 1862 is attributed by the highest authorities, in the main, not to the subdivision of the soil (the decline in their number being a new phenomenon and subdivision an old one), but to a number of wet seasons followed by disease, to a contraction of the area of sheep-walks by the reclamation of waste land and the division of commons ; to an extension of the surface under wheat ; and to an improvement in quality as distinguished from quantity. Nevertheless, it appears certain that minute farming under French methods does not give sheep an adequate range, and tends to other productions. Again, both in Belgium and in France the cultivation of the sugar beet, in combination with sugar factories, is found to tend to *la grande culture*, and no finer, larger farms are to be seen in Scotland than many in France, of which beet is the principal produce.

In the departments immediately surrounding Paris large farming is to be seen in the highest perfection, of which the reader who has not visited them will find a description in M. de Lavergne's "Economie Rurale de la France." Yet, after noticing several magnificent examples, he adds : " While *la grande culture* marches here in the steps of English cultivation, *la petite* develops itself by its side, and surpasses it in results." The truth is, as we have said, that the large and the

small farming compete on fair terms in France, which they are not allowed to do in England ; and the latter has, to begin with, a large and ever-increasing domain within which it can defy the competition of the former. The large farmer's steam-engine cannot enter the vineyard, the orchard, or the garden. The steep mountain is inaccessible to him, when the small farmer can clothe it with vineyards ; and the deep glen is too circumscribed for him. In the fertile alluvial valley like that of the Loire, *the garden of France*, his cultivation is not sufficiently minute to make the most of such precious ground, and the little cultivator outbids him, and drives him from the garden ; while, on the other hand, he is ruined by attempts to reclaim intractable wastes which his small rival converts into *terrains de qualité supérieure*. Even when mechanical art seems to summon the most potent forces of nature to the large farmer's assistance, the peasant contrives in the end to procure the same allies by association, or individual enterprise finds it profitable to come to his aid. It is a striking instance of the tendency of *la petite culture* to avail itself of mechanical power, that agricultural statistics show a larger number of reaping and mowing machines in the Bas Rhin, where *la petite culture* is carried to the utmost, than in any other department. Explorers of the rural districts of France cannot fail to have remarked that *la petite culture* has created in recent years two new subsidiary industries, in the machine-maker on the one hand, and the *entrepreneur* on the other, who hires out the machine ; and one is now constantly met even in small towns and villages, old-fashioned and stagnant-looking in other respects, with the apparition and noise of machines, of which the large farmer himself has not long been possessed. Admitting, therefore, fully an important truth in Mr. Wren Hoskyns' remark, that "The machine doctrine of 'most produce by least labour' is, as applied to the soil, the doctrine of starvation to the labourer and dispossession to the small proprietor ; and instead of belonging to the advance of knowledge, is a retrogression towards the time when a knight's fee included a whole wapentake, or hundred, and a count was territorial lord over a county :"—regarding with Mr. Wren Hoskyns, machinery as made for man, not man for machinery, and the happiness and prosperity of a large rural population as the true object of

* "Land in England, Land in Ireland, and Land in Other Lands." By Chandos Wren Hoskyns, M. P.

agriculture and land systems, we see no reason to believe that the progress of machinery is incompatible with the persistence of *la petite culture*, still less with that of *la petite propriété*, in France.

But if large and small farming compete on fairer terms in France, as elsewhere on the Continent, than in England, and their relative position is accordingly very different, it ought to be added that it is only in the hands of proprietors that either *la grande* or *la petite culture* is fairly tried in France. It is not in the part of the French land system against which English criticism has been directed—the part which differs from the English, namely, the subdivision of landed property and peasant-proprietorship—that its weak point really lies ; it is, on the contrary, in the part which resembles the English—the system of tenure. The British Islands are far from being the only country in which the question of tenure demands and indeed engages the earnest attention of statesmen and economists ; though on the Continent the problem of tenure finds more than half its solution in the system of proprietorship. In France there are two kinds of tenure—namely (1), by lease, usually for three, six, or nine years (a lease for even eighteen years being quite the exception) ; and (2) *métayage*, according to which the proprietor and the *métayer* divide the produce, the capital being furnished by the one or the other in proportions varying in different localities. It seems to be supposed by many writers that the *métayer*, if he has only half the motive to exertion which may be supposed to influence a tenant who has the whole of the produce subject to a fixed rent, enjoys at least the advantage of permanence of tenure. But such is far from being the case in France ; very commonly the contract of *métayage* is but for one, two, or three years. The truth is, the system of short tenures common throughout most of Western Europe has a common barbarous origin. It belongs to a state of agriculture which took no thought of a distant future, and involved no lengthened outlay, and which gave the land frequent rest in fallow ; and it belongs to a state of commerce in which sales of land were rare, changes of proprietorship equally so, and ideas of making the most of landed property commercially non-existent. It is right to observe, however, that in many parts of France, although the stated period of tenure is commonly short, the farm really remains commonly

in the same family from father to son, from generation to generation, provided only the rent is paid. Now, indeed, with greatly rising prices of agricultural produce, there is a steady and general augmentation of rents; and complaint is much oftener made by tenants of the rise of rents than of the shortness of leases; first, because the tenant is seldom turned out if he farms at all decently and lives in moderation, as he usually does; and secondly, because the tenant has very often already some land of his own, has almost always, if no land, some money saved to buy it. He is not, therefore, in apprehension of being turned out naked on the world; on the contrary, he would sometimes hesitate to accept a long lease, having in view setting up altogether for himself as a proprietor. Again, although no legal customs of tenure for unexhausted improvements remain in France, where the Code has swept away all customary laws, yet compensation for some unexhausted improvements exists under the Code. In the case of manure, for example, laid on by the outgoing tenant, he gets compensation, calculated in proportion to the time during which its unexhausted forces ought to yield profit. Again, where the farming is a joint concern between proprietor and tenant, under the form of cattle-lease called *cheptel*, if the value of the joint property has been increased by the tenant, he is entitled, at the expiration of the lease, to half the additional value. For improvements, however, in the nature of drainage and irrigation no right of compensation of any kind exists; and the absence of it furnishes in part the explanation of destructive droughts even in the best-cultivated parts of France. Under peasant proprietorship, in parts both of Germany and France itself, the most perfect system of irrigation may be found. Peasant proprietorship, coupled with, and in a great measure caused by, a good system of land transfer, is in truth the great redeeming feature of Continental land systems, which in point of tenure are as defective as our own. A good law of transfer corrects, as we have seen, a defective law of succession, and it also goes far to remedy defective laws and customs of tenure. It is, moreover, peasant proprietorship alone that prevents the questions of both tenure and landed property from assuming the formidable shape on the Continent which they do already in Ireland, and will do ere long in England. The "Report of the *Enquête Agricole*" suggests additional powers of lease in the case of husbands owning in right of their wives, and of

guardians, and, again, a reduction of the duty on leases, with, moreover, a legal presumption of a lease for twelve years in the absence of a written one. But such measures would give about as much satisfaction, and go as far towards allaying agrarian discontent in France as they would in Ireland, were there not a large diffusion of landed proprietorship, and a facility for both tenants and labourers of passing from that status to the status of proprietor, or of combining both.

It is fortunate for France not only that peasant proprietorship already exists on a great scale, but that the tendency of the economic progress of the country, as already shown, is to substitute more and more cultivation by tenants, and to give more and more to those who remain tenants or labourers the position and sentiments also of proprietors. The increasing demand for and rising prices of the produce of *la petite culture* make it more and more a profitable investment of the peasant's savings and labour; and those very rising prices, and the rising wages, which also follow the development of the resources of the country, put both the small tenant and the labourer in a condition to become buyers in the land market. All improvements in the law of property, and in fiscal legislation respecting it, will tend in the same direction, since the costs attending changes of ownership and exchanges of land fall heavier on small than on large properties. All the highest agronomic authorities in France, instead of objecting to the increasing subdivision of landed property, are urgent for the removal of all legal impediments to its division, as well as those which lay disproportionate cost on its acquisition in small portions, as in those which retain it in common ownership.

The question of common ownership is one which ought not to be entirely ignored in a sketch of the French land system, however brief, although but a very few words can be devoted to it here. Upwards of four million and a half hectares of land in France belong in common to various bodies, corporations, communes, and villages. Of this area it is true that a considerable part is in forest, managed by the State, much of which it would be inexpedient to divide and deforest. But the remainder is in great part almost lost to the country. In a review of the "Reports of the *Enquête Agricole*," at the end of last year, M. de Lavergne pronounced that an effective law for the division and sale of the common

lands would do more for the increase of the agricultural wealth of France than all other administrative measures taken together; for in addition to the cultivation of land, now almost waste, that would follow, the communes themselves would obtain funds by the sale for the making of country roads, in which the southern half of France, especially, is for the most part lamentably deficient. An Act was actually passed in 1860, to facilitate the division of the common lands, but it has produced but little effect. An impediment to the division of the village commons in France, which has come under the writer's observation, arises from a kind of departure of the beneficial from the legal ownership. An entire commune, made up of several villages having each its common land, is the body whose authority is requisite for a division. It may be the interest of the villagers, and their wish, to divide their own common among themselves, but the rest of the commune would often prefer to see the villager driven or induced to bring his own land, with the communal rights attached, into the land market, where they themselves might become buyers. They are not desirous of giving the villagers an additional inducement to stay where they are. If land existed in such ample abundance that every peasant could have a sufficiency of land of his own to make a comfortable subsistence, or could at least have the advantage and comfort of a cottage and garden, the joint possession by each village of an additional common domain might be regarded as a great benefit; but such is not the situation of matters in Western Europe. Nevertheless the French communal lands, even as they are, give the French peasantry an advantage which the British peasant has been deprived of; and they also provide a fund for the future augmentation of the possessions of the French peasantry, to which there is nothing now corresponding in England.

It is not, however, the object of the present writer to compare the land system of France to that of Great Britain. Those who institute such a comparison will remember that it would be in a great measure imperfect and even delusive if confined to a survey of the present state of agriculture and of the peasantry of France—forward already as is the former, happy as is the latter, in many parts of that country. The history of the two countries, the comparative state of their agriculture and peasantry a hundred years ago, as well as now, must be taken into account. France has had only three-

quarters of a century of anything like liberty, and less than half a century of tranquillity and industrial life. Nor in any such comparison should the respective effects of the land systems of the two countries on the town as well as on the country be overlooked. Whoever reflects what the French rural population would be, on the one hand, under a land system like that of Ireland, or even England, and what its town population would be, on the other, if instead of being a third it were more than a half of the whole nation, and if instead of having a political counterpoise in the country it found there only greater political ferment and discontent than its own, must surely pronounce that the land system of France is not only the salvation of that country itself, but one of the principal securities for the tranquillity and economic progress of Europe.

VI.]

THE RUSSIAN AGRARIAN LEGISLATION OF 1861.

BY THE LATE JULIUS FAUCHER, OF BERLIN,

Member of the House of Deputies of the Prussian Landtag.

THE bondage of agricultural labour, taken off from the Russian people by the legislation of 1861, was of comparatively recent origin. It is true that, already at the dawn of recorded Russian history, we meet with the existence of slaves of the czar as well as of the nobles of his court, but these slaves were prisoners of war and their offspring, the personal property of their masters, and quite different from the peasantry, which formed the bulk of the Russian people. The noblemen who owned those slaves were themselves *no* landed proprietors in their own right, nor even vassals owing allegiance for the tenure of land, but servants of the crown, whom the crown had to feed. This, not as a rule, but often, was managed in the form of an allotment to them of crown land, to be tilled by their slaves, either for a number of years or for life; or, but rarely, with revocable permission to leave the fruit of it to their descendants. Such nobles as did *not* own slaves were sometimes paid by the czar's abandoning to them the yield of the taxes due to the czar by the peasantry of one or more villages. But such an arrangement did not legally impair in the slightest degree the liberty of these peasants. They remained the free children of the czar, entitled legally to break off their household, and to separate from their village community whenever they liked, and to join another. The yield of the taxes of the place, not that of so many distinct persons, was given in lieu of a salary.

The Russian peasants of those times were nobody's servants but the czar's, like everybody else in the empire. Nor is it for tracing the origin of the bondage, now destroyed, that it is necessary to refer to the more remote parts of Russian history.

There are other things to be understood concerning Russian village life before a judgment on the probable practical bearing of the Act of 1861 can be formed. The free village of old has to furnish the key to the future of the free village of to-day.

The division of the Russian people into Great Russians and Little Russians signifies far more than a mere split of the language into two dialects, which, by the way, differ but little from each other. Let us state at once the salient point. Little Russia, with Kiew for its centre, is the mother-country; and Great Russia, with Moscow for its centre, is the *colony*, the one great colony whose limits are not yet fixed. Little Russia is Slavonic, pure; the Great Russians are a mixed race, a majority being Slavonians, undoubtedly, and who, more by dint of high culture than by the sword, were the conquerors, with a minority of the former inhabitants of the country, the Finnic tribes or Tchudes. And now the consequence of it, on which we intend to lay stress! The colony, which afterwards became the dominant part of the empire (*colonisation never being completed*—that is to say, never yet having occupied the whole disposable soil) did not yet find time to undergo such changes in the form of the tenure and the tillage of land as have occurred in other places where originally the same form prevailed as that which the Great Russians continued to preserve while constantly applying it anew, as colonists, on virgin soil.

It may be stated at once, that this form was that of the joint husbandry of a whole village. The village, not the family, was the social unit. Supplanting the family for purposes of colonisation, the village, by necessity, partook to a certain extent of the character of a family. It stood under patriarchal rule. Movable property alone was individual, immovable; the land, at least, was common. With the alien not belonging to the village, not the individual, the village only had to do. The village always had a mother-village, and the mother-village again had a mother-village, and so on. The name of mother-village in general, or of mother-village to another district village, is still attached to many Russian towns and villages; but even where the tradition of it is now lost, it may be taken for granted that such a relation once existed. Nor are the most recent times void of examples of the foundation of a daughter-village by a mother-village, though the interference of the masters, which the Russian villagers in the meantime had got, had given to the colonising movement a somewhat different

shape. The colonising masters sometimes made up the new villages of selected families from a whole number of older villages in the same master's possession. But whenever this has taken place, it was done in disregard of the traditional feelings of the people. Though the Russian peasants by no means cling to the soil which has given birth to them, they cling to their fellow-villagers. They would not have aggregated voluntarily from different villages to form a new village. And they like to have even the mere traditional remembrance of a common mother-village, as children, who are still children, like to have still a mother. I have been witness (in the Government of Moscow, in the summer of 1867) to the fact that a whole village, which had been destroyed by one of the numerous conflagrations of that year, and which had lost everything; whose inhabitants, besides, not feeling at ease where they were, resolved to return to the mother-village of their village, situated two hundred and fifty miles off, and which they, or rather their ancestors, had left nearly fifty years ago. They collected money for this purpose from the neighbouring gentry; and even the neighbouring villages, which fully appreciated the resolution, contributed their share.

This colonisation by whole villages giving birth to other villages, and sending them off and planting them often at a very great distance, was necessitated by the difficulties colonisation had to encounter in those tracts and in those times. When the Slavonian colonisation in a north-easterly direction (which was the work of a people already settled, not nomads, as is sometimes conjectured) commenced, the Russians as yet had no government worth the name which could protect the advanced posts. It is well known that later, feeling the want of such a government, and not understanding at all how to manage to get a *national* government, the heads of the villages all over the vast places already colonised (chiefly due north of the Dnieper, where Nowgorod and Pskoff had become trading emporiums with the north, in the same way as Kiew was the trading emporium with the south) were agreed upon inviting the Waraegers, whose attacks they had just repelled by a general popular rising, to return in peace and to govern them. But when this took place, we find the Russians already widely spread among the Finnic tribes of the north-east. It seems that they had already lined the whole net of rivers with their villages, being eager fishermen, as the Russians are to the

present day, like all Slavonians, and preferring, as passionate gardeners, which they still also are, the black alluvial soil of the river-banks. The interstices of this network of settlements, however, were still peopled with Tchude hunters, among whom an isolated household of alien-born colonists, probably, would not have been safe. Nor would the Russians themselves, being no hunters, have been safe from the bears and wolves which the Finnic hunters, up to the present day, are never afraid to encounter in single combat, even without fire-arms.

Thus the closely-packed village, in which block-house borders on block-house along the two sides of the broad village street, shut up at the two ends by stockades or block-houses placed across, was the only possible, endlessly repeated, form of settlement.* A clearing of the forest by common labour of the colonists had furnished the acreage and the building material for the block-houses. The enclosed space of the village street was the common workshop in summer, for carpentry, for making the hemp and flax ready for spinning and weaving, and for bleaching the cloth, &c. The cattle-stands, threshing-floors, and barns were attached to the single block-houses, showing the stage at which village labour and village property ceased and individual labour and individual property began.

As a further consequence of colonial isolation, the village, as a rule, and as far as possible, was self-sustaining. In order to be able to form an idea of the past, present, and future of the Russian people, it is of high importance to bear this original character of the Russian village settlements, easily traceable from the present state, strictly and continually in mind. The most prominent feature of a settlement, which in the beginning and perhaps for a long time was unable to enter into commercial relations with other settlements, will be, that just the amount of acreage necessary to furnish the food and the clothing material for the villages will be tilled, *and not more*. For to till more would be far from correct management. It would merely be taking away time and labour-power from other work just as necessary, where everything that is wanted is to be done on the spot. This also indicates the corollary to be

* The Slavonic and Teutonic names for a village (Russian, *derewnia*; Scandinavian, *trup*; German, *dorf*; Anglo-Saxon, *thorpe*) have the root in common with troops, troupe, troupeau, and signify aggregation for protection's sake.

expected. Where the husbandman is not more of a husbandman than is just wanted to produce what a single family consumes, and yet is not a savage, but already accustomed to a certain degree of comfort, we must expect to see him a handicraftsman, too, of very variegated skill—a kind of jack-of-all-trades.

As said before, the possibility of constantly throwing off the surplus of the increasing population of the village by founding a daughter-village on virgin soil, was calculated to take away every stimulus to change the system, which, at the same time, was so extremely fitted to the exigencies of that primitive colonisation. While all the other Slavonian nations, the Little Russians not excepted, followed to a certain extent the ways of Central and Western Europe (a process which partly was quickened by conquest, those farther west being almost invariably the conquerors of those farther east), the Great Russians alone kept the original form of settled life of the Slavonian race intact. Their place on the utmost north-eastern wing of the race, putting them at the same time out of reach of western conquest, with nothing but huntsmen, and nomads, and virgin soil all round them, made *expansion, not change*, their law of progress, just as it seems to have been the case with the Chinese, whom they are now facing.

The village, at once the smallest and the largest compass of the social thought of the bulk of the people, now became the prototype of the empire, which, beginning with Rurik's election to the czardom, became destined (after passing through vicissitudes of all kinds—self-created confusion as well as foreign invasion) to inherit the fruits which the unassisted and unguided, modest and silent, but continuous colonising labour of the ancient free Russian villagers has borne. The villagers—who in their village governed themselves by patriarchal rule—after they had become conscious, by means of sad experiences—inroads of eastern nomads, and plundering excursions of northern and western adventurers—that the merely sentimental link between mother-village and daughter-village was not that national solidarity of which the hostile foreigner has to beware, considered, after the constitution of czardom, all Russia, as far as it already went, simply as one great village, likewise under patriarchal rule, likewise on a soil the common property of all, likewise sufficing to itself, and likewise having to do with aliens only in common; and this is still the conception which the

Russian people entertain of their state. The savage drama of the political history of the country, the extirpation of resisting tribes chiefly in the west, the sanguinary feuds between the princes of the Imperial House, the partitions and re-partitions of the empire, even the struggles which accompanied the introduction and spread of the Greek Church—all this had no bearing on what will always remain the most interesting phenomenon connected with the rise of Russia—namely, the growth of a very numerous *new people*, spreading over a very extensive area in a comparatively very short time, in Europe itself, without the remainder of Europe even becoming aware of it!

What is recorded by Nestor shows merely that a military government and taxation having been introduced, and a professional priesthood established (likewise borrowed from abroad, after a vain attempt to turn the native heathenism to account for the same purpose), the same fights about the legalised prey had begun in Russia which constitute the political part of every other nation's history. Protection from plunder by the foreigner had everywhere to be bought from legalised plunderers at home, and everywhere has the extent to which it was to be legal been fought for, and everywhere did the plunderers contest the prey amongst themselves. What is *not* recorded in written records, but is shown by the results to which it has led, is the cementing process which now took place, and which marks the *second* stage in the mighty colonising movement going on imperceptibly in the north-east, without even the colonists themselves being conscious of its extent and significance.

While Little Russia, the true mother-country on the Dnieper, and the tracts of land on the north-west of it, bordering on Poland, and inhabited by minor Sclavonian tribes of mongrel character, now comprised under the name of Ruthenes, Russians, or Rusniaks, remained the theatre of civil as well as of foreign wars, the colony in the north and north-east, as whose starting-point the country around Nowgorod has to be considered, enjoyed a comparative repose, and had all the advantages of national and ecclesiastical unification. The foundation of village by village must have gone on unabated as well as the pushing forward of the north-eastern frontier of the settlements; for the geographical horizon rapidly widens in the records of the historian. As a distinct race the race of the

Great Russians had first been formed at Nowgorod, on originally Finnic soil, by mixture with the Finnic tribe of the locality. Along the Neva, and the large lakes and water-courses of which it forms the mouth, the Finns had resisted farther encroachment. Their most warlike and proud tribes were settled there ; but farther east, where the same race occupied the whole country north of the Oka, and even farther south, and as far in an easterly direction as the river Ob, in Siberia, they were too thinly spread, and too little civilised, to form an obstruction to the constant advance of the Great Russian village colonies. They continued for some time to fill the interstices of the network of river villages, living the life of huntsmen or lonely settlers, as before ; but with the national unification and Christianisation of the Great Russian invaders, the time of the total absorption of the aboriginal people had arrived. They were turned into subjects of the grand prince, or czar, and the prince, his relative and vassal who presided over the district ; and they gradually disappeared, and are still so disappearing, among the villagers. For these latter henceforward refused altogether to respect the hunting-grounds left free between their villages. Simultaneously now with the extension went on the densification of the network of settlements. The erroneous notion is often met with in Western Europe, that the whole of Russia, without exception, is but thinly peopled. It is true that *very large* parts of Russia are *very* thinly peopled, of which more anon, but the centre of the empire, on the Upper Wolga, on the Oka, and between these two rivers, a lump of land by no means despicable, shows the villages as close to each other as anywhere in Western Europe ; and if the same figure of density of population is not found in the tables, it is not a lesser village population, but a lesser population of the towns, which are few and far between, and sometimes very small, that accounts for it.

The Church assisted the colonising movement in another way. Pilgrimage had been introduced. One has to think of a people living in close confinement during a long winter, followed by a short and hot summer with protracted daylight, whose allurements produce a feeling of restlessness ; of a people, moreover, living in villages, every one of these villages looking back upon another, often very distant, village as a mother that claimed a visit ; of a people, finally, living in community of household interests, among whom the pilgrim,

who sets out on his journey with the consent of his fellow-villagers, need not fear of seeing his interests neglected. Besides, migrations of long files of emigrants on their way to the new settlement having been of yearly occurrence from times immemorial, and these having been able to appeal on their way at every village on the roadside to the remembrance of a similar migration of the more aged and influential villages, hospitality to pilgrims could not but become at once a cogent rule. It is so still. Bread and the summer drink of the country, kwass, a kind of very thin, unfermented beer, are never—not by the poorest peasant—refused to the traveller; and if payment for it be offered, its acceptance is invariably refused with indignation. The short nights, and the clothing—adapted even to severe colds—permit a night's rest in the open air, if no other is to be had. Thus the institution of religious pilgrimage—convenient pretext for the migratory propensities of mankind—could find nowhere a more congenial soil than in Russia. It was but natural that the place of worship to which the religious pilgrimages were directed, and the mother-settlement, which a long-preserved attachment, transmitted in fireside tales from generation to generation, longed to see, in very many instances coincided. For the spread of convents, usually the ostensible places of destination of pilgrimage, *followed* the spread of settlements. The neighbourhood of a mother-village which had already many daughter-villages was just the place to erect a convent.

It will now be easy to imagine how colonisation must have been pushed by the increased restlessness which the united Church with its pilgrimages had brought over the whole nation, and by their becoming conscious, partly through the medium of their own feet and eyes, partly through the recitals of travellers passing their houses, of the immensity of the territory already under their grasp, and the boundless extension of unoccupied land in an easterly direction. The pilgrims were to them what American emigration agents now are to English, Irish, and German villagers. The pilgrims' refectory in the convent, where the pilgrims from far and near met, was their newspaper.

The seats of the princes, whose number sometimes was very great, and the seats of the convents, could not but gradually assume the character of larger or smaller emporiums of commerce. The swarms of peasants, which they periodically

attracted, provided for it. The creation of a number of centres of commerce was the *real* and *palpable* result of the establishment of Church and state among the villagers of the great plains of Eastern Europe. But it would be a mistake to liken the Russian cities, even at the present day, to the cities of Western Europe. They never became, to a similar extent, the exclusive seats of industry. They remained pre-eminently marts of exchange whose lot it was to introduce division of labour between village and village, not division of labour between agriculturist and artisan, but between the peasants of one village, who continued to till the soil for their own sustenance, and who now began to apply the remainder of their time, instead of to all work, to some distinct occupation, and the peasants of other villages, who did just the same. Village industry is still *the* great industry of Russia. It would be very rash to condemn this as misguided activity. It must not be overlooked that in Russia the time for work in the open air is shorter, and the time for work in the house is longer, than in Central and Western Europe. It will then easily be understood that the settlement, which first was compelled by colonial isolation to sustain itself, and had the disposal of a long winter to provide by house-industry for *all* the wants of the settlers, was not easily induced to give up the advantage derived from house-industry in winter, when the gradual introduction of division of labour between village and village, through the medium of marts and exchange, rendered house-industry more profitable.

We arrive now at institutions of still stranger appearance, when measured by the standard of Central and Western Europe, and yet easily intelligible, if it be but kept in mind that one thing binds the other in the web of civilisation. Immovable property being the common property of the village, and even the title-deed of movable property being derived at some previous time from repartitions by common consent, it was but natural to the villagers to consider the whole of the trade which had sprung up between them and others *likewise as common property*. Was the son of the village, who had been permitted to set out, first on a pilgrimage, or a journey to court, then—the occasion having brought about the discovery of gain to be made by selling and buying, as a commercial traveller—alone to reap the benefit of his journey, which he could not have made had not his village been a common household? Thus

the habit sprung up and became a law in the eyes of the villagers, that whoever of them, being abroad, got orders for articles to be produced by the house-industry of his village, did not get these orders for himself as speculator and employer of labour, but for the village as a whole, and that the orders were to be distributed among the villagers by common consent. And thus things are still managed to a large extent.

Thus the second—in recorded history the first—stage of Russian peasant life shows us the peasant as an *artisan*, at least where division of labour had changed him into an artisan, and a member of a society of “adventurers,” who at the same time continued to produce the food necessary to feed them and their families, and partly the raw material for their branch of industry by the common husbandry of the village, which still formed the social unit of the country.

The Mongol invasion, though it lasted two hundred and twenty-five years, appears to have had no influence whatever on the life led by the villagers, nor even on the spread of their settlements. The business of the Mongols was with the grand prince, the other princes, and with the clergy. They humiliated the princes and made them pay tribute—that is to say, give up part of the taxes they received from the villagers—but as for the clergy, they even took off taxation from them. The state in which the country emerged from the dominion of the nomads shows that it cannot have suffered much; perhaps it had even benefited. For it would seem as if, in the time immediately before the conquest, there had already been attempts on the part of the single princes to prevent the people from leaving their state or province for the purpose of erecting new settlements elsewhere. With the nomads the old liberty returned. It is very probable that colonisation continued unabated even under Mongol rule. The immunities and favours bestowed by these shrewd Asiatics upon the priestly order cannot but have assisted colonisation. For the Church was not merely indirectly, through pilgrimage, but directly, through hermits and gardening convents, a colonising agency. The priestly order, recruited from the peasantry, remained faithful to their habits and propensities.

With the withdrawal of the Mongols into Asia began the disenfranchisement of the great bulk of the peasantry, but it progressed very gradually. Records are insufficient, but the state of things met with at a later and better-known period

admits of pretty safe conclusions. The main lesson drawn from the experience of a foreign dominion was, that the bond of unity of the empire had to be drawn tighter. The rule of numerous princes, vassals of the grand prince, who now officially adopted the name of Czar, or rather Zar, had to be done away with, at all events. Iwan III. commenced the struggle, Iwan IV., the Terrible, brought it to a successful issue. This struggle favoured the growth of a petty nobility, formed partly of the courtiers of the late princes, whom the czars left in possession of the yield of the taxes of such villages as had been allotted to them by their former masters, without insisting upon regular service on their part, merely reserving the right to summon them when wanted. Such is still the relation of the whole Russian nobility to their czar. It consisted, further, of the czar's own servants, which were partly taken from among the villagers themselves, likewise endowed with the yield of the taxes of one or more villages—and lastly, the proprietors of such villages, mainly situated in the western parts of Russia, which had been formed of slaves, and had always been the property of their masters.

Villages not being disposed of in such a way seem to have remained free villages or crown villages till the later years of the reign of Iwan IV., who seems to have commenced the practice, largely resorted to in later times, of turning crown villages into villages belonging to the czar, not as sovereign of the country, but as landed proprietor. Such villages, peopled by prisoners of war and their offspring, the slaves of the czar, must have existed always, just as similar villages, mentioned above, were in possession of single noblemen. But there can be little doubt that Iwan IV., in designating by a legislative act which villages were henceforward to be considered as state property (Siemschina), and which as property of the czar (Opritchina), did so for purposes of appropriating what was not his own. He appropriated in this way even cities. The lawlessness of his proceedings is proved by the amends which were made for them in later times, when at least all the cities and other property were again excluded from the Opritchina or appanage of the imperial house.

The changes effected amounted to this, that a very great number of villages, having been formerly free communities, merely paying taxes to the state, had been turned into estates of the czar and the nobility, on which the peasantry had to pay *rent*.

The amount payable remaining unaltered, and the person to whom it was to be paid remaining the same, the peasantry, perhaps, did not even become aware of the change. They may still have considered their village as a little socialistic and patriarchal republic, just as the bees in the hive are not aware that they have other masters besides their queen.

But the time was now fast approaching when every doubt that their old liberty was gone should be removed from them.

Popular poetry in Russia has kept alive, in rhymed wails, the memory of St. George's day, as the day when Boris Godunow, the usurper, published his ukase, by which the Russian peasant was forbidden to quit his village without permission and passport, either from the proprietor of the estate, into which the village had been turned, or, where it was still a free village, from the authority to which it was submitted. The ukase, besides, ordained that every peasant not being provided with such a passport, and being found wandering about the country, should be taken into custody, his personal identity and his whereabouts should be ascertained, and that he should be sent back in irons to his village, where punishment might be inflicted upon him for having left it without permission.

Boris Godunow is represented to have acted thus, in compliance with the wishes of the petty landed nobility—his main supporters. They had represented to the Government that the fiefs they held in exchange for service done, or service they were bound to do, were valueless if the peasants were permitted to emigrate. Modern writers, even Russians themselves, and still more French and Germans, have not shrunk from justifying Boris Godunow and his nobles, by asserting that this was the only means of putting an end to the nomadic propensities of the Russian people, which the Mongol invasion had fostered anew. But where is the slightest evidence of nomadic propensities among the peasantry of Northern Russia, *before* that time, *at* that time, and *after* that time? Not even the Cossacks—fugitives, as they were, from oppression in the southern steppe—bore even the slightest resemblance to real Nomads. To colonise and to nomadise are two very different things. Just as well one may talk of nomadic propensities among the English, or the Spaniards, or the Dutch, or the Germans. The truth is, that just towards the end of the long reign of Iwan the Terrible the colonising movement in an *easterly and southerly* direction had assumed new proportions. The Khanats of

Kasan and Astrachan had been conquered; Siberia had been discovered by the Cossacks, and a large part of it conquered; the steppe and the black country in Southern Russia had acquired a safety unknown before. The commerce of the West, the fur-trade of Nowgorod with Germany, which was more a trade of the Finnic hunters than of the Russian village artisans, and of Kiew with the Byzantine Empire, had almost ceased, Iwan III. having crushed the former by imprisoning German merchants, and the conquest of Constantinople by the Turks having crushed the latter. Instead of it, commerce with the East, with Central Asia, had commenced on a large scale, first introduced by the Mongols, then favoured by the conquest of the two Khanates and of Siberia. Here it was the produce of the industry of the Russian villagers that was sold; and the further eastward they went with their settlements the more they benefited by it. The whole nation was astir with colonising projects; and the records of the dates of foundation of the older settlements in the East show how many of them were carried out.

But then the proprietors of the villages, now private estates, and the czar himself, as proprietor of the appanage estates, lost the advantage of *increasing* population on their estates and of an *increasing* rent from them. They, besides, lost the power of *raising* the rent. What I am about to add is mere probability, but it is probability; a certain approach had taken place between the Russian *Government*, isolated after the fall of Constantinople from all other Governments, and one at least of the Governments of Western Europe. The *English* had found the way to the White Sea, and already Iwan IV. had exchanged embassies with Queen Elizabeth; and Boris Godunow continued amicable relations with the Queen, and even attempted to bring about a marriage of his son with one of her relatives. His ambassador, Mikulin, took even an active part in the streets of London in the quelling of Essex's insurrection. Mikulin had to report to the czar on English legislative institutions. In the year 1601 (Stat. 43, Queen Eliz.), the great poor law, crowning the efforts of the Tudor age in dealing with the difficulty of pilgrims and vagabonds—the bane of the country, down from the time when Henry VII. abolished vassalage—had become the law of the land in England. It had been preceded by Stat. 14, Queen Eliz., which ordained that the abode of persons who could not or would not do work was to be fixed

to the parish in which they were born, or in which they had resided during three years, and, in case of vagabonds, during one year. Might not Boris Godunow, whose legislative acts in the matter date from 1592, 1597, 1601, and 1606, beleaguered by his nobility, and getting the convenient pretext of a famine (which broke out, engendering swarms of beggars and a typhus-epidemic, which these beggars carried all over the country), and informed by his ambassador of the wise counsel, under similar circumstances, of the advisers of the English queen, have tried a Muscovite version of contemporaneous English legislation? Indeed, it looks very much like it. Proneness to imitation, and reckless boldness in trying it, is a Russian characteristic to this day, of which more anon.

The decisive blow had fallen. It did not at once bring about its final results—compulsory labour of whatever kind the master demands from his slave—but it contained it in germ, and the development was rapid. The first and most important consequence was, that colonisation was checked for a long time, and only recommenced when the masters, having become masters in full, themselves found it profitable. The whole seventeenth century shows the heart in the prostrated body of the Russian peasantry still palpitating. The enshrined spirit of liberty asserts itself in religious sectarian movements, in agrarian risings, in bold brigandage, under the seductive form of free Cossack life. It was reserved for the eighteenth century to consummate the worst. The harmless and gentle villagers, who for the love of wife, child, brother, sister, and neighbour, had conquered the uncongenial eastern plain of Europe for civilisation, now disappear, as working agents, from the historical records of their country; they have become mere tools to work with, mere matter to be worked upon. They are now “mujiks”—bodies—“tchornoi narod”—black people: something like niggers, as it would seem. A large part of them are bought and sold with the land; without the land, they are merely let out, and feel themselves most favoured when let out to themselves.* And yet it would be wrong to liken their fate, even when it was worst, which is during the time from Peter I., the Great (!), to about the accession of Alexander I., to that of the black slaves in the colonies of Western Europe. Patriarchal

* The household serfs, being considered as the offspring of the slaves of the middle ages, were sold without land, and, as it appears, in spite of the law, numbers of peasants, too, under pretext that they were household serfs.

feelings and patriarchal habits never became extinct, either with the Russian serf or with the Russian master. The harmless and gentle character of the villagers is the harmless and gentle character of the nation, which has but the fault of bearing good luck not so well as bad luck, and of becoming drunk with transitory pride, with still more transitory anger, and with zeal, more transitory with them than anything else.

The attempts to relieve the fate of the peasantry began with the government of the Emperor Nicholas. The state of things with which he had to deal had received a finishing stroke by a set of Imperial decrees of the Emperor Paul in the year 1797. These decrees, which at least had restored to the peasantry the right of electing their village heads, were left intact by Nicholas, except as far as the "private peasants"—that is to say, the *serfs* of private proprietors, or of the czar as private proprietor—of estates were concerned. The most important change of the Emperor Nicholas was introduced by a ukase issued in 1842, which permitted to the proprietors of private estates to transform, by treaties, their serfs into farmers, the Government vouching for the former serfs fulfilling the conditions undertaken by them in the treaties. The idea was to see what forms of treaties would prove the most popular and acceptable to both sides, and then, if still need be, to frame a general compulsory measure, in which the contents of the popular form or forms of treaties were to be embodied. But very little use was made of the expedient, as has been asserted from the difficulty of settling things with the mortgage-holders. The Emperor Nicholas, besides, by ukase issued in 1848, abolished the interdict to private peasants, of buying immovable property. He further reinforced the law interdicting the sale of peasants without land, by forbidding its evasion by transforming peasants first into household slaves, and also the sale of land without peasants, if, by such sale, the village-acre was curtailed in such a way as to amount to less than four and a half djessatines (twelve acres) for every male villager. Finally, he issued regulations defining more distinctly than the law did before, how much labour, or how much payment in lieu of labour, in a variety of cases and places, the peasant-serfs owed to their masters.

But all this did not amount to much, when compared with what the position of the peasantry once was, and with what it since has become. When the Emperor Alexander II.

announced his resolve to do justice to the peasantry, he found still nearly one-half of them—forming with their families more than one-third of the population of the empire—to all practical purposes slaves, tilling a soil which did not belong to them, without being paid for their labour, during about three days in the week, while they had to sustain themselves and their families by their labour during the other three days, likewise by tilling a soil which did not belong to them, and not in the way they chose to do it, but as they were permitted, or rather ordered to do it.

The serfs, though their number had *comparatively* declined, formed still the largest group among the Russian peasantry. Next in number stood the *crown peasants*, the remnant of the old free peasantry, turned into copyholders from the crown, and governed by servants of the crown. Their position has not been touched by the act of 1861, but by a recent special act, which has been framed to bring the position of this part of the peasantry into better accordance with that of the enfranchised private peasants. It must not be passed over that, at least to the eye of the foreign travelling observer, there is no marked difference of well-being visible between the villages of crown peasantry and those of private peasantry. There are Russian authors—but such as belonged and still belong to the political opposition in the empire, like Golowin and Dolgorukow—who pretend that the crown peasants had and have far more to suffer than the private peasants. Dolgorukow, in particular, whose work, "The Truth about Russia," was published but shortly before the act of 1861, gives a revolting description of the abuse which the functionaries of the crown, entrusted with the administration of the crown villages, make of their power. The crown peasants had then and have still to pay copyhold-fee to the crown, part of them by each head of the male population, part of them in shape of a real land-tax, and were then still burdened with a certain amount of compulsory labour, which, road-making excepted, now has been superseded by fees. The fees levied by the head yield ten millions of roubles, the land-tax thirty millions of roubles. The highest fee on the head is 2r. 86k., the lowest 2r. 15k. The copyhold-right is always a right of the village as a whole. The sale of it by the villagers was not permitted, yet they might so far dispose of it as to barter their position with other crown peasants, or even with private peasants, on certain conditions.

And they might let out the land for fifty years to other persons ; an arrangement evidently designed to facilitate the erection of industrial establishments in the country.

The minor groups consisted, before 1861, firstly, of *freeholders* living in farm-yards separated from every village. They are to be met with in Great Russia, in the southern governments, in the so-called country of the black soil. They are supposed to be the Russianised remnants of the original inhabitants of the country, the Tchudes, who, in the south, on the fertile soil, were not merely or pre-eminently huntsmen, but agriculturists too. This is very probable. It is said that a far greater number of them would still exist, had not Peter I. recklessly deprived them of their freehold right, and compelled them to become crown peasants. They are further to be met with in the Western Ruthene provinces ; and there they are the offspring of the lower Polish nobility (*shlachta*), who invaded these provinces and settled down in them, and afterwards were unable to prove their noble descent. Another group was formed by the *serfs* who had bought immovable property since 1848. There were further Russian bojars, whose nobility was not proved, or was lost, and who, therefore, were considered as *glebæ adscripti*, though on their own property ; and Cossacks, whose freedom and right to their property had been recognised. All these groups, together with a very small amount of Russian peasantry tilling the property of other persons, without being serfs—namely, of persons not entitled to *have* serfs, because not being noblemen, and yet landowners—were evidently exceptions, and not the rule. The remainder was not of Russian nationality.

The measures adopted by the Emperor Nicholas for initiating and stimulating a voluntary abandonment of serfdom on the part of the masters, as a rule, having proved abortive, and yet great numbers of the masters themselves having become fully conscious of the increasing personal danger to which they were exposed so long as they had to deal with their serfs, this much was considered as a settled thing, when the Emperor Alexander II. ascended to the throne, by himself as well as by his people, that at all events *serfdom* was now to be entirely and forcibly eradicated from agrarian legislation in Russia. In this primary and unconditional postulate all the world agreed. But nobody, not even the most strenuous advocate of unlimited rights of property in land, conferred by superannuation on the proprietor

in legally acknowledged possession, could hide from himself, that merely to sever the link between master and serf, and to make this measure at the same time sever the link between the serf and the *land*, would be, besides an historical injustice, a political blunder involving the most direful consequences. For what was to become of the enfranchised serf? An agricultural labourer? Would this be the use he would make of his freedom, that he remained what he had been, with this difference, that his master, now called his employer, could—in his idea, far worse than to whip him—turn him out of doors with wife and child, at the slightest symptom of even a justifiable disobedience? A farmer? And if a farmer, a farmer of what? Merely of the land necessary to provide the food and clothing for the family? But, being unable to pay any rent out of the produce of this land, he would have to do other work to enable him to pay the rent. What work? Village industry? Field labour on the proprietor's land? Would not he thus legally be the same labourer as above, only with notice to quit by the year, instead of by the week, for practically it would be by the year in both cases; and in both cases the security of his sustenance, which with serfdom was perfect, would be superseded by a constant apprehension of losing his sustenance, and render him as resistless as farmer against rack-rent, as he would be resistless as labourer against depression of wages and maltreatment. Practically, in both cases his position would be exactly the same; for the rack-rent in the one case would be but another form of the depression of wages in the other. Everybody—economist as well as socialist—understood that the economical, or social law, as the reader likes, which regulates the relations between employer and labourer, and between proprietor and farmer—a law which the economist trusts, and the socialist curses, at all events was not applicable, where the threat of the loss of a homestead and of a sustenance hitherto enjoyed by the future labourer or farmer under very different arrangements was thrown into the balance to the employer's or proprietor's advantage, and to the labourer's or farmer's disadvantage. It could not but have rapidly brought about a probably fearful state of the country. It would have soon filled the country with swarms of peasantry, wandering to and fro, now begging, now endangering the safety of the roads, and finally of the country-seats. The pretext of Boris Godunow would have been turned into a reality.

The resolve of doing away altogether with serfdom involved, therefore, in everybody's eyes in Russia, at once a *second* resolve—namely, that of settling the *land question* between the late *master* and his late *serfs* in such a way as to prevent the bulk of the peasantry from becoming suddenly and simultaneously unsettled and homeless, and thus to make the new relations between employer and labourer, or between proprietor and farmer, take their issue from positions duly balanced between them.

But this being agreed upon by almost unanimous consent, a *third* still more precarious problem at once emerged, so to speak, from the deep sea of agrarian history in Russia, and forced itself on the anxious attention of the native statesmen and writers on public affairs.

If the land was to be divided between the master and his serfs, was the single former serf to be invested with freehold property, in accordance with what had taken place under similar circumstances further west in Europe, or was regard to be had to the old national custom of common village property and joint village husbandry—the “Mir,” as the language has it, in an expression not to be translated into a language of Western Europe? This question was still alive and paramount in the horizon of peasant thought, though now in the disguise of a common household, not by common consent, and free to act as the members of the household liked, but of a common household placed under the supreme will, in the last instance, of a resident or absentee master, belonging to another sphere of society than the members of the household themselves, and being either the czar himself or somebody else, who lorded it over the Mir, in the eyes of the peasantry at least, always in the name of the czar. The *land question between peasant and peasant* was therefore a third question embodied in the primary one of the total abolition of the bondage of agricultural labour.

It finally appeared that local administration and local jurisdiction, yes, even that amount of local legislation which can never totally be dispensed with, could not remain, with an enfranchised peasantry, what they had been before, when a good deal of the duties of administration, jurisdiction, and legislation, as far as the serfs were concerned, simply devolved on their master, whose supreme will was the Alexander's sword for cutting many a Gordian knot. The necessity to *supersede individual* will in affairs, which from *private* affairs had become

public affairs, by *collective* will, was the *fourth* of the problems by which the Russian reformers had to be prepared to see their legislative abilities tried, after the removal of the stain of slavery from their national escutcheon had once become their firm resolve.

The moment has now arrived to mention the most prominent features of party division in Russia, with regard to the reform of agrarian legislation. They may be described as the economist and imperial party on the one side, and the socialist and national on the other, the former, at the same time, being reproached with aristocratic leanings, the latter very ostensibly professing democratic ones. It would be very erroneous to compare them in any way to Conservatives and Liberals in the sense of Western Europe. They would, both of them, repudiate it themselves with rather contemptuous laughter. The faith, the very sincere faith, of the socialist and national—which, with them, does not merely mean Russian, but Pan-sclavonian—party is, that it is all over with the particular form of civilisation which is dominant in Western Europe. According to them, the future belongs altogether to the Russian “*Mir*” and to the Slavonian race. Communism in land is designated by them as the particular Sclavonian substratum of civilisation. According to them, the nations of Western Europe, who, all of them, in times dating back very far, knew of institutions similar to the Russian *Mir*, committed a fatal blunder already at the beginning of their career, and condemned themselves to unavoidable decay setting in sooner or later, by allowing land to become the object of individual right of property, which, among the Western nations, was established by the formation of a feudal aristocracy first, and the revival of Roman law afterwards. Land, they argue, having never been produced, but found, derives the value which we now find adhering to the bare acre exclusively from social, not from individual efforts. Rent paid to individuals has therefore no foundation in justice, but only such rent as is paid to meet the public expenditure of the smaller or larger community, the parish, the county, the state. The position of this party in regard to the land question, as a question between noble proprietor and peasant, was therefore to make light of the inherited or purchased rights of the proprietor, to insist upon as much land being taken from him as possible, and of his being treated in future simply as one of the peasants of the village. Of course they were aware that

they could not entertain the hope of seeing such a scheme carried out in our times ; and those of them who were called upon to take an active part in framing the new legislation did not even attempt it, strong as their influence was. But notice is to be taken of the existence and collaboration of a political party and of statesmen who, as far as they consented to leave to the noble proprietor rights of property, singled out from the common ones of the village, did so from reasons of expediency, and not from inclination or conviction. It had its very sensible influence on the *quantitative* side of the arrangement effected.

The confiscation of rent, on which the Slavonian socialists put the construction of a restoration of the original and inalienable right of property of the community in the soil, rests evidently on a theory on which they must be prepared to act, if it be shown to them that its sincere adoption involves the necessity of not merely applying it to the settlement of the affairs of the living generation, but of a constantly repeated application. They are, however, fully aware of this, and do not shrink from asserting that they are not merely prepared, but really engaged in so acting. And they point, for proving this, to their arduous and unconditional defence and recommendation of the Mir, which is *their* solution of the *second* problem of the land question, namely, of the question between peasant and peasant.

Property in the soil being considered the property of all, it becomes evidently necessary to decide on what title to rest the claim of the individual to work a certain parcel of this soil. The reply of the Slavonian socialists is very plain ; they say, let the title be composed of his free will and of *his evident ability*. What ? the stronger or more intelligent man, or the man with more working capital, is to get more than the others ? The reply is, this is not what, in the first place, we are meaning. Before all other considerations, we have in view *the man with a larger family*. In Western Europe the difference in the number of children between one family and the other is a more frequent cause, particularly with the class of small landed proprietors and of small farmers, of the increasing difference between wealth and poverty, than laboriousness and parsimony here, idleness and spendthriftiness there. The great bulk of every people, under the influence of custom and neighbours' gossip, are pretty nearly alike as to economical habits. Yet poverty, as well as wealth, is on the increase in the West, with

the peasant population in France and Germany, and with what is left of that class in England. We ascribe it to the blessing not being known there of our "Mir." In a Western village with divided soil a family gets poorer by being blessed with numerous children in rapid succession. For during the first fourteen years of his life the child is a mere burthen, and while the family which the soil has to feed grows, the soil they possess and are able to till does not grow ; and even when, fourteen years or more later, they are enabled to till more soil, by the growing maturity of their progeny, in numbers of cases it has become too late, and they are not any longer in the position to buy or farm more soil. In our "Mir" the family is not impoverished by the birth of a child, but, on the contrary, *enriched*. For with the number of children increases the share of the family in the village household. Of all that is held in common and produced in common they partake a head's share more. *The birth of a male child thus is our new title to the right of husbandry on a unit-share of the soil of the empire ;* and here you have the constantly-repeated application of the theory in which we believe. The "Mir" is merely a commodious instrument for effecting it. As far as the surplus of progeny in one family is counter-balanced by the sterility of other families in the Mir, the title acquired in the Mir by the birth of a child involves no curtailment of the titles of the other members of the "Mir." Voluntary emigration into cities is further calculated to prevent any rapid decrease of the size of the unit-share. It is true that with the birth of the child the increase of the family's ability for working the soil is but yet prospective. But what else takes place, save that a debt is incurred, which the child grown up will have to repay in similar manner ? Those who have fewer mouths of children to feed have to work for those who have more such mouths to feed. We are levying a kind of rate, not appearing in public accounts, for counter-acting the effects of such inequalities between family and family for which nobody is responsible. For we do not consider anybody responsible for the number of his children. We do not believe in the doctrine of the necessity of self-imposed restraint as means to and result of a higher stage of civilisation. It is against nature ; it cannot be right. Our village rate for assisting numerous families, to prevent inequality of wealth to creep into our villages, invented not by theorists, but by our people themselves in times beyond the dawn of history, is the result

of an instinctive forethought, for the absence of which you in the West are punished by your poor-rates. What our people pay at once, when it can be both given as well as received with a good grace, yours have to pay afterwards, when it is burdensome to give and degrading to receive—when it, besides, is unable to cure an already hereditary evil. The “Mir” of the village, of course, is only a stage in the application of the theory of communism in land. Should the increase of the population of the village have increased in such a way as to reduce the unit-share too much, we mean to resort to the old expedient of our people, colonisation. We have still uncultivated land enough, and very good land too. And if we had not, we would know how to procure it. Of the new village, the nation, the empire, has to take care, as the village does of its child.

I have let the Pansclavonian socialists speak on this particular land question between peasant and peasant so extensively, selecting from what I have read and *heard* what appeared to me their most *plausible*—by no means convincing—arguments, because it is the question they have most at heart. In fact, it is the national pride which one has here to deal with. I have the impression—I cannot help it—that the Sclavonian nations, being so very late and backward with their reformatory era, must absolutely have something for themselves. Their young men, and in Russia itself, perhaps still more the young ladies—who are very busy and enthusiastic, and undoubtedly of a general education more resembling man’s highest education than is the case in any other country, England, America, and Sweden not excepted—rushed in swarms into the political arena, as soon as the death of the Emperor Nicholas, the humiliation of the Empire in the Crimean war, and the declared willingness of the Emperor Alexander II. to unfetter the forces slumbering in this great nation, had sounded the death-knell of the German tutelage under which the nation stood before. In their youthful national enthusiasm, they looked round to what was either truly Sclavonian or altogether new. The German youth did just the same after the war of liberation from the French; and the time from 1815 to 1820 in Germany bears a striking resemblance to what took place in Russia during the first five years of Alexander’s reign. The Russian youth now discovered the very old Russian Mir and the very new French socialism, and

had what they wanted. Now Russia need no longer lower her head before anybody. She was as far advanced as the boldest French radicals, and yet could proudly tell them that, what with the French had ended as a dream, with the Russians had begun with a reality—a reality which they had always possessed, although in a mutilated form, despised and maltreated; and that they possessed it still. There was no arguing with them, for they would not argue. They *would* believe what they liked to believe, were sharp-witted enough—for they *are* sharp-witted—to find out the most plausible arguments in favour of their belief, and not sober enough—for they *are* not sober—really to busy themselves with examining the arguments against it.

It was not the fault of the Russian socialists, when the occasion has not been made use of to introduce the great Russian Mir all over the empire, to make it compulsory on the enfranchised peasantry, and to make it perpetual. However, as they profess the firm conviction that at least all the Sclavonian people still prefer common to individual husbandry, they could not but admit that to leave it *optional* with the enfranchised peasants, if they would continue the arrangement which they had established when free, and, as serfs, were compelled to uphold, was all they reasonably could insist upon.

As to the new organisation of local administration, jurisdiction, and legislation, which was concomitant with the measure, it is manifest that the socialist democratic party I am speaking of repudiates any other machinery but that of election by the people to all the representative as well as the executive charges and appointments of local self-government, *with salaries*, as far as pretexts and money for them can be got, and without any but the most obvious disabilities. Here the necessity to secure as many interested advocates among the people themselves of peaceful co-operation with the Government and the aristocracy for steering the dangerous measure into port, clear of the rocks which mark the passage of every serious social reform, has greatly assisted the views and the wishes of the Russian social democrats; and Russia is perhaps at present that country in Europe which, in the inferior parts of its political organisation, comes up nearest to the ideal of democracy. The stratagem to have the part of the business more odious to the peasants done by elected but paid—very well paid—peasants, and the part more odious to the proprietors likewise by elected, but paid --

very well paid—members of the class of proprietors, has been considered as a particularly lucky stroke of policy on the part of the late minister Miliutine, the statesman who enjoyed the confidence of the Russian social democrats, though he did not quite belong to their number. Time only can show if it really will prove lucky.

The Panslavonian socialists were the movement party in the affair ; the more aristocratic Russian patriots, who still are looking to Western Europe as a teacher, who have begun to make political economy a favourite study, and who meditate, before all other things, the transition of their state, cautiously and by degrees, to parliamentary government—not much in favour with the Russian socialist democracy—were willing enough to do everything that was needed to re-establish the personal liberty of the great bulk of their people, but disinclined to sacrifice the interest of the class of noble landowners to any such extent as to impair their fitness for constituting a native and independent political gentry. For, without this being accomplished, parliamentary government and local self-government in Russia, according to them, would be but a dream or a sham. I must confess from what I, as a foreigner, know and saw of the country and people, I very strongly share this conviction. The abolition of serfdom must undoubtedly, as a secondary advantage, largely contribute to the growth of such an independent gentry among the class of landowners ; for he who owns serfs, be he ever so well educated, is neither independent nor a gentleman ; but then neither his authority with the people of his neighbourhood, nor the weight and freedom of movement his wealth imparts to him, must be curtailed. Thus the movement party, for whom these considerations had no meaning, was faced by a resisting party, as far as the noble proprietor's interests and the European stamp of agrarian arrangements were concerned, among the Russians themselves.

The nightmare of an essentially German rule—severe, as is always the rule of a minority, and of a minority of foreign nationality too—having been taken from the country, and the reform of agrarian legislation having, by common consent and the imperial will, been declared to be the first and foremost business of the awakened nation, the older, more sober, and wealthier of the educated Russians cast their looks, in the first instance, in the same way on England as the younger ones

did on France. They saw the soil of England divided into huge lumps of landed property, as huge as their own, but very much better cultivated, and yielding splendid rent. This rent they saw paid by farmers living on farms sometimes of considerable size, in most cases at least of a respectable size, which, however—with the fertility of the soil, the propitious climate, permitting the greatest number of working days in the open air in the whole world, with the dense net of magnificent roads of all kinds, and, above all things, with a town population standing in the relation of two and more to one to the rural population—are equal in agricultural importance to the very considerable Russian estates. They saw these farmers bringing the whole movable capital with them, to an amount per acre quite beyond Russian conceptions, and sometimes even risking a part of their own capital. Thus far a most enviable prospect arose before their view. But then they saw a great number of agricultural labourers, not exactly badly paid, in a great number of counties pretty well paid, in some places, in the south-west, indeed, insufficiently paid, but, there could be no doubt, even where pretty well paid, *not well off*. They could not help seeing the figures of the poor-rate in rural parishes, and then the dwellings and the clothing! The English agricultural labourer's cottage decidedly did not come up, in the majority of cases, to the standard of the block-house of the Russian serf, either in size or in the furniture filling the house. The clothing, cotton and cotton again, or the smock-frock and rude shoes; and in Russia stout linen, woollen cloth, the sheepskin coat, and always excellent boots, almost up to the knee; the food about on a level with that in England, perhaps a little more meat, but less milk, butter, eggs, and river fish; in Russia, good, though coarse, bread in profusion; in England, better and finer bread, but in limited quantity. In England, peas and potatoes; in Russia, little potatoes except for making fat cakes, but, besides peas, grits of buckwheat, a very wholesome food, in great quantities, and lentils and beans. The drink in both cases tea, in Russia always of a superior quality (Congo teas); a great difference only in the beer, which cannot be better than in England, or worse than in Russia. But then to the Russian kwass everybody is as welcome as to water. It is not to be wondered at, when, after all, even many of those Russians who constructed the new era of their state and their social institutions into an

approach to the forms of Western Europe, yet did not quite shut their ears to the insinuations of their countrymen of the doctrine of Slavonian socialism, and from the commencement were ready to let the Mir at least have its trial by the side of other experiments, all the more as it was the existing form in so large a part of the empire, apart from the serfdom, which had merely been superposed on the Mir.

This resolve was naturally strengthened by their eye now falling on the farmers of *small* farms, particularly in Ireland. For the transformation of the serfs into labourers at one stroke had, at an early period, become out of the question. The original product in this quarter had been to transfer to the enfranchised serfs the full property of the block-houses in which they lived, with but a small patch of garden attached to each, without any payment on the part of the peasants, and to leave the proprietor in possession of the whole acreage. Such a settlement, at all events, would have been clear and easy enough, and it was fancied that the gift of personal liberty and a house, without debts, at the same time, would be enough to content the peasants. But the strenuous opposition of the democratic party to such a solution of the problem, the bad grace with which it was received by the Imperial Government, who looked upon the creation of an order of peasant-proprietors, or, at least, of peasant-farmers, as essentially contributing to the stability of the throne, as necessary for the business of recruiting the army, and as a guarantee of an uninterrupted increase of the population, and lastly and principally, the undeniable disinclination of the serfs themselves to part with what they had still considered as a kind, at least, of right of property, in spite of serfdom, and of ever so many personal experiences, which ought to have taught them that they had no such right, had early rendered it impossible. Thus, at least, the transitional transformation of the serfs into small farmers had already become inevitable in the immediate future. But what had been the experience where small individual farms are the rule? Why, abject misery, semi-barbarism, and, before all things, agrarian riots and agrarian crime! Thus, even with *this* party, the revival of the independent "Mir" as *first* form of the new peasant life, from which, as from an embryonic state, higher forms of agrarian organisation were gradually to issue, soon became a settled affair. Their afterthought was, and is, of course, to get rid of it as soon as possible. An

attempt to secure this possibility by a provision which made it optional with the proprietor after the lapse of a certain number of years, to turn the copyhold—which was henceforward to form the legal and original link between the proprietor and the villagers, continuing, as free men, to work in common—into tenure at will, was likewise frustrated by the opposition of the Government. For the reasons indicated above, they had to be content with the provision, as a final compromise between the two opposed parties, that it should be made optional *with the peasants*, either to acquire the freehold of the land allotted to them, by paying a legally settled price for it in instalments, and with the assistance of Government, or to dissolve the Mir.

Thus the whole plan, under the contending influence of opposed ideas as to the future agrarian organisation to be desired, assumed this general shape. The retention of the system of common husbandry by the enfranchised serfs of a village, as the cradle of an estate of peasant-proprietors, created by their own free efforts, by the side of large noble proprietors of land, so that both classes of proprietors will have to show of what stuff they are made.

Events will prove whether the result of this competition between the two systems will be a constantly-increasing peasant-proprietary, owing to further purchases of land effected by the peasantry, or the absorption of property in the hands of the nobles, who will then have to turn it to account by free labour, instead of by the labour of serfs, or by letting their land probably in farms of larger size to the most intelligent and enterprising of the peasant class. The “Mir,” or copyhold, which evidently will retain the weakest part of the peasantry, would serve all the while as a safeguard against the spread of pauperism of the West European character, as a kind of agricultural workhouse under the management of the inmates themselves, but not, as will be seen, without control; a workhouse endowed with a not inconsiderable amount of soil, for which rent is to be paid.

Now as to the main provisions in which this general idea has been embodied.

It is unnecessary to dwell upon that part of the legislation which had for its object to restore personal liberty. The Russian people have thus acquired rights which in Europe are general rights, so far, at least, as they are valid against any private person.

The provisions concerning the partition of the land between the proprietor and the peasants are the first point of interest. The proprietor of a village is bound to hand over to the villagers, in hereditary copyhold against payment of rent, an amount of land, the exact size of which depends on local circumstances, and on friendly agreement between the proprietor and the peasants; but there is a minimum fixed on the male head of the village population. To understand that this was possible, the law revived or rather reinforced by the Emperor Nicholas has to be kept in mind, that no proprietor was to be allowed to sell land without peasants, unless enough was left to the village to amount to $4\frac{1}{2}$ djessatines (about twelve acres) per male head of the population.

But in the same way as a minimum is fixed, a maximum also is fixed. For this purpose European Russia (Finland, the German Baltic provinces, and the kingdom of Poland were not affected by the measure) was divided into three zones: the steppe, the country of the black soil, and the provinces belonging to neither. These three zones were again sub-divided into respectively twelve, eight, and nine districts. In the steppe districts, the minimum and maximum were made to coincide; the legal share on the male head was fixed at three djessatines in the most densely-peopled district, and at eight djessatines in the most thinly-peopled. In the two other zones, the minimum was made to form a third part of the maximum. The maximum, in some cases amounting to seven djessatines, shows the lowest figure in the district in Moscow, where three djessatines were fixed as maximum, and consequently one djessatine—amounting to not quite three acres—was deemed sufficient to form the minimum. The ground built upon, or enclosed as yard or garden, entered into the calculation. The real extent of the grant will have been, in most cases, that of the "Nadel," that is to say, of the land which the peasants had under cultivation for sustaining themselves and their families while serfs.

It was settled that where the Nadel exceeded the new legal maximum, and the proprietor preferred to insist upon the maximum being respected, the land to be transferred from the Nadel to the proprietor's own share was, in the first instance, to be selected from among such land as was not manured, such pasture-land as had not the advantage of being inundated in spring, if possible from wooded land, if such (which, however, was rare) had formed part of the Nadel; and especially it was

to be taken from the parts of the acreage forming the Nadel most distant from the village, or separated from it by the proprietor's own land. Manured land was to be cut off from the Nadel only as far as no land not manured could be found for making up the proprietor's legal share. Pasture-land improved by inundation in spring was not to be cut off at all, except with the consent of the peasants, and even then the proportion of such land to the whole acreage must not be altered. If such pasture-land, for instance, had formed the tenth part of the Nadel, and 100 djessatines were to be taken from the Nadel, not more than ten djessatines of such pasture-land must form part of the land to be cut off. Kitchen gardens, and hop and hemp fields, were likewise not to be transferred from the Nadel to the proprietor's share without the consent of the peasants.

Where the Nadel was *less* than the new legal minimum, the land by which the minimum was to be completed was to be adjacent to the Nadel, and consisting of soil really worth tilling. Only where such soil adjacent to the Nadel was not to be found, or where the proprietor's dwelling was erected and his garden laid out upon it, or where all the adjacent land was manured or inundated, retained before by the proprietor, land *not* adjacent to the Nadel might be taken to make up the minimum. But then, at all events, the land nearest to the village was to be taken for the purpose, and a cattle-path to the village was to be let free, without entering into the account as landed property.

It will be seen from this what precautions were taken to prevent the proprietor from mutilating the self-sustaining completeness of peasant husbandry from the beginning. The animus of those who had the paramount influence in framing the details of the measure is clear; they wanted a stable "Mir," or, if the peasants should prefer to dissolve it, a stable peasantry founded on individual property.

For the first two years a provisional agreement (by way of experiment) was admissible. During the next six years the proprietor, but not the peasant, had the right of insisting upon a definite settlement, the expenses being borne by the proprietor. Minor details, all strictly in keeping with the general spirit of the measure, and whose number and variety is very great, cannot be mentioned here. Great part of them has reference to the different forms of husbandry in use in the different parts of Russia. Others refer to the erection of new

and the pulling down of old houses. Part of them had merely a transitory character.

For the space of nine years after the new regulations had become the law of the land, it was rendered *obligatory* on the peasantry to keep the land in copyhold against payment of rent. Only this much was allowed, that by free agreement between the proprietor and the peasant, on the proposition of the latter, a reduction of the peasant's share to one-half of the maximum, where this at first had been exceeded, could be effected. But this was then to be the definitive size of the peasant's share. It was further allowed, that if the peasants in common should have purchased, in the way which will be described beneath, a part of the land, transferred to them first as copyhold, before the nine years were elapsed, such part not being less than one-third of the maximum, the peasants should have the *right* to renounce retaining the copyhold of the remainder. If, finally, the proprietors should resolve to make a present to the peasants of so much land as formed one-fourth of the maximum, and the peasants should agree to accept it, then, too, the peasants might renounce the remainder in copyhold, even before the obligatory nine years were elapsed.

This, in the interest of arriving as quickly as possible at the establishment of a proprietary peasantry holding common *or* individual property, was rather an ingenious provision, but in form very Russian! First, the peasants are compelled to remain as copyholders, *peasants*, for the space of nine years after they had ceased to be serfs. Thus, it was hoped to get them accustomed to peasant life under freedom, by means of a little coercion, as the only pardonable and transitory remnant of serfdom, namely, the coercion of continuing to till the soil as copyholders instead of as serfs. If they should feel the burden of the compulsory payment of the copyhold-fee too extensive, an escape is left them by their becoming proprietors of a smaller amount of land. And the proprietor of the estate, too, is stimulated to secure to himself a less curtailed estate, by assisting the peasants in becoming freeholders.

Should a decrease of the (male) population of the village take place during the first nine years amounting to at least one-fifth of the whole, and *not* proceeding from peasants emigrating from the village and disconnecting themselves, with the consent of the other villagers—liable each for all and all for each—from their joint liability, but arising from *other* causes, then

the peasants should likewise be entitled to renounce a corresponding part of the copyhold enforced upon them.

Here the disconnection of single peasants from the joint liability, with the consent of the others, in spite of the compulsory nature of the copyhold, demands explaining. The explanation, which consists simply in the condition that the peasant thus liberated must already have become a *peasant-proprietor*, is furnished by another provision of the law, which follows here.

Should, namely, a peasant be the proprietor of at least double of the maximum per head of land, not forming part of the common copyhold, and being situated at no greater distance from the village than 15 versts (10 miles), then he was to be free to renounce to his share in the copyhold, the land which was allotted to him of the common copyhold continuing to form part of it, and he himself continuing a member of the political commune. In such villages where the institution of the Mir was unknown, and the Nadel divided into hereditary lots (in the West, with the Little Russians and Ruthenes), every peasant who should have become the proprietor of land amounting to double the maximum per head, should be entitled to renounce to his hereditary lot in the copyhold in the same way, the lot becoming copyhold of the others *in common*; and also if he had purchased such an amount of land from the proprietor of the estate himself out of the common copyhold land. But in both cases it would be necessary that either the other villagers remaining liable for the whole amount of copyhold rent, and the proprietor of the estate, too, should consent to let him free, or that the proprietor of the estate should renounce to so much copyhold rent as corresponds to the contribution to it of the peasant desirous to quit, or that the peasant pays down the capitalised value of the rent, calculated at 6 per cent., due by him. It is the *law*, only destined to compel the peasants to remain peasants at least for the space of nine years, which has let him off because he has given other security for his remaining true to his order; as far as *private* interests are affected, an agreement *or* payment is still necessary.

The anxious efforts of the Government to make a freehold peasantry proceed from the measure of emancipation of the serfs become here again visible.

After the lapse of nine years—a time now fast approaching—the copyholders with joint liability still left may renounce to

such part of the copyhold land as any one of its members has renounced before. It will only then become more clearly discernible to what extent henceforward landed property of large size, landed property of small size, and copyhold will enter into the agrarian state of the country.

There was one way left for the proprietor of the estate and the peasantry on it agreeing to avail themselves of it—viz., a partition of the land, leaving the whole acreage in the hands of the proprietor, and the houses, kitchen-gardens, and some pasture-land only as copyhold, with option to purchase it, in the hands of the peasants, namely, on an application from both parties to Government to confer upon the village the character of a market town. It appears that there has been little resort to it, or, perhaps, Government has been tardy in lending assistance.

In attempting to prevent as much peasant husbandry as possible from being discontinued the legislature did not forget the emergency of the peasants temporarily failing to meet their liabilities. It was, of course, necessary, in the case of arrears of rent, to place a corresponding amount of land again at the disposal of the proprietor of the estate. But it was provided that during the first nine years, either the joint copyholders, or, where hereditary lots are the custom, any single member of the community, not being himself in arrears with rent, might step into the dormant copyhold right, after every third year's harvest had taken place. After the lapse of the nine years, the right of the peasants to step into quiescent copyhold titles can be exercised but once, three years after the seizure. If it then be not exercised, the land will return definitely to the proprietor of the estate.

The money paid down by peasants resolved to give up their share in the joint copyhold, as capitalisation of their running liability, was ordered to be reserved as guarantee-fund for the combined copyholders discharging their liabilities. But it was made optional with the proprietor of the estate to have the money paid out to himself on his renouncing to the amount of rent thus capitalised.

Now as to the way of fixing *the form* and amount of the compulsory copyhold fee—by far the most difficult part of the whole proceeding.

It was assumed—with what right a foreign observer is unable to say—that a sudden and absolute transition in the form of a compulsory rent from the form of labour to the form of money

was inadmissible, if it was everywhere to be rendered possible for the villagers to discharge their liabilities. It was deemed to the interest of the preservation of an order of peasants as numerous as possible, to acquiesce not merely in a remnant of coercion in general, but even in a remnant of compulsory labour, the law prescribing in lieu of what amount of money it should stand.

In both cases, as well where labour was chosen as the form of the rent, as where money was chosen, the maximum of peasants' land on the male head of the village population was made the legal starting-point of the calculation. The rent due for a share coming up to the maximum was laid down, in the form of labour, as amounting to forty days of man's labour and thirty days of woman's labour. Where the actual share did not come up to the maximum, the amount was to be reduced in proportion. Three-fifths of the days were to be summer days, and two-fifths winter days. For each half summer day in addition to the three-fifths, a winter day falls out. The number of working days due by the whole community of copyholders, during either of the two half-yearly periods, is to be divided by the number of weeks ; and the proprietor of the estate cannot claim more working days in the course of a week than fall within a week. The number of working days falling within a single week is to be divided by three, and on no day of the week can he claim more than a third part. He is, however, entitled to add the odd days of both divisions, but never more than one working day per week, and one working day per day. Two working days of a horse are to be considered equal to one working day of a man. The men discharging the labour incumbent upon the community are to be taken from among the men between 18 and 55 years, and the women from among the women between 17 and 50 years. It is permitted to the peasants to fill their place with a hired labourer.

It will be seen that care has been taken to keep as close as possible in framing the law to the custom which prevailed in the times of serfdom, of the proprietor leaving three days of the week to his serfs, and claiming the other three for himself. He has still his three days per week, only he has far less labourers to dispose of. For, instead of having to claim about one hundred and thirty days, he has to claim but forty, and respectively thirty. This, especially, is what has reduced the value of Russian estates after the abolition of serfdom.

For the rent in money, too, where this form is adopted, does not make up for the working days of the serfs lost by the proprietor, being merely the equivalent of the number of working days now forming the rent of a share. The transition from labour-rent to money-rent was made optional with the peasants, with the whole community, or with every single family—in the sense of the re-partition for tilling purposes of the land by the members of the community among themselves, “tjaglo”—only two years after the law had become valid, and they being not in arrear with working days. Four-fifths of the peasants having effected the transition from labour-rent to money-rent, it was made optional with the proprietor of the estate to compel the remaining fifth. The money-rent, to which the traditional name of every tax on the peasantry, signifying very different things in different times, “obrok,” was preserved, was fixed on the male head of the population, to which the number of shares corresponds, but without exact proportion to the size of the land-share. The situation of the land in the empire was considered of higher importance, as soon as its value was to be expressed in *money*, than either the exact size or the quality of the soil, which, moreover, had been made to compensate each other as much as possible, by the legal maximum of the shares varying with the zones and their districts, and having generally, *cæteris paribus*, been made smaller on more fertile soil. And it was certainly correct political economy, as soon as the money value—the value of *exchange*—of rent was in question, to pay attention to that element in the formation of land-rent which the German Von Thunen, fifty years ago, has discovered and traced with ability, in the distance of land from the market, the place of *exchange*. Consequently it was laid down as law that the “obrok” was to amount for the maximum share at a distance from St. Petersburg of not more than 25 versts (15 miles) to 12 rubles (1 *lst.* 18 *sh.*) on the male head, in the districts of Petersburg, Moscow, Zaroslaw, Wladimir, Nijar-Nowgorod, and close to the banks of the Wolga, to 10 rubles (1 *lst.* 12 *sh.*); in a series of other districts to 9 rubles (1 *lst.* 8 *sh.*); and where the lowest figure was applied, to 8 rubles (1 *lst.* 5 *sh.*). However, to a certain extent, the size of the share for which the “obrok” is to be paid was made to enter the calculation, namely, by the following arrangement. In the first zone, one-half of the maximum “obrok” has to be paid for the first djesatine of the real share, including the space of house and

garden; for the second djessatine one-fourth of the maximum "obrok" is to be paid; and the remaining fourth is to be considered as the equivalent of so much djessatines as the maximum consists of besides the two first djessatines. This leaves but a small part of the "obrok" as representing the rent of such djessatines as the real share may contain less than the maximum, and so much only is taken off from the "obrok." The regulation of the way of calculating the reduction varies a little for the two other zones.

The average maximum share being about 12 acres in size, its rent in the form of labour being set down at seventy working days, made up of male and female, of summer and winter labour, and the average rent in the form of money being 1 *lst.* 8*s.*, it follows that the legislator has estimated the rent of an acre in Russia at 2*s.* 4*d.*, and the wages of agricultural labour at 5*d.* a day.

Both estimates are far from coinciding with the prices actually obtainable in the open market. Wages almost everywhere are much higher, so that it is advantageous to the peasantry to pay the "obrok," instead of working for the proprietor. Land is both much dearer *and* much cheaper. Land under actual tillage by peasants as a rule is dearer; so that such peasants as pay "obrok" have been gainers of wealth by the measure, beside the amount of freedom they have acquired.

There is another "obrok" to be paid by the peasantry for the houses, stables, barns, gardens, improvements on pastureland, &c., in one word, for the fixed capital, which forms part of the copyhold grant. For this purpose four classes of villages were formed. Such as are exclusively devoted to agriculture, and which offer no peculiar advantage to their inhabitants, have to pay 1½ rubles on the male head, such as are carrying on branches of industry, particularly market-gardening, culture of hemp and beet-root for sale, &c., have to pay 2½ rubles; such as enjoy evident local advantages, being situated in the neighbourhood of Petersburg or Moscow, &c., have to pay 3½ rubles; and the fourth class consists of villages whose local advantages are so great—for instance, villages in suburban relation to towns of 20,000 inhabitants and more—that not merely a higher house-obrok but also a higher land-obrok is founded on justice. Here the provincial committee is entrusted with settling the amount of liabilities, a limit being, however, drawn by law.

The "obrok" is to be paid six months in advance, if the proprietor insists upon it. Otherwise an agreement may be come to, which is then binding upon both parties, like the amount of the obrok itself, for the space of twenty years, after the lapse of which a new arrangement may take place. The obrok is collected in the same way as the public taxes, by the elected functionaries of the local self-government. The promise of the Government was to enforce it with all possible rigour.

The most important, however, of the main provisions of the Act of 1861 is that which refers to the *right* of the peasants to purchase the copyhold on which they are living. They were *compelled* to accept the copyhold ; but, in compensation, the proprietor of the estate is *compelled* to accept their money, if they are able and willing to buy either each his own share, dissolving the community, or together the whole of the grant, continuing the community. The legal price is 16 $\frac{3}{4}$ -fold the amount of the "obrok." They are entitled to purchase the farm-yard alone or together with the land. The "obrok" for the one, as has been seen, being separated from the "obrok" for the other. This option left to them has been the subject of much controversy. The proprietors would have preferred to see the whole village do either the one or the other. Where the community is not dissolved, and not inclined to purchase the land in common, each single peasant may yet assert his right of purchasing his own share, but on condition that he pays one-fifth more than the purchase-money otherwise would amount to.

Government has undertaken to assist the peasantry in purchasing the land, by advancing, on the security of the "obrok" collected by their agents, part of the necessary sum, amounting to four-fifths where the whole grant is purchased, and to three-quarters where a part of it of certain size is purchased, in form of bonds of the Imperial Bank, bearing five per cent. interest, or titles to rent, guaranteed by Government, which afterwards are to be taken in exchange for such bonds of the bank. They are to be paid over at once to the proprietor of the estate or to his creditors. Only such peasants, of course, can receive the benefit of governmental assistance who have already turned the labour-rent into "obrok." But Government, always in the interest of securing the existence of a numerous order of peasants, has placed another condition on their assistance. The purchase-money is only advanced in behalf of such peasants

as consent to purchase the dwelling-houses and farm-yards *with* the land. This also will tend to lessen the number of cases—apprehended by the proprietors—of a part of the peasants in a village purchasing the houses and farm-yards *with* the land, and a part *without* it.

As yet it is impossible to judge of the full practical bearing of this great agrarian reform among one of the most numerous and influential nations of the earth, holding in possession such an immense territory. A considerable number of peasant-proprietors, partly individuals, partly communities, have already sprung up. In my opinion the difference between single and common property is greater, and of greater importance than that between freehold and copyhold. Should the “Mir” prevail, colonisation undoubtedly will be favoured by it, as it was in olden times, and as seems to have been the case thousands of years ago in China, where the most populous nation of the earth has derived its strength in colonisation from similar agrarian institutions. But interior social progress will be weak, as it always has been in Russia, and as it has been in China. And the country will continue to be in danger of despotic political and social institutions. For nations who are in the habit of sacrificing so much of their individuality as to become, in their daily life, the slaves of a majority, are always at but one step’s distance from becoming the slaves of a master. Had the ancient Russian villages not been communists, they would not have become slaves; not the law, but their individual weakness, which knew not how to resist the abuse of the law, has cost them their liberty.

From the little I have seen of the Russian peasants, I do *not* think that the Mir will continue for any length of time to be popular with them. I have a presentiment that they will shortly and strongly disavow by their acts that they are what the philosophers who pretend to speak in their name represent them to be. I fancy that I have discovered very great resemblances between them and the peasantry, of mixed German and Sclavonic blood, in the eastern provinces of my own country—Prussia. If I am right in this, then anything rather than communistic habits and leanings are to be expected from them as free men; and I hope it will be so, in the general interest of civilised humanity.

VII.

THE AGRARIAN LEGISLATION OF PRUSSIA
DURING THE PRESENT CENTURY.

BY R. B. D. MORIER, C.B.

IN treating of the agrarian legislation of Prussia during the present century, it is important to guard against a prevalent misconception, to the effect that this legislation is something "sui generis," and different in kind from that of any other European State. The contrary is the case—legislation similar to that we are about to describe has in some form or other marked the history of every German State during the last sixty years, and analogous legislation has marked our own history, and, we may add, that of every other State of Teutonic origin.

For every Teutonic community has been evolved out of a germ identical in its rudimental construction with that of every other, and therefore containing within itself the laws of a similar growth. The history of this growth is recorded in the history of the occupation of land; for, in contradistinction to the *citizens* of the antique world, the Teutonic race is essentially a race of *landfolk*.

I. The original Teutonic community is an association of free-men, a "Gemeinde," a commonalty or commons (not common people in contradistinction to uncommon people, that is, a privileged class, but a body of men having property in common), amongst whom the private right of property in land is correlative to the public duty of military service and participation in the judicial and other political acts of the community. These public duties are of a comparatively simple kind; the agricultural relations of the community, on the other hand, are of a comparatively complicated kind. The district, or Mark (*i.e.*, the geographical area *marked* out and appropriated by the community), consists of three distinct parts: first, the *Common*

Mark (the Folcland of the Anglo-Saxons), owned jointly by the community ; secondly, the *Arable Mark* (Feldmark), cut out of the Common Mark, and apportioned in equal lots to the members of the community (the Anglo-Saxon Boc land) ; and, lastly, the *Mark of the township* (Dorf, thorp, villa), also divided into equal lots, and individually appropriated.

The individual marksman, therefore, stands in a threefold relation to the land occupied by the Gemeinde. He is a joint proprietor of the common land ; he is an allottee in the arable mark, and he is a householder in the township. In the first case he owns "de indiviso," and his rights are strictly controlled by those of his co-marksmen. His cattle grazes on the common pasture, under the charge of the common herdsman ; he hews wood in the forest under the control of a communal officer.

In the Arable Mark he has a distinct inheritance, and can call a certain number of square roods his own ; but he must cultivate his lot in concert with his associates, and the community at large determines on the mode of its cultivation. The whole mark is divided into as many parts or *Fields* ("Fluren") "Campi") as the rotation of crops and the alternation between fallow and plough requires. Usually into three such "commonable" *Fields*, each *Field* lying fallow once in three years, the community having rights of pasturage on the fallow as well as on the stubbles of the land under the plough.* To obviate the possibility of the individual allottee finding himself every third year without any land under cultivation, which would be the case if the lots lay in undivided blocks, each lot is distributed in single parcels over the three *Fields* of the arable mark, a subdivision which renders cultivation in common still more necessary.

In the Common Mark, therefore, *and in the Arable Mark*, the individual is everywhere controlled by his peers, and by the minute customs and usages of the community ; he is contained by and tethered to the association. In his dwelling-house and

* It is these common rights of pasturage on the *Arable Mark* which it is of importance to note, for it was from these rights, and not from the right of pasturage on the *common pasture*, that mediæval agriculture derived its distinctive character. The obligatory cultivation on the "Three Field system," the *common temporary* enclosure of the commonable Field (not of the individual parcel), whilst the crop is growing, the removal of that enclosure after harvest, the prohibition against *permanent* and *individual* enclosures, are all of them results which flowed from the common right of pasture on the *fallow* and *stubbles*.

its appurtenances the reverse is the case. Here he is absolute lord and master. His fenced-in court-house or manor (*curtis*, *hof*, *mansus*, *manoir*, *manor*) is in the fullest sense his "own" (*eigen*). Over his family, over the dependents ("Hörige"—"*liti*") and slaves (*servi*) domiciled within it he can dispose as seems good to him. To them he is a lawgiver and a law-enforcer. Within his pale (*septum*) neither public nor communal officer can enter otherwise than with his sanction. It lies outside the community, and constitutes an "immunity"—"*immunity*" and "*community*" thus come to be opposed to each other. "*Immunitas est quod non communitas, immunitas quod non communis.*" In the eleventh century this is still the rule applicable universally to the homestead of every freeman. "*Omnis domus, omnis area pacem infra septa sua habeat firmam. Nullus invadat, nullus effringat, nullus infra positos temere inquirere, aut violenter opprimere præsumat. Si fugiens aliquis septum intraverit securus inibi sit.*"* In the familiar saying, "Every Englishman's house is his castle," we have a distant echo from those far-off times.

These two distinct aspects of the early Teutonic freeman as a "lord" and a "commoner" united in the same person—the one when within the pale of his homestead, the other when standing outside that pale in the economy of the Mark—should not be lost sight of. In them are reflected the two salient characteristics of the Teutonic race, its spirit of individuality, and its spirit of association; and as the action and reaction upon each other of these two laws have determined the social and political history of the race, so, as the sequel will show, they have in an especial manner affected and determined its agricultural history.

Lastly, we should note a strange peculiarity apparently dating back to this period—viz.; that the personal "status" of the occupant communicates itself to the walls of his domicile, and, as it were, adheres to them, sometimes reacting back upon the new occupant, and determining *his* status. The occupier privileges the manor occupied by him, and the manor thus privileged invests the latter occupier with those privileges. In the same way the servile tenement renders the occupier servile.

This is the first period of the Teutonic community. Its characteristic features are, that there are two distinct communi-

* *Juramentum pacis circa an. 1085*, quoted in v. Maurer's "*Einleitung zur Geschichte der Mark, Hof, Dorf und Stadt Verfassung*," p. 241.

ties—an *agricultural* community and a *political* community—inseparably identified with each other, the rights conferred by the one being correlative to the duties imposed by the other.

We may describe it as the period of *land-ownership* and *equal possession*, in which the freeman is a "miles" in virtue of being a *land-owner*.*

II. The second period can be described as the period of *land tenure*, and of *unequal possession*, in which the feudal tenant is not a "miles" in virtue of being a *land-owner*, but a *land-holder* in virtue of being a "miles."

The transition from the one state to the other is necessarily influenced by a great variety of circumstances in the different communities; but there are certain features connected with this transition common to all the communities.

1. Inter-tribal wars, the consequent subjugation of other communities, the appropriation of the land in the common marks of those communities, the unequal division of the lands so appropriated according to the amount of fighting work done by the associates, are among the earliest and most effective causes which break up the original equality of property, and lead to the accumulation of wealth in a few hands. The fines paid as blood-money (Wergeld) in accordance with a criminal system entirely based on fines, appears as another important cause leading to the same results.

2. The cessation of the political independence of the individual community, without, however, as yet a cessation of the political functions of the members of the community. This process takes place in two ways, first, by the gradual colonisation of the *Common Mark* by communities sent forth from the original townships, in which case each new township receives an *Arable Mark* cut out from the *Common Mark*, but

* For the history of the constitution of the Mark we refer our readers to the numerous works of Ludwig George von Maurer. It would be impossible to cite our authorities for the statements made in the text in detail, for we have given the barest outline of a vast amount of learned investigation. The main features of the constitution of the Mark may be considered as having been now fairly won back to the domain of history, thanks to the labours of Maurer and many others, over the entire area of the primitive Teutonic settlements in Germany and Scandinavia.

It may seem pedantic, in treating of legislation in the nineteenth century, to go back to the institutions of the first century, but the agricultural features of the early Teutonic community have so indelibly engraved themselves on the entire subsequent history of Teutonic agriculture, especially in Germany (as any one who has seen the map of a German Gemeinde can testify), that we have found it impossible to dispense with this introduction.

the *common mark* itself continues to be owned "de indiviso" by all the townships; secondly, by the agglomeration of a number of marks into a loose kind of confederacy, which, by degrees, assumes a greater consistency, and becomes in time a national unity.

In both cases the several communities retain in their own hands the management of the affairs of their own township, but national affairs are transacted in general assemblies. In both cases, however—and this is a point which it is of importance to note—a sort of embryo suzerainty or over-lordship is claimed, in the one case by one or other of the more important marks of which the confederacy is composed; in the other case by the original or mother township (*Mutter Dorf*), as it was termed, over the daughter townships.

3. The establishment of permanent executive organs, and the gradual hereditariness of the executive office. Hitherto, the assembly of the community has been all in all. In case of war, it elected a chief, a king or Herzog, whose attributes were purely military, and ceased when peace was concluded. When the assembly sat as a court to try civil or criminal cases, it likewise elected its president. From the earliest times, however, in both cases, the choice appears to have been limited to a certain number of families, who, in some especial manner, represented the blood of the tribe, and little by little, though the forms of election continue, office becomes practically hereditary. How this rule obtained in the case of the Anglo-Saxon and Frankish kings is well known; but it is necessary to note that this tendency is universal throughout the Teutonic Kosmos, and applies to all its institutions. Thus, as the king of the nation is "de jure" elective, "de facto" hereditary, so also is the president of the court of the township, the judge or *Schultheiss*, he who apportions unto a man his debt or guilt—*i.e.*, who fixes and exacts the Wergeld. This is a matter of extreme importance, as it is to the hereditariness of this office and its identification with one particular manor in each township, so that whosoever owns the manor exercises the office, and whoever exercises the office owns the manor, that we apparently owe the origin of the manorial rights which afterwards become the key-stone of the entire land system in feudal times, and to this day affect in an important manner the agrarian relations of many important countries in Europe, England included. Our space does not admit of our entering upon this subject here,

and it must therefore suffice to say that from the earliest times known to us—and we are now speaking of times antecedent to the establishment of the feudal system—we note in every Teutonic township one manor (Hof), which thus becomes par excellence *the* manor, raised above its fellows. This manor, afterwards variously described as the “Salhof,” “Frohnhof,” “curtis dominicalis,” “curtis judicialis,” “curia publica quæ dicitur Frohnhof,” receives dues and services from the other manors in the township, *even where these manors are the allodial property of freemen*. That these dues and services were of the nature of public charges, and at a time when all payments were made in kind represented the emoluments of the principal executive officer of the township seems now established beyond a doubt.*

The foregoing indications will suffice to point out the predisposing causes in the pure Teutonic society which led when that society came to conquer the Roman world to the establishment of the feudal system, a system made up of Teutonic and Roman elements—viz., on the one hand of the Teutonic idea of the correlation between possession of land and military service, of the Teutonic tendency to change public office into private right, and to transmit such rights by inheritance; lastly, of the Teutonic peculiarity of regarding “unfree” service rendered personally to the sovereign as in its nature honourable, though involving political disabilities (Thaneship, Dienstmansschaft, Hörigkeit, Ministerialität);† and, on the other hand, of the ideas of the Roman law regarding “beneficial uses,” the difference between “possession” and “dominium,” as well as the Roman practice connected with the agricultural colonisation of the provinces.

The application of the *feudal*‡ system in Germany was necessarily a much slower process than in the Roman provinces, where it was, as it were, called into life by the exigencies of conquest. In the one case the raw material that it had to work up consisted of free *allodial*‡ proprietors, who deemed

* Confer Landau Der Salhof, do. Die Territorien.

† Confer Freeman's account of Thaneship in his “History of the Norman Conquest.”

‡ The etymology of *alodium* and *feodum* throws great light on the entire question of “ownership” versus “tenure.”

The syllable *od*, in old High German *ôt*, in Anglo-Saxon *ead*, signifying “possession,” “wealth,” “treasure,” is common to both.

Allod, *alodium*, or, in its earliest form, *alods* and *alaudes*, is that which is altogether my possession, or possession in all its fulness.

[Compare *kleinod*, a jewel, i.e., a small possession, or rather a possession

themselves the equals of the king, and whose personal status was legally higher than that of his proudest *Dienstmannen*; in the latter case it consisted principally of conquered Romans and Provincials, who were glad to get back their lands on any terms.

In Germany, therefore, it was an economical necessity rather than a political convulsion which brought about the change. As population increased, more and more townships were settled on the common lands, the proportion between pastoral as compared with agricultural wealth decreased; and the ordinary freeman was gradually reduced to little more than what his lot in the arable mark brought him in. Simultaneously with this diminution of his means rose the cost of his equipment for the field; and the strain put upon his resources by having to maintain himself during the long summer and winter campaigns which were now the rule. Soldiering under Charlemagne against the Saracens in Spain, or the Huns on the Danube, was different work from an autumn raid across the Rhine, after the harvest was got in. Accordingly, as early as Dagobert's time, we find the possession of five allotments to be the minimum qualification required for a fully-armed "miles."

Hence, partly by his poverty, partly by the pressure, often amounting to force, brought to bear upon him by the lords who wished to increase their demesne lands, the free owner was little by little reduced to the condition of an unfree holder.

dear to me, the diminutive being used to express endearment, as in the exactly analogous case of jewel, French *joyau*, *i.e.*, *gaudiculum*, a little joy.]

Feodum, if derived from Old High German *fihu* (modern German, Vieh), cattle, and *od*, possession, meant originally possession in cattle.

The early Teuton's land—*i.e.*, his lot in the Arable Mark and in the township, is altogether his own: it is possession in all its fulness. When he becomes acquainted with Roman "beneficial" possession, as distinct from "dominium," he expresses it by a distinction drawn between the land itself and the wealth which is on the land, and derived from the land, but separable from it—*viz.*, cattle (which, as in the English word *chattel*, becomes in time synonymous with movable as distinct from immovable property). Thus the idea of *usufruct* comes to be translated by the idea *cattle possession*.

This original conception of *feodum* remains the same, even if, with Diez, we have to consider *feodum* as derived directly from Pro: *feu*, Italian *fo*, *i.e.*, Old High German, *fihu*, and look upon the *d* as inserted for the sake of euphony, as in *ladico* for *laico*, instead of seeing in it a remnant of the Old High German *ôz*.

The idea of allodial ownership was lost in England from the moment the whole of the soil came to be regarded as a demesne of the Crown, the only allodial owner left being the sovereign. For the etymologies in this Note we are indebted to Professor Max Müller.

By "commending" himself ("comendatio," "traditio") to a superior lord, that is, by surrendering the "Dominium directum" of his "allodium" and receiving back its "dominium utile," the freeman lost his personal rights, but obtained in return protection against the State—*i.e.*, against the public claims that could be made upon him in virtue of his being a full member of the political community. According to the nature of his tenure, he had to render military service (no longer as a national duty but as a personal debt) to his superior, and in return was maintained by his lord when in the field; or, if his tenure was a purely agricultural one—and it is with these we are concerned—he was exempt from military service, and only rendered agricultural service.

In this way, as generation followed upon generation, the small free allodial owners disappeared, and were replaced by unfree holders. But the memory of their first estate long lived amongst the traditions of the German peasantry, and it required centuries before the free communities, who, out of dire necessity, had, by an act of their own, surrendered their liberties into the hands of the lords of the manor, sank to the level of the servile class settled upon their demesnes proper by the lords of the soil. The glimpses we obtain of the Bauer in the 12th and 13th centuries* exhibit him to us as still a jovial high-handed fellow, who holds his own with the folk from the castle, and is quick at retort both with his cudgel and his tongue.

In the peasants' war which followed on the Reformation, he made a desperate attempt to recover his lost liberties; and in the record of grievances upon the basis of which he was ready to treat, he showed how accurate was his recollection of the past, and how well he knew the points on which the territorial lords had robbed him of his just rights.

The Thirty Years' War gave the final blow. With exceptions here and there the tillers of the soil became a half servile caste, and were more and more estranged from the rest of the community, until, with the humanitarian revival at the close of last century, they became to philanthropists objects of the same kind of interest and inquiry which negroes have been to the same class of persons in our day.

Before we leave this second period we must allow ourselves a general observation, which is of importance both as regards this period and the next.

* Cfr. Freitag "Neue Bilder aus dem Leben des deutschen Volks," cap. "Aus dem Leben des deutschen Bauers."

We described the earliest form of the Teutonic community as the union between an agricultural and a political community.

The second period is marked by the divorce between these two bodies. This divorce is accomplished when the power of the king has fully established itself, the result as regards Germany of the conquest of the Roman provinces, and the foundation of the Frankish monarchy. Instead of the self-administered marks of a former age, the ancient "Gau" now become "Gau Grafschaften"—*i.e.*, counties governed by the "comites" of the king with a hierarchy of subordinate officials, "Vice comites," "Centgrafen" (Counts of the Hundred), &c. For a short while there is a real revival of the Roman Empire, and the structure which the genius of Charlemagne builds up and superposes over the Teutonic as well as over the Latin foundations of his monarchy, simple as are its classic outlines, contains all the appurtenances required for the government of a great centralised commonwealth.

After his death the structure, it is true, remains standing, and its external outlines can still be descried, but, shooting upward from the ground and sideways from every nook and crevice, the vigorous Teutonic vegetation, whose luxurious growth even the original architect had scarcely been able to restrain, spreads over the building and produces that marvellous but not unpicturesque monstrosity known as the Holy Roman Empire.

The Teutonising of the Roman forms of administration was effected by a process precisely similar to that which had obtained in regard to the executive offices in the old free community. It was the same inveterate Teutonic tendency to treat public office as private property, and, therefore, as something that could be transmitted by inheritance, a hereditament, which ruled in the one case and the other. Thus, as the office of king and Herzog, from being elective had become hereditary, so the Gau Graf, from being a prefect named by the Emperor to exercise royal prerogatives in his name, becomes a hereditary subregulus; the royal authority is decentralised, and the royal prerogative adscripted to the glebe, or rather identified with the person who is lord of the glebe. In the same way that the great territorial lords gradually possess themselves of the rights of the Gau Graf and transmit them to their posterity as part of their real estate, the lesser lords possess themselves of the attributes of the Cent-Graf, and so on down to the owners of *the* manor in the township. Now each of these offices, from the highest to the

lowest, represents a jurisdiction, and each of these jurisdictions therefore comes to be identified with the possession of real estate. Consequently, in the frightful chaos which resulted out of the feudal system, we have, nevertheless, got a clue which enables us to unravel many difficulties. The idea of dominion, the rights of the "dominus" (Frohnherr, lord), are made up of public and private ingredients, but in inverse proportions to what they were in the first period. It is the turning topsyturvy of the ancient principle. Then private rights imposed public duties ; now public duties breed private rights.

When the system has once been firmly established, it is easy to note the different relation in which the community, the larger community of the mark as well as the smaller community of the township, comes to be placed in towards its executive officers. For a long period after the community has, by the consolidation of the kingly authority, ceased to be a political community in the sense of an independent and international unit, it continues in the assembly of the hundred to administer its own affairs, and to sit as a civil and criminal court. During this intermediate stage the sovereign authority is still as it were emanating from below, and therefore the only jurisdiction to which freemen have to submit is to that of their own peers. The president of the court is one of themselves, and in so far as he exercises executive authority, it is authority delegated by them.

With the establishment of the feudal system, the sovereign authority begins to flow from the contrary direction ; it comes now from above, and no longer from below ; it is delegated by the king, and no longer by the commons. The owner of the manor now no longer exercises his functions as "primus inter pares ;" he has obtained a jurisdiction over his former peers, and has become invested with a "dominium." From henceforth the township is administered partly as a political unit, partly as a private demesne, from the manor house. Public and private rights, public and private dues, get mixed up in inextricable confusion.

The divorce between the agricultural and the political community even in regard to local affairs (except in the most limited sense) is complete ; but the point which it is important to note is, that the agricultural community in Germany remains intact. The "Bauern Gemeinde" of the 19th century is in its essential points the microcosmic reproduction of the "Landes Gemeinde" of the 1st century, apart from the political rights and the culti-

vation in common. It is a corporation of free, allodial owners, who are allottees in an arable mark, and co-partners in common lands. It is an administrative unit, managing its own private affairs, like any other body corporate, with some slight remnants of a jurisdiction which in Prussia is still exercised under the surveillance of the manor.

It is at this point that the agricultural history of England and Germany part asunder. In England the agricultural community, though traces of it are to be found much later than is generally supposed, traces which may even to this day be deciphered, from a very early period ceases to be conterminous with the self-governing body. Not the agricultural, but the ecclesiastical community, the parish, becomes with us the administrative unit, and the lord of the manor, except in regard of the freeholders who make up the court baron, finds himself face to face, not with a compact association and a recognised corporation, but with isolated individuals.

III. We have now arrived at the third and last period. It is that with which we have to deal in treating of the agrarian legislation of Prussia during the present century. It is marked by the demolition of the feudal edifice, and the removal of the materials of which it was built. *It can be described as the return to free ownership with unequal possession.*

The three principal incidents of the process can be classed as follows :—

1. Abolition of villeinage in so far as it affects the personal "status" of the villein.
2. Abolition of villein and other feudal tenures, and substitution in lieu thereof of allodial ownership.
3. Removal from the land thus allodially owned of all charges, whether of a public or private character, derived from the feudal forms of tenure and from the feudal organisation of society.

The three great efforts made by the legislation of Prussia in 1807, in 1811, and 1850, respectively correspond to these three incidents.

From this it will be abundantly manifest that a similar process of legislation has marked the history of every State in which the feudal system has been established.

In England personal villeinage dies out at a comparatively early date, we hardly know how, so noiselessly does it disappear.

In the same noiseless way villein tenure loses its servile incidents and assumes the form of copyhold tenure, which tenure can by 15 and 16 Vict. c. 51 be commuted into freehold tenure at the instance of the lord of the manor or of the copyholder. By the statute 12 Car. II. c. 24 all forms of freehold tenure were practically reduced to the simple one of tenure by common socage.*

It is not in any way our purpose, by calling attention to these analogies, to detract from the merits of the so-called Stein Hardenberg legislation. Those merits are of a transcendent kind, but it is to the accidents that accompanied the legislation, to the scale on which the measures were framed, to the spirit in which they were carried out, and not to the novelty of the legislation, that those merits belong.†

* For all practical purposes tenure by common socage is as good as allodial ownership, and therefore the statute of Charles II., taken in combination with the statutes of the present reign, enabling the transmutation of copyhold into freehold tenures, must be considered as the English equivalent of what we have described as the second main incident of the Prussian agrarian legislation. For the purpose, however, of strict accuracy, it should be noted that in England, and in England alone, the feudal structure of society still exists on the statute book, with the further exceptional circumstance that the sovereign is lord paramount, and therefore, strictly speaking, the only real landowner. all his subjects being only tenants. Hence the inveterate use of the terms *freehold tenure*, and *freeholder*, when the idea intended to be conveyed is that of *allodial ownership*.

† We have felt it the more necessary to insist upon these points because, in a celebrated passage of a celebrated speech, Mr. Bright gives thereceived erroneous English account of the Prussian legislation in question. We most heartily sympathise with the object which Mr. Bright has in view, viz., the numerical increase of the landowning class in Ireland. No one can have lived abroad during the last twenty years without convincing himself that, in the present transition state of society, it is of vital importance that its one permanent conservative force, viz., landownership, should be so distributed as to exercise its steady and restraining influence over a large area instead of a small area, over all classes instead of over one class. It is therefore with the greater regret that we notice the inaccuracy in question; but where so important a precedent is invoked on so important a matter, and by so great an authority, it appears to us of real moment that it should be correctly stated.

Mr. Bright is reported to have said: "If in this country fifty years ago, as in Prussia, there had arisen statesmen who would have taken one-third or one-half the land from the landowners of Ireland, and made it over to their tenants, I believe that the Irish landowner, great as would have been the injustice of which he might have complained, would, in all probability, have been richer and happier than he has been."

Now what the statesmen did in Prussia fifty, or rather sixty, years ago, was just the reverse. They took half or a third of the land possessed by the tenants of Prussia, and handed it over in full possession to the landlords of Prussia. The land occupied by these tenants was land on which, *except in case of devastation and in virtue of a judgment passed by a Court of Law*, the lord of the manor had no right of re-entry. What the law of 1811 did was to force

The Legislation of 1807.

In order to estimate what were the changes practically effected by the decree of 9th October, 1807, it is necessary to realise what was the state of things which that decree was intended to supersede.

At the period in question the entire land of Prussia (then, it must be remembered, consisting of the few provinces left to the King of Prussia by the Peace of Tilsit) was distributed amongst three classes of society, carefully kept asunder, not by usage only, but by strict legal enactment—nobles, peasants, and burghers. In other words, it was held by knight's tenure, villein tenure, and a sort of civil tenure which had grown up out of the privileges of town municipalities. These classes were distinct castes—their personal status was reflected in the land held by them, and conversely the land held determined the status of the holder. The noble could follow no avocations but those of his caste. He could administer his estate, and serve the king either in a civil or military capacity. He could not occupy himself with trades or industries. He could acquire nobles' land, and therewith manorial rights over land held under villein tenure; but he could not acquire burgher land or the "dominium utile"—*i.e.*, the possession of peasant land.

The burgher had a monopoly of trades and industries, which, with some very limited exceptions, such as the business of wheelwrights and smiths, were confined to the towns, and

the lord of the manor to sell his manorial overlordship to the copyholder for one-half, or one-third, of the copyhold. By this process he was put in possession of more land than he was possessed of before. What he was deprived of was labour. The tenant lost one-half or one-third of the land he possessed before, but obtained the "dominium directum," as well as the "dominium utile," over the remaining half or two-thirds; what was, however, much more important, he got back the free use of his own labour. The landlord sold labour and bought land; the tenant sold land and bought labour. All the essential features of the transaction would have remained the same even if the "dominium directum" of the landlord had not been passed over to the peasant, for an overlordship of this kind deprived of its material contents would have been a mere meaningless form, like the *dominium eminens* of the Crown in England. There was no injustice done of the kind supposed by Mr. Bright, any more than the Act 15 and 16 Vict. c. 51 creates an injustice by compelling the lord of the manor to sell his copyhold rights to the copyholder. The only difference between the two transactions consists in the payment, in the one case being made in money, and in having, in the other, been made in land. One-half and one-third was a rough-and-ready calculation by which, in all probability, the lords of the manor, in some cases, got more than their share, the peasants less, and *vice versâ*.

could not be exercised in the country. He could not acquire nobles' land or peasants' land. The military profession was closed to him as well as the higher civil employments.

The condition of the peasant differed widely in the different provinces, and in the different parts of the same province. It was a mirror in which almost every phase of mediæval history was reflected. There was this feature, however, common to all peasant holdings—that they were not isolated farms, but united in a "commonalty," and that these "commonalties" stood under the jurisdiction of the manor.

The rural area of Prussia was consequently divided into two kinds of districts. The Gutsbezirk, or manorial district proper, consisting of the demesne lands, cultivated by the manorial proprietor, and in which he exercised the functions of a police magistrate directly; and the township of the peasant community, with its arable mark and its common mark, in which a Schulze (contracted from Schultheiss),* usually an hereditary office, or one inseparable from a particular Hof, exercised the police authority in the name of and under the supervision and control of the lord of the manor. The community likewise managed its private affairs like any other corporation, but also under the guardianship of the manor.

The different communities held by different kinds of tenure—varying in an ascending scale from those in which the allottees were in a state of personal villeinage with unlimited services to those in which they were free settlers, who, though under the jurisdiction of the manor, and paying dues to it in virtue of that jurisdiction, were yet owners of their lots. These distinctions generally may be traced to the original difference in the nature of the land held, adverted to in the first part of this essay. In the one case, the communities had originally been slave communities, settled upon the demesne lands proper of large proprietors, and had gradually emerged to the comparatively higher level of villeinage—or they were communities of freemen or dependents, "liti," settled in the same way, who had gradually sunk to a state of villeinage. In the other case, they were originally the allodial owners of the land held by them who had surrendered their rights of full ownership to the manorial lords on distinct stipulations, or they had retained the ownership of their land, and were only subject to the jurisdiction of the manor.

* See *supra*, p. 284.

But there was another distinct class peculiar to Prussia, who owed their origin to the fact that the German race was in these parts a conquering race, and settled upon territory taken from another race. These were the free colonists colonised "more Teutonico," principally on the demesne land of the Crown. Contractors, termed "locatores," obtained grants of land, and brought with them, chiefly from Holland, communities of agriculturists, who, according to the old system of the mark, received their individual lots and likewise rights of coproprietorship in a certain amount of common lands. The contractor received a larger grant, free of services and dues, and was infeoffed in the office of Schulze. The colonists received their grants for ever, and were only bound to pay fixed and moderate dues in kind or money. These tenures may be considered as ready-made copyholds. The "tenants" were to all intents and purposes freeholders, with only a kind of shadowy "dominium directum" in the background.

The status of villeinage differed according as the villein was Leibeigen (*i.e.*, as his lord had rights of property in his body), or only "erbunterthänig," *i.e.*, in a state of hereditary subjection to the manor, "adscripti glebæ."

In its worst form the villein could be held to unlimited service, and could be deprived of his holding, and located in another. At his death, the whole or the largest portion of his personal estate fell to the lord. His children could not marry without the lord's consent, and could be kept an unlimited number of years as personal servants (Gesinde) in the service of the manor. He could receive corporal punishment to heighten his productive power and to enforce respect, but his life was protected.

This extreme form was, however, the exception to the rule. It occurred mostly in the more remote provinces.* The milder form differed from the former in the services to be performed and the dues to be paid, being limited by local custom, and in a greater freedom in the disposal of the holding. The villein knew what work he and his team would have to perform in the course of the year, the number of years

* Stringent legislative enactments had been passed by Frederick the Great, regulating the personal "status" of the villein, and limiting the rights of his lord; but usage was stronger than law, and the greatest diversity in the "status" of the villein in the different parts of the monarchy is a characteristic feature of the agricultural system of Prussia at the commencement of the century.

his children would have to serve in the household of the lord, the tax he would have to pay on their marriage, the amount of the mortuary dues which at his death the lord would have a right to. He could also buy his freedom at a fixed price, and, with the permission of his lord, dispose of his holding.

The free peasant differed from the villein in having no personal dues to pay, and in his services and dues being usually recorded in writing in the grants made to him, and therefore bearing the character of a legal contract. He could not, however, acquire by purchase or inheritance other than peasant land, nor could he change his position by changing his country life for a city life; nor could he in the country exercise any trade or calling but that of agriculture.

The land cultivated by the peasant therefore was divided into two principal categories :

1. That in which he had rights of property ;
2. That in which he had only rights of usufruction.

In both cases services were rendered, and dues were paid in kind or money to the manor. But in the first case these services and dues may be considered as having had a public, in the latter case a private, origin.

As regards the land in which the peasant had only rights of usufruction, it was divided into two principal categories :

1. Land in which the peasant had hereditary rights of usufruction, and could transmit his holding to his descendants and his collaterals, according to the common law of inheritance ;
2. Land in which the occupier was only a tenant for life, or for a term of years, or at will.

In neither case, however, could the landlord re-enter on this land. The lords of the manor had been deprived of this right,* if it ever existed, by various edicts of the former

* No point connected with the mediæval history of land tenure presents more difficulties than this question of what the manorial right of *Overlordship* really amounted to, and whether or not it invested the lord with a right to possess himself with the tenant's land. Wherever in the Teutonic Kosmos we meet with a manor and dependent "mansi," we are encountered by this difficulty and by the difference between the "terra tenentium" and the "*dominium villenagium*," tenant land and *demesne* land. If the description of the origin of manorial rights given in the early part of this essay is correct, it would follow that what in feudal language are called "tenants" were except in the case of servile townships settled on the lord's "allodium") originally allodial owners, whose dues and services to the manor were of the nature of public taxes, which could not invest the lord with rights of property over the lands of the proprietors. It is, however, certain that with the estab-

Hohenzollern kings. Frederick the Great imposed a fine of a hundred ducats on any landlord who appropriated to his own use any land held by his peasants. At last a general law was passed on the subject. (Allgemeines Land Recht II. 7, §§ 14—16.)

The manors were respectively held by the Crown, by corporations, lay and ecclesiastical, and by individual nobles. But whoever was the occupant, the functions of the manor in the body politic remained the same. The term implied a house with farm buildings (*the* manor in the community, the *other* manors having sunk to *mansi*, "messuages"): demesne lands cultivated by the labour of the peasants under its jurisdiction: rights of various kinds over the persons of these peasants and the lands occupied by them: correlative duties in the way of maintaining paupers, furnishing wood for the building and repair of the peasants' farm-buildings, in some cases furnishing the stock of the farm, the building and endowing schools, the repairing of churches, &c.: and, lastly, a police magistracy, and a court of first instance in civil and criminal matters, the so-called "Patrimonial Gerichtsbarkeit" (courtleet and customary court). It *did not* imply the right of re-entry on the lands occupied by the peasants.

The judicial functions were not exercised by the lord of the manor in person, but by his steward, who required to be a properly-trained lawyer.

Where the manor was the property of the Crown, or of a corporation, the rights of the manor were exercised by a bailiff.

With the establishment of the feudal system this original character was lost sight of, and that the lords universally claimed the right to possess themselves of tenant land. Two forces came to the assistance of the tenant in his resistance to this encroachment—

1. Wherever the royal authority was gaining the upper hand the Crown sided with the tenants against the lords. A statute of William the Conqueror, quoted in the work of Professor Nasse later on referred to (we have no means of verifying the quotation), affords in this respect a remarkable analogy to the edicts of Frederick the Great and his predecessors alluded to in the text. It forbids the lords "removere colonos a terris dummodo servitia persolvent;" and it adds that if "domini terrarum non procurent idoneos cultores ad terras suas colendas iusticiarii hoc faciant." This clearly refers to tenant's land. On the other hand, Bracton defines "demesne land" (*dominium villenagium*) as "item dicitur quod quis tempestive et intempestive resumere possit pro voluntate sua et revocare."

2. The Law Courts were the second force which came to the aid of the tenants; and here again Germany furnishes cases exactly analogous to the celebrated decisions in the reigns of Edward III. and Edward IV., by which "customary tenure" was created, and the tenant obtained an action of trespass against the lord.

Each manor had its own usages and customs, which amounted to a kind of microscopic customary law.

The manors situated on the demesne lands of the Crown were immeasurably in advance of those in private hands, both as to the position of the peasants and as to economical results.

Justice would not be done to the intricacy of these relations, did we not add that besides the rights above described, there were innumerable cross-rights, servitudes, and easements, between the lords and the peasants (such as rights of pasturage by the lords of the common lands of the peasants, similar rights enjoyed by the peasants in the forests of the lords, &c.), as well as between the peasants of the same community "inter se," and between peasant communities belonging to different manors, and so on ad infinitum.

Lastly, the entire burdens of the State, as far as they rested on real estate, were borne by the peasant land.

Chaotic as this picture appears to us, it must not be supposed that chaos reigned in the monarchy of Frederick the Great. On the contrary, nothing could be more regular than the working of the wheels within wheels of this wonderful machinery—nothing more remarkable than the ledger-like beauty with which the productive forces of the country were inventoried, and the debtor and creditor account of its agricultural resources kept. The Hohenzollerns had brought with them from Nüremberg business habits which have not a little contributed to the greatness of the Prussian monarchy, and Frederick the Great in this, as in other respects, showed himself the representative man of his race. He was a strong advocate of the feudal system, such as he understood it, not from any mediæval turn of mind, but because it supplied him with a machinery which, in his hands, could be made to produce great results. The political power of the Prussian nobility had long since been broken. They were docile instruments in the hands of the Crown. Sufficiently numerous to supply the army with its officers, and therefore really rendering knights' service in return for knights' fees, yet not so numerous but that an indefatigable administrator like Frederick II. could thoroughly acquaint himself with the resources and capabilities of each of them, they represented so many responsible centres of administration, whom the king made accountable, not only for the public taxes and charges, but equally for the cultivation and agricultural economy of the monarchy.

Frederick the Great knew exactly what every acre of land, what every pair of hands, and what every yoke of oxen in his dominions were capable of producing, and he took care not only that they should produce it, but that they should be maintained in a state in which they should continue capable of producing it. He also knew the economical value of justice between man and man, and therefore, despite the tremendous strain put upon the peasant class during his reign, and the scrupulous maintenance of the manorial system, the peasants felt that the great king was their friend; and their material condition was undoubtedly raised under his reign. But this very improvement only served to hasten the changes which had become unavoidable. Under the weak sovereign who succeeded Frederick it was seen that the feudal system had long since been dead—that it had only been galvanised into apparent vitality by the genius of one man, and that the process of decomposition was only the more rapid for the temporary interruption.

The Battle of Jena and the Peace of Tilsit sealed the fate of the institution. The edict of October 9, 1807, was its death-warrant.

Let us look with our own eyes at this great landmark in the history of a great people.

“We, Frederick William, by the grace of God, &c. &c. Be it known unto all men that,

“Whereas, owing to the universal character of the prevailing misery, it would surpass our means to relieve each person individually, and, even if we could, the objects we have at heart would not be fulfilled (loquitur the mediæval Father of his people);

“And,

“Whereas, it is not only conformable to the everlasting dictates of justice, but likewise to the principles of a sound national economy, to remove all hindrances in the way of the individual attaining to that measure of material well-being which his capacities may enable him to attain (loquitur Adam Smith);

“And,

“Whereas the existing restrictions, partly on the possession and enjoyment of landed property, partly in connection with the personal condition of the agricultural population, in an especial manner obstruct our benevolent intentions, and exercise

a baneful influence, the one by diminishing the value of landed property, and impairing the credit of the landed proprietor, the other by diminishing the value of labour; we are minded that both shall be restrained within the limits which the public welfare requires, and therefore we decree and ordain as follows:

“ Free Exchange of Real Property.

“ § 1. Every inhabitant of our dominions is, as far as the State is concerned, henceforth free to acquire and own landed property of every kind and description. The noble, therefore, can acquire not only noble land but burgher and peasant land, and the burgher and the peasant can acquire not only burgher and peasant land, *i.e.*, land not noble, but likewise noble land.* Every such transfer of real estate must, however, continue, as before, to be notified to the authorities.

“ Freedom in regard to Choice of Occupation.

“ § 2. Every noble, without derogation to his rank, is henceforth free to exercise the trades and callings of the burgher—the burgher may become peasant, the peasant burgher.

“ In how far Rights of Pre-emption still exist.

“ § 3. (This paragraph is technical, and does not alter the principle of the measure.)

“ Division of Property.

“ § 4. All owners of real property, in its nature saleable, can, after due notice to the provincial authority, sell the same piecemeal and in detail, as well as in block. Co-proprietors can in the same way divide amongst them property owned in common.

“ Free power of Granting Leases.

“ § 5. Every proprietor, whether or not his property forms part of a fief or of any other kind of entailed property, is free to grant leases of any duration so long as the moneys received in payment of such leaseholds are used to pay off mortgages,

* §§ 6 and 7 restrict this right, which was only fully established by the “Edict for the better Cultivation of the Land,” on the 14th September, 1811.

and in the case of an entailed property, are capitalised for the benefit of the estate.

"Extinction and Consolidation of Peasant Holdings.

"§ 6. When a landed proprietor is of opinion that he cannot restore to their former condition or keep up the several peasant establishments on his property, he may, if the holdings have not got the character of hereditary tenures (*i.e.*, Anglicé, if they are not of the nature of copyhold or perpetual leaseholds), after the particular case has been inquired into by the Government of the province, and with the sanction of that Government, consolidate such holdings into one large peasant holding, or incorporate them with demesne lands.

"Special instructions as to the cases in which this process shall be permitted will be sent to the provincial Governments.

"§ 7. If, on the other hand, the tenures are of a hereditary kind, no change whatever can be effected without the previous acquisition by purchase, or in some other legal manner of the rights of the actual possessors. Such cases likewise require the formalities specified in § 6 (*i.e.*, *the previous sanction of the Government*).

"Facilities for Mortgaging Entailed Estates to pay Losses occasioned by War.

"§ 8. (The provisions of this paragraph are of a temporary kind).

"Of the cutting off of Entails.

"§ 9. Every entailed estate, whatever the nature of that entail, can be freed from the entail by the consent of the family.

"Abolition of Villeinage.

"§ 10. From the day of the publication of this edict no new relations of villeinage, either by birth, marriage, or acquisition of a villein holding can be created.

"§ 11. From the same date all peasants holding by hereditary tenures cease, they and their wives and their children, to be villeins.

"§ 12. From Martinmas, 1810, every remaining form of villeinage in all our dominions shall cease, and from that date

there shall be none but freemen in our dominions, such as is already the case in our domains in all our provinces.* It is to be understood, however, that these freemen remain subject to all obligations flowing from the possession of land or from particular contracts to which, as freemen, they can be subjected.

“So Given at Memel, 9th October, 1807.

“FRIEDERICH WILHELM,
SCHRÖTTER,
STEIN,
SCHRÖTTER II.”

Such, with a few abbreviations and some unimportant omissions, is the text of the measure by which Prussia thoughtfully and deliberately stepped out of the mediæval past into the modern present.

Not the least interesting feature of the measure is its affiliation with the teaching of Adam Smith and its impregnation with the spirit of the Kantian philosophy.

The three persons more immediately concerned with the framing of the measure—Schön, Schrötter, and Auerswald—had all of them been students at Königsberg and pupils of Kraus, the great expounder of Adam Smith at that university, and one of that brilliant professorial body who, under the inspiration of Kant, were calling attention to the fact that man was a rational being, and that reason might be profitably consulted even in matters of State. It is this, we conceive, which has left so indelible a mark upon the Stein and Hardenberg legislation.

At a moment of universal chaos, when the old landmarks had been overthrown by the breaking up of the waters of the deep, when Europe was torn asunder by the wild passions evoked by the French Revolution, when to one party to be a reformer was to be a *sans-culotte*, to the other party to maintain authority was to trample on the rights of man, a body of statesmen were found calm enough to take reason as their guide, and bold enough, in the teeth of the violent opposition of the privileged classes, to legislate *à priori*, and on general principles.

The interest which attaches to the Edict of 1807 is greatly

* Strange to say, this was an error; villeinage had at that time *not* ceased in all the domains of the Crown.

enhanced by an acquaintance with the deliberations of the commission from which it emanated. In that commission two parties had been hotly opposed to each other. The party of the pure economists, whose great object was to establish the most absolute freedom of exchange, both in land and labour, and who had an almost superstitious belief in the results which would flow from the application of capital to land as a consequence of this absolute freedom, and a party who, though equally zealous in their desire for reform, feared the disintegration which might result from this process, and were imbued with the Prussian traditions of the supremacy of the State over all the relations of its members, and impressed with the necessity of keeping intact the social foundations of the Prussian monarchy.

The disciples of Adam Smith, on the whole, carried the day, as the wording of the edict, every sentence of which breathes the spirit of free exchange and the liberation of productive forces, amply proves. On one point, however, connected with paragraphs 6 and 7, the opposite views, and this by the direct interposition of Stein, obtained a partial victory.

The point at issue in connection with this paragraph is one of great importance, as it involved one principal element of the controversy which raged in the commission, and is concerned with a principle on which opinion is at the present more than ever divided. It may, in its most abstract form, be thus stated. Should it be the object of the State to stimulate the community it represents to the production of the maximum of producible wealth irrespectively of the instruments by which it is produced, in other words, irrespectively of the distribution of that wealth; or should it have an eye to the distribution of that wealth as well as to its production? In the particular case under discussion it took this form: Should the State by its legislation stimulate the creation of large farms worked with corresponding capital, or should it, on the contrary, endeavour to retain the actual peasant cultivators, and only raise their personal status and increase their material well-being?

The economists were imbued with the ideas of Arthur Young, and the English farming system was the ideal they had in view. Why, asks Schön, waste the productive force of four proprietors and sixteen horses to do that which one proprietor and six horses can do better? Because, was the answer probably returned—though the actual answer is not recorded—in a

country like Prussia, whose existence depends on its fighting power, the wealth of the country could not for national purposes take a better form than that of the three additional proprietors and the ten additional horses.

The moment was singularly well adapted for a change from the one system to the other. The whole country was suffering from the devastation caused by the French invasion. Whole villages were lying in ashes, whole tracts were depopulated. The landlords were bound to restore the farm-buildings of the peasantry to their former state. Now, therefore, was the moment for consolidation. Give them the right of re-entry on the peasant land, or, at all events, allow them to amalgamate small holdings into large.

Paragraph 6 of the edict admits the principle, thus abrogating the very stringent laws above referred to against the extinction of peasant holdings; but confines its application to exceptional cases, the Provincial Government, and not the individual landlord, being the judge in each particular case.

In the Instruction to the Provincial Governments, the rule was laid down that the permission to extinguish peasant holdings should only be given in regard to so-called new land—*i.e.*, land created peasants' land, that is, let out in peasant tenures during the last fifty years; and that even in this case the permission should only be granted upon the condition that half the land proposed to be changed into demesne land should be made into comparatively large peasant holdings, and either given in fee simple to peasant holders or let on perpetual leases.*

* It was necessary to call attention to this conflict between the statesmen and the economists because it has been much commented upon and because the great name of Stein is immediately connected with it. Much misconception, however, exists on the subject. The prevalent idea is that it was by the direct interposition of the Prussian Government acting through the instrumentality of the instruction referred to in the text that the all-important class of peasant proprietors has been kept up. But this is wholly erroneous. The restrictions of the edict of 1807 remained in vigour for only a very short time, having been set aside by the edict of 1811. The point is one of great importance, inasmuch as one of the most valuable precedents in favour of peasant proprietorship would lose its value if it could be established that these Prussian peasant proprietors had been artificially maintained by means of State interference. One of the commonest arguments used in England against small properties is that they cannot maintain themselves by the side of large properties, and that where free exchange in land is the rule, the large properties will invariably swallow up the small; consequently, that if small proprietors are a desideratum, there must be a law of compulsory division of property as in France, or some special State interference "*ad hoc*" as is supposed to exist in Prussia, in order to keep them up. The example of Prussia, on the contrary, tends to establish exactly the reverse, for there, with the most absolute rights of alienation on the part of the

The Legislation of 1811.

The edict of 1807, great and incisive as had been its operation, was of a negative kind. It removed disabilities, undid the shackles which bound the peasant to the glebe, allowed such rights as existed to be used freely, and pulled down the walls which separated from each other the different classes of society. But it created no new forms of property; it proclaimed freedom of exchange, but it did not provide the title-deeds required as the first condition of exchange. Peasants' land could now be held indiscriminately by all the citizens of the State; but it was still held under the old forms of tenure; there were still two kinds of property. The lord was still owner of the peasants' land, but had no right to its possession. The peasant was free, but was not master of his labour.

The legislation of 1811 stepped in to remedy this state of things, and applying to the monarchy generally the principles which during the last three years had proved in the highest degree successful when applied to the State domains, it set itself to substitute allodial ownership for feudal tenure.

Its work was in the highest degree positive.

The legislation of 1811 mainly consists of two great edicts, both bearing the same date, that of the 14th of September. The one entitled, "Edict for the Regulation of the Relations between the Lords of the Manor and their Peasants."

The other, "Edict for the better Cultivation of the Land."

The first is concerned with the creation of new title-deeds for the peasant holders, and with the commutation of the services rendered in virtue of the old title-deeds.

The second surveys the whole field of agrarian reform, and introduces general measures of amelioration.

The preamble to the "Edict for the Regulation of the Relations between Landlord and Tenant" recites how "We, Frederick William, by the grace of God, King of Prussia, having convinced ourselves, both by personal experience in our

peasant proprietors, and with their immediate proximity to large and mostly entailed estates, they have fully maintained their position. Strenuous attempts were made in 1824 and 1834 to curtail the liberty of alienation and dismemberment conferred by the edict of 1811; but the result of careful inquiries made into the subject by the Government triumphantly established the fact that none of the ill effects had arisen out of this freedom of exchange which its enemies supposed.

own domains, and by that of many lords of manors, of the great advantages which have accrued both to the lord and to the peasant by the transformation of peasant holdings into property, and the commutation of the services and dues on the basis of a fair indemnity, and having consulted, in regard to this weighty matter, experienced farmers, and skilled persons of all kinds belonging to all our provinces, and to all ranks of our subjects, ordain and decree as follows : ”

The edict then branches off into two main parts.

The first dealing with peasant holdings in which the tenant has hereditary rights ; the second with holdings in which the tenant has no hereditary rights.

PART I.

All tenants of hereditary holdings—*i.e.*, holdings which are inherited according to the common law, or in which the lord of the manor is bound to select as tenant one or other of the heirs of the last tenant—*whatever the size of the holding*, shall by the present edict become the proprietors of their holdings, after paying to the landlord the indemnity fixed by this edict.

On the other hand, all claims of the peasant on the manor, for the keeping in repair of his farm-buildings, &c., shall cease.

“We desire that landlords and tenants should of themselves come to terms of agreement, and give them two years from the date of this edict to do so. If within that time the work is not done, the State will undertake it.

“The rights to be commuted may be thus generally classed :—

“I. Rights of the landlord.

1. Right of ownership (‘dominium directum’).
2. Claim to services.
3. Dues in money and kind.
4. Dead stock of the farms.
5. Easements, or servitudes on the land held.

“II. Rights of the tenant.*

* It is worthy of remark that the tenant’s “dominium utile,” or right of possession, is not recorded as a set-off against the “dominium directum” of the lord of the manor. The fact is, this right of possession is something so self-understood, that it never seems present to the mind of the legislator. The “dominium directum” is something quite different, for it represents an aggregation of all kinds of different rights. These rights he has to sell to the peasant, and the peasant buys them with the only thing he possesses, viz., his land.

1. Claim to assistance in case of misfortune.
2. Right to gather wood, and other forest rights, in the forest of the manor.
3. Claim upon the landlord for repairs of buildings.
4. Claim upon the landlord, in case tenant is unable to pay public taxes.
5. Pasturage rights on demesne lands or forests.

"Of these different rights only a few, viz., the dues paid in kind or money, the dead stock, and the servitudes, are capable of exact valuation.

"The others can only be approximately estimated.

"To obtain therefore a solid foundation for the work of commutation, and not to render it nugatory by difficulties impossible to be overcome, we deem it necessary to lay down certain rules for arriving at this estimate, and to deduce those rules from the general principles laid down by the laws of the State.

"These principles are :

"1. That in the case of hereditary holdings, neither the services nor the dues can, under any circumstances, be raised.

"2. That they must, on the contrary, be lowered if the holder cannot subsist at their actual rate.

"3. That the holding must be maintained in a condition which will enable it to pay its dues to the State.

"From these three principles, as well as from the general principles of public law, it follows that the right of the State, both to ordinary and extraordinary taxes, takes precedence of every other right, and that the services to the manor are limited by the obligation which the latter is under to leave the tenant sufficient means to subsist and to pay taxes.

"We consider that both these conditions are fulfilled when the sum-total of the dues and services rendered to the manor do not exceed one-third of the total revenue derived by an hereditary tenant from his holding. Therefore, with the exceptions to be hereafter described, the rule shall obtain :

"That in the case of hereditary holdings the lords of the manor shall be indemnified for their rights of ownership in the holding, and for the ordinary services and dues attached to the holding, when the tenants shall have surrendered one-third portion of all the lands held by them, and shall have renounced their claims to all extraordinary assistance, as

well as to the dead stock, to repairs, and to the payment on their behalf of the dues to the State when incapable of doing so."

The edict then goes on to lay down the rules to be observed in applying this principle.

These rules presuppose the existence of the agricultural community referred to in the earlier part of this Paper, viz., equal allotments in an arable mark: the division of the arable mark in which these several allotments are situated into three "*Commonable Fields*," or "Fluren;" a common system of cultivation obligatory on the community, in order to secure the community's right of pasture on the fallow and stubbles: and common rights of property in common lands occupied "*de indiviso*," mostly pasture lands, woods, &c., but sometimes also in arable common lands.

As the rule, the lord of the manor is to acquire possession of one of the three fields, or of one-third portion of each field, and of one-third portion of the common lands.

We have no space to enter into the details of the arrangements which provide for the cases differing from these.

As noted above, the lords and the peasants left are free to make what arrangements they please, as long as the proportion of one-third is maintained, *i.e.*, the indemnity may take the form of a payment of capital, or of a corn or money rent. Yet the rule to be followed (and a departure from this rule must have a distinct motive) is that the indemnity must be paid in land where the holdings are over fifty "*morgen*,"* but in the shape of a corn-rent where the holdings are under that size.

As a matter of practical convenience to both parties, the absolute separation of proprietary rights suffers some few exceptions: the first and most important is that the lord retains the right of pasturing the manorial sheep on two-thirds of the fallow and stubbles of the arable mark;† the peasant also continues to enjoy the right of collecting as much firewood in the demesne as he requires for his personal use: for this right and for the acquisition of his house and farm-buildings, as well as his garden-plot (his allotment in

* The Prussian acre is about equal to two-thirds of an English acre, a hundred English acres being equal to 158½ Prussian acres.

† Compare Rogers' "*History of Agriculture and Prices in England*," vol. i., p. 31.

the mark of the village), he continues to render services to the lord of the manor at times (*e.g.*, harvest) when extra hands are wanted. These services are, however, restricted to a maximum of ten days of team-work, and ten days of hand-labour for a team-peasant, and ten days man's work and ten days woman's work for a hand-peasant.

Several paragraphs of the edict are taken up with provisions for so apportioning the burdens on the holdings that nothing shall prevent their dismemberment and their being sold or exchanged in single parcels. Among these provisions is one preventing the peasant from mortgaging his estate above one-fourth of its value.

Where corn-rents are not paid punctually, the lord of the manor can exact services instead.

PART II.

The class of holdings treated of in the second part are those held at will, or for a term of years, or for life. In these cases the landlord gets an indemnity of one-half of the holding under much the same conditions as in the case of the hereditary holdings. When the conditions differ, they do so in favour of the lord of the manor.

By the edict, of which the above are the main provisions, entirely new conditions of land occupation were inaugurated, and corresponding changes became necessary in the other branches of the agricultural system.

The "Edict for the better Cultivation of the Land," published on the same day, had these changes in view.

Fully to understand what these changes were, and what was the nature of the agricultural reforms to be introduced into Prussia, the picture of the peasant community as a microcosmic reproduction of the old community of the mark must be kept in mind. The peasant occupier's tenement is situated, apart from his land, in a village or township; his estate is made up of a number of single lots or parcels, (*Grundstücke*) distributed over the three main divisions or *Fields* (*Fluren, Campi*) into which the arable mark is divided. Often intermixed with these peasant parcels, and subject to the same obligatory cultivation, are parcels of demesne land. In addition to his individual rights of possession in the arable

mark, controlled by the common rights of pasturage on the stubbles, he has common rights in the common pasture, which common rights he shares with the lord of the manor. Besides these rights he has rights of pasture, &c., in the forest lands of the demesne proper. The sum-total of these individual and common rights make up the peasant holding, correlative to which are the services to be rendered to the manor. As long as these services were calculated on the sum-total of the rights enjoyed by the tenant, it was of paramount importance that no dismemberment should take place. Consequently, even in the case of freeholders, none but exceptional dismemberments were allowed.

Apart then from the relations between landlord and tenant, or rather inseparably implicated in those relations, and therefore requiring simultaneous regulation, are the *common rights* of the peasants themselves, and the impediments which these common rights throw in the way of individual cultivation, and the free use of the rights of property about to be granted.

The ruling idea of the "Edict for the better Cultivation of the Land," as of its predecessor, and indeed of the whole legislation connected with the names of Stein and Hardenberg, is to enfranchise not the owner of land merely, but likewise the land owned by him, and to remove every impediment in the way of the soil finding its way out of hands less able to cultivate it into those better able to cultivate it. Conformably to these principles, the edict in question, in the first place, removes all restrictions still existing in the way of free exchange in land, in so far as private rights (*viz.*, rights arising from entails, servitudes, &c.) are not affected. By this proviso the restrictions contained in paragraphs 6 and 7 of the Edict of 1807 were removed, the difference between tenant's land and demesne land ceased, and the lord of the manor could freely acquire the former without the previous sanction of the State. On the other hand, by the perfect liberty granted for dismemberment (the maxim being laid down that it was better both for the cultivator and for the land cultivated that the former should administer a small unencumbered estate rather than a large encumbered one), the advocates of the "petite culture" were conciliated. The passage in the Edict is worth quoting *in extenso*, as it contains very explicitly what we have described as the ruling idea of the legislation we are discussing: an idea, it is true, which only attained its full

development forty years later, but which, nevertheless, in spite of the obstacles thrown in its way by the successors of Stein and Hardenberg, took sufficient root even at this early period to enable us to judge of its fruits. It is the idea of *ownership* versus *tenancy*, and of absolute freedom of exchange and disposal; and special importance attaches to it as representing principles opposed both to the French system of compulsory division, and to the English system of tenancy, primogeniture, and strict settlement. The passage we refer to runs on as follows:

“The proprietor shall henceforth (excepting always where the rights of third parties are concerned) be at liberty to increase his estate, or diminish it, by buying or selling, as may seem good to him. He can leave the appurtenances thereof (the ‘Grundstücke,’ or parcels distributed in the three *Fields*) to one heir or to many, as he pleases. He may exchange them or give them away, or dispose of them in any and every legal way, without requiring any authorisation for such changes.

“This unlimited right of disposal has great and manifold advantages. It affords the safest and best means for preserving the proprietor from debt, and for keeping alive in him a lasting and lively interest in the improvement of his estate, and it raises the general standard of cultivation.

“The first of these results is obtained by the power it gives to the actual proprietor, or to an heir upon entering on his estate, to sell such portions as will enable him to provide for his heirs or co-heirs, as the case may be, or for any other extraordinary emergency, leaving what remains of the property unencumbered with mortgages or settlements.

“The interest in the estate is kept alive by the freedom left to parents to divide their estate amongst their children as they think fit, knowing that the benefit of every improvement will be reaped by them.

“Lastly, the higher standard of cultivation will be secured by land—which in the hands of a proprietor without means would necessarily deteriorate—getting into the hands of a proprietor with means, and therefore able to make the best of it. Without this power of selling portions of his property, the proprietor is apt to sink deeper and deeper into debt, and in proportion as he does so the soil is deprived of its strength. By selling, on the other hand, he becomes free of debt and free of care, and obtains the means of properly cultivating what

remains to him. By this unhindered movement in the possession of land, the whole of the soil remains in a good state of cultivation; and this point once attained, increased industry and exertion will make it possible to attain a yet higher point, whereas a backward movement, except as the result of extraordinary mischances from without, is not to be apprehended.

“But there is yet another advantage springing from this power of piecemeal alienation which is well worthy of attention, and which fills our paternal heart with especial gladness. It gives, namely, an opportunity to the so-called small folk (*Kleine Leute*), cottiers, gardeners, boothmen, and day labourers, to acquire landed property, and little by little to increase it. The prospect of such acquisition will render this numerous and useful class of our subjects industrious, orderly, and saving, inasmuch as thus only will they be enabled to obtain the means necessary to the purchase of land. Many of them will be able to work their way upwards, and to acquire property, and to make themselves remarkable for their industry. The State will acquire a new and valuable class of industrious proprietors; by the endeavour to become such, agriculture will obtain new hands, and by increased voluntary exertion more work out of the old ones.”

The Edict next exacts, as a supplementary measure to the “Edict for the Regulation of the Relations between Lords of the Manor,” that in the case of hereditary leaseholds (*Erbpächte*) the services and fines may be commuted into rent-charges, and these rent-charges redeemed by a capital payment, calculated at four per cent.

It next proceeds to deal with the *common rights* of the peasants and of the lords; and here it fairly owns its inability to carry out the principle of the free owner on the free soil. The great mass of the peasant holdings are dispersed in small open “commonable” intermixed fields over the area of the arable mark; and the common rights of pasturage over the arable mark necessarily chain down the individual cultivator to the modes of cultivation compatible with these common rights. To disentangle this complicated web must be the work of time and of special legislation. The edict therefore announces a future law on the subject, and for the present confines itself to making provisions by which one-third part of such “commonable” fields can be freed from the common rights of pasturage, and placed at the absolute disposal of individual proprietors.

The rights of pasturage in the forest lands of the manor are more easily disposed of; the advantageous terms on which full rights of property are obtainable by the peasants render it possible to make stringent regulations in regard to the exercise of those rights, in the interest of the landlord and for the preservation of the forests.

To guard against the possibility of a return to the double ownership system, the edict lays down the rule that though a landed proprietor may settle labourers on his estate, and pay for their services in land, such contracts are never to be made for more than twelve years.

The Edict concludes by expressing it to be his Majesty's wish and will that agricultural societies should be formed in every part of the country, for the purpose of collecting and diffusing knowledge. The expenses of these societies, and the salaries of their secretaries, will be paid out of the Exchequer, and the societies themselves will be placed in communication with a central office in the capital, whose business it will also be to establish and maintain model farms in various parts of the country for the diffusion of agricultural knowledge. Besides this more or less unofficial machinery, provision is made for official agricultural boards to be established in each district; but these arrangements, having been superseded by subsequent legislation, need not be referred to.

The two edicts of the 14th September, 1811, may be considered as the culminating point of the legislation which goes by the name of Stein and Hardenberg.

Two important laws, it is true, immediately connected with the foregoing, were published in 1821, the one having reference to the regulation of common rights, the other to the commutation of servitudes into rent-charges, and to the redemption of the latter. Our space does not admit of our describing the former of these two laws, all-important as is the question of these common rights, and of the way they were dealt with, to a correct appreciation of the agricultural system of Prussia. The latter law was superseded by the much more drastic and complete measure passed in 1850, and need not therefore be more particularly dwelt upon here.

That which it is of importance to bear in mind is that these laws were the necessary complements of the foregoing legislation, and that unless this legislation had been itself cancelled, it was impossible for these laws not to have been passed. They

were carried, as it were, by the momentum of the Stein and Hardenberg legislation; but the impelling force which had imparted its momentum to that legislation had died out long before, and other forces had taken its place.

"Le nommé" Stein* had already, previously to the edicts of 1811, been driven out of the service of the Prussian crown by the mandate of Napoleon. Belonging to the class of statesmen to whom recourse is instinctively had in times of trouble, and from whom men who desire a quiet life, and who consider that sufficient unto the day is the evil thereof, instinctively shrink when the storm has passed by, he did not return to office when the French were driven from the soil of Germany.

We are not here concerned with his general schemes of political reform, intimately as they are connected with his agrarian legislation. It is sufficient to note that what may be termed his structural reforms, with the exception of the reform of the municipalities, remained in their draft form. The representative and self-governing institutions, which were to replace the jurisdiction of the manor and the "status pupillaris" in which the peasant community stood towards the manor, were never called into life, and are at this very moment occupying the attention of the Prussian legislature.

What he did succeed in carrying through was the reform of the Prussian administration, and the creation of the ablest and the most patriotic bureaucracy which ever weakened the plea for self-government by the plea of good government. It was against the serried ranks of this bureaucracy that the manorial reaction tried the edge of its sword; at first on the prosaic ground of vested interests, later on with the picturesque accompaniments of a mediæval revival. The completion of the great work of agrarian reform was prevented and kept in abeyance for upwards of a generation. Some of its features even were grievously disfigured, but the massive torso itself could not be moved from its place. Königsberg and Stein had engraved their mark indelibly on the history of Prussia.

The most directly retrogressive step was the declaration of the 29th of May, 1816, which limited the action of the "Edict for the Regulation of the Relations between Lords of the

* "Le nommé Stein cherchant à exciter des troubles en Allemagne est déclaré ennemi de la France. . . . Il sera saisi de sa personne partout où il pourra être atteint de nos troupes ou celles de nos alliés.

"En notre camp imperial de Madrid, le 16 Décembre, 1808.—NAPOLEON."

Manor and their Peasants" to farms of a comparatively large size, without abrogating the provisions of the "Edict for the better Cultivation of the Land" which did away with the constitutional difference between peasant's land and demesne land, and established the principle of free trade in land. By the combined effect of these two principles the "so-called small folk," whom the latter edict so ostentatiously took under its protection—*i.e.*, the great mass of small holders, who did not cultivate with teams—were placed at a huge disadvantage, for where their tenures were hereditary, they continued burdened with feudal services and dues; where they were not hereditary, they were evicted wholesale.

By a later declaration, in 1836, twenty-five Prussian acres is fixed as the minimum of a holding having the right to be enfranchised.

The Legislation of 1850.

The legislation of 1850 was in the highest degree prolific; but we need only concern ourselves with the two great laws of the 2nd of March.

1. The Law for the Redemption of Services and Dues and the Regulation of the Relations between the Lords of the Manor and their Peasants.

2. The Law for the Establishment of Rent Banks.

The former of these laws abrogated the "dominium directum," or overlordship of the lords of the manor, without compensation; so that from the day of its publication all hereditary holders throughout the Prussian monarchy, irrespectively of the size of their holdings, became proprietors, subject, however, to the customary services and dues, which by the further provisions of the law were commuted into fixed money rents, calculated on the average money value of the services and dues rendered and paid during a certain number of years preceding. By a further provision these rent-charges were made compulsorily redeemable, either by the immediate payment of a capital equivalent to an 18 years' purchase of the rent-charge, or by a payment of $4\frac{1}{2}$ or 5 per cent. for $56\frac{1}{2}$ or $41\frac{1}{3}$ years, on a capital equivalent to 20 years' purchase of the rent-charge.

The law for the establishment of rent banks provided the

machinery for this wholesale redemption. By it the State, through the instrumentality of the rent banks, constituted itself the broker between the peasants by whom the rents had to be paid, and the landlords who had to receive them.

The bank established in each district advanced to the latter in rent debentures, paying 4 per cent. interest, a capital sum equal to 20 years' purchase of the rent. The peasant, along with his ordinary rates and taxes, paid into the hands of the district tax collector each month one-twelfth part of a rent calculated at 5 or $4\frac{1}{2}$ per cent. on this capital sum, according as he elected to free his property from encumbrance in $41\frac{1}{2}$ or $56\frac{1}{2}$ years, the respective terms within which at compound interest the 1 or the $\frac{1}{2}$ per cent., paid in addition to the 4 per cent. interest on the debenture, would extinguish the capital.

The account given of these rent banks in Mr. Hutton's pamphlet, p. 18, is so clear and exhaustive, that it would be lost labour to attempt to improve on it here.

The legislation of 1850 was no more than the efficacious application of the principles contained in the edict of 1811. At first sight, two new principles appear to have been introduced, viz., the absence of compensation for the "dominium directum," and the elimination of the principle of payments in land. But if we look at the matter more closely, these differences amount to little. The "dominium directum," as before observed, deprived of its material contents—i.e., of the services and dues, was absolutely valueless to the overlord, whilst, on the other hand, the immediate and simultaneous entrance into full proprietary rights on the part of the many thousands of holders who were affected by the law of the 2nd of March, was calculated to exercise a moral effect of the greatest magnitude.

As regards the non-commutation in land, it will be remembered that the edict of 1811 laid down the rule that the services of holdings less than fifty Prussian acres in size should be commuted in rent-charges only. Now it is probable that most of the holdings over this size had been redeemed prior to 1850, so that practically the law of the 2nd March had only to deal with the smaller kinds of holding, for which the commutation of services by a rent-charge had been provided by the edict of 1811. It was not by the newness of the principles, therefore, but by the incomparably superior machinery for applying the principles, that the legislation of 1850 established

its superiority over that of 1811, and obtained much larger results in comparatively so short a time.

Such in very rough outline is a sketch of the agrarian legislation of Prussia during the present century. Neither the space nor the time at our disposal have allowed us to do more than attempt to point out its chief incidents, and connect these with the general agricultural history of the Teutonic race. The identity of this history in the earlier stage of the several Teutonic communities has already been dwelt upon. Given this identity, it necessarily followed that at some time or other, in the development of each Teutonic community, the same problems presented themselves for solution. According as they have been solved in one way or the other, the entire social and political condition of the several communities has been modified. The organic change common to all, and which constitutes, as it were, the turning-point in their several histories, is that from cultivation *in common* to cultivation by *individuals*, or, to use two old English terms, from "champion country" to "severall." To the student of English history, the word which corresponds to this change is "enclosure," the true significance of which has, however, not always been seized by either English or foreign writers on the subject.* The great "enclosing" movement in the sixteenth century is usually described as if it had merely had for its object to turn arable land into pasture. Its importance as a joint effort on the part of the lords of the manor to withdraw their demesne lands from the "communion" of the township has been overlooked. That this object was in itself highly desirable, and the *conditio sine quâ non* of any improvements in agriculture is undeniable; it was an organic change through which every Teutonic community had necessarily to pass. The evils which attended the process in England at the time referred to arose from the fact, that instead of being effected by impartial legislation, as has been the case in Prussia during the present century, the change was forcibly brought about by the one-sided action of the landlords. Any one acquainted with the practical difficulties experienced in Germany in making analogous separations, will readily comprehend all the injustice which one-sided action in

* An invaluable contribution to the history of this complicated subject has been made this year by Professor Nasse of Bonn, in a paper entitled "Ueber die Mittelalterliche Feldgemeinschaft und die Einhegungen des Sechszehnten Jahrhunderts in England," to which we refer any of our readers who may doubt the conclusions we have come to in the following pages.

such a process on the part of the stronger must have implied. In the most favourable case, the withdrawal of, say, one-third,* or one-half of the land from the "commonable" arable land of a township, such half or third portion, be it remembered, consisting, in many cases, of small parcels intermixed with those of the commoners, must have rendered the further common cultivation impossible, and thereby compelled the freeholders and copyholders to part with their land and their common rights on any terms. That in less favourable cases the lords of the manor did not look very closely into the rights of their tenants, but interpreted the customs of their respective manors in the sense that suited them best, and that instead of an equitable repartition of land between the two classes, the result was a general consolidation of tenants' land with demesne land, and the creation of large enclosed farms, with the consequent wholesale destruction of agricultural communities or townships,† is well-known to every reader of history. That the result of the newly-acquired liberty of agricultural operations was to increase sheep farming is equally well known; but the two facts are usually brought into immediate connection with each other, without reference being made to the primary fact which governs the two, viz., not the enclosure of arable land as such, but of "commonable" arable land. The immense increase in stock, apparently without any diminution in the amount of corn grown (for during the period when the clamour against the enclosures was hottest the price of corn remained uniformly low), was the result of the natural improvement in agriculture, caused by the change from "champion" to "severall," which enabled more produce of all kind to be got out of the land with less labour.

We have called attention to this great crisis in English

* In a majority of cases the tenants' land in a manor was much in excess of the demesne land.

† Cf. Hen VII. 4, cap. 19, "an acte against the pulling down of townes." "Toune" is here used in its original sense, viz., as the equivalent not of a *walled* city, but of a *fenced-in* village—"villa," "villata." "Tun," which is the same word as the German "Zaun," means *fence*. The "tunskip," or township was therefore the enclosure within which the tenements of the community, with their garden lots, &c., were permanently fenced off from the unenclosed commonable mark. For the arable mark, as such, was unenclosed—the "fields," "fluren," "campi," being only temporarily fenced in whilst the grain-crops were growing and until they were harvested. Hence it was the *permanent* enclosing of the several lots held in the open unenclosed arable mark which constituted withdrawal from the community, and which, where it was done on a large scale, necessarily led to the break up of the "community" of the township.

agriculture during the sixteenth century—1st, because we believe that it affords the correct analogy to the Prussian agricultural crisis in the nineteenth century; and 2nd, because the matter not only possesses great historical interest, but is still of practical importance; for the change we have been describing was by no means completed in the sixteenth century. Down to the present century very large portions of England were still cultivated in common, on the old Three Field System,* and the work of enclosure is not done yet.

Now, speaking with all diffidence, we cannot but believe that legislators called upon to frame Enclosure Acts might find their task made easier to them by a knowledge of the principles and practice which during the last sixty years have been applied to similar legislation, not in Prussia only, but in every State of Germany. England is the only Teutonic community (we believe we might say the only civilised community now existing) in which the bulk of the land under cultivation *is not in the hands of small proprietors*. Clearly, therefore, England represents the exception, and not the rule; and no exception can be understood without a knowledge of the rule.

Three great countries—England, France,† and Germany—began their political life from a similar agricultural basis. In each of them the great conflict between *immunity* and *community*, between *demesne land* and *tenant land*, between the *manor* and the *peasant*, has had to be fought out.

In England the manor won; the peasant lost. In France the peasant won; the manor lost. In Germany the game has been drawn, and the stakes have been divided. Each system can be defended and passionately pleaded for. Each has much to be said for and against it.

We have not been able to do more than call attention to the general analogies of the question, hoping that some abler pen than ours may be tempted to take up the subject, and examine the land history of the United Kingdom in connection with the land history of kindred nations.

Should our hope be realised, we shall feel that in an infini-

Considering the object for which this volume of essays has been written, it may seem incumbent upon us before we come to a close to estimate how far the precedent afforded by Prussia is available for the purposes of Irish legislation.

We confess ourselves, however, unequal to a task which would presuppose a far different acquaintance with the agricultural relations of Ireland than any we possess.

All we can do is to hazard a review of the Irish land question from the standing ground which we can conceive a man, penetrated with the wisdom of the principles upon which the legislation of Prussia is founded, might occupy.

1. The first thing which such a man would do would be to point out the impossibility of directly applying that legislation to the present state of Ireland. Turning as it does upon what the Germans call the "constitutional" difference between "demesne" land and "tenants'" land, in the mediæval acceptation of those terms, it could be applied directly only where that difference existed.

2. He would express in no measured terms his condemnation of a system of tenancy-at-will. Here we can speak *ex cathedrâ*, there being a remarkable paper extant in which Stein expresses his opinion on uncertain tenures.

3. He would probably set aside primogeniture, entails, and strict settlements. On large estates held by corporations he would look with no friendly eye. The "dead hand" fills him with peculiar horror. He everywhere wishes to see the living hand grasping the living soil.

4. He would insist on every rood of Irish land having a parliamentary title, and being transferable by a cheap and simple system of registration. His land and mortgage register deposited in each township with its accurate map of the district would play an important part in his system.

5. When he came to examine the popular cry for *fixity* of tenure, he would, we are inclined to think, reject it absolutely. He would declare that it must lead to one of two things, either to the stereotyping of the system of *double ownership*, against which the whole legislation of Prussia is an emphatic protest, or to the eventual undivided ownership of the present tenants,

i.e., to the dispossession "en bloc" of the present proprietors. In the first case all the evils of double ownership would be aggravated by the peculiar tendencies of Irish agriculture. The tenant not having the passion for his land or the pride in it which ownership alone can give, would sublet and subdivide. The landlord, knowing that, the rent due to him being a first charge upon the estate, his interests, limited as they were, were safe, would look on with indifference, and not interfere. In a word, the landlord would be divorced from the soil without the tenant being married to it, and the evils of an illicit union would be the natural result. But the experience of Prussia would have taught our imaginary critic that where a variable rent is changed into a fixed rent charge, even where the possibility exists of a periodical revision, and of an increase at some future period in the amount of the rent-charge, the almost certain consequence is the redemption of the rent-charge by a payment of capital, and he believes that this result would inevitably follow in Ireland. For supposing the periodical revision were to take place every twenty or thirty years, what landlord would hesitate to sell this reversionary right, and what tenant would hesitate to buy it by any sacrifice in order thus to enter into full proprietary rights? But the dispossession of the present proprietors and the substitution of the actual tenants as the sole proprietary class, would mean economically the withdrawal from the soil of the class having the largest capital and enjoying the largest credit; and the reproduction in another shape of the present evil of a class monopoly in the ownership of land. One object of Prussian legislation was that *every* class should participate in the rights and duties which flow from property in land, and this object would be equally defeated whichever was the monopolising class.

6. Having rejected fixity of tenure and tenancy-at-will, he would look to leases as the "*tertium quid*." He would require written contracts, in a form established by law, but varying according to the modes of cultivation in the various districts. In the absence of such written contract, the presumption of the law would be in favour of the lease enjoined by the legal contract of the district, the landlord having a right of eviction if he could prove that the tenant had refused the legal contract.

7. He would next examine the question of improvements effected by tenants, and would establish Boards of Arbitration,

on the model of the Prussian General Commissions, but with juries composed equally of landowners and tenants to decide questions of fact. These boards should determine what the value of such improvements amounted to in each case. This amount would constitute a first charge upon the estate, and be registered as such in the Land and Mortgage Register. It would be left to the landlord and tenant to determine in what way the debt should be extinguished; but a limit of time within which the charge should be liquidated might be fixed. Where the value of the improvements approached or exceeded that of the fee-simple of the land, it would be a question left to the parties, assisted by the Board of Arbitration, to decide whether the landlord should buy up the tenant's right, or the tenant the landlord's.

8. He would not be inclined to look with favour on Ulster tenant right, at least where that right implied a payment for the "good-will," in excess of the value of the improvements made by the tenant or his predecessors, as he would consider this another form of *double ownership*. The Board of Arbitration would carefully discriminate between the value of improvements and the value of the good-will "per se;" and would treat the former in the way already suggested, whilst it would consider the latter as a servitude on the estate, to be redeemed in the manner most favourable to the landlord.

9. Having done his utmost to place the relations of landlords and tenants on a satisfactory footing, and having removed all difficulties in the way of free alienation, he would next occupy himself with the creation of farmer proprietors, *i.e.*, of a middle-class proprietary. Remembering the colonisation of waste lands by Frederick the Great, he would see what was to be done in the way of diminishing competition for land already under cultivation, by organised settlements on uncultivated lands, keeping in view the fact that land, which it does not pay to reclaim for the object of *rent*, will yield sufficient returns when tilled as property. He would, in the next place, by means of rent-banks, and on the Prussian system of amortisation, facilitate every transaction by which a landlord might desire to sell his property to his tenants; the rent-bank advancing the capital sum to the landlord, and recouping itself out of a percentage added to the rent. By means of the same machinery the State, acting through the bank, would buy up all the land that came into the market, and sell it to

occupiers. The object of the State not being to make money, but to create proprietors without loss to itself, the principle of competition would not be allowed to act in these sales. Two conditions would have to be laid down: 1st, that the farm should be of sufficient size fully to maintain the proprietor and his family, according to the highest scale of comfort known in the district; 2nd, that the intended proprietor should possess the necessary capital to work it. Where these conditions were fulfilled, the actual occupier would have the right of pre-emption. Where they were not fulfilled, he would have to be bought out, and the farm would be given to the candidates who fulfilled the conditions. Where several such candidates presented themselves with equal claims, the choice of the candidate would be decided by lot. On entering into possession, the future proprietor would have to sign a bond, by which he engaged, until he had paid up in full, neither to let nor sublet, to keep the farm-buildings in repair, &c. On his failure to fulfil these engagements, the bank would have a right to evict him on repayment of the rates already paid by him.

10. All these objects, he believes, would be attainable by using the credit of the State, and without any cost to the taxpayers. Any spare sums of money derived from Church property, or other sources, he would employ in establishing agricultural schools and model farms in every part of the island, and in imparting an elementary knowledge of agricultural science to the national schoolmasters.

Such, we believe, is the kind of programme which our imaginary legislator, arguing from a general kind of Prussian analogy, and with only a general knowledge of the Irish Land Question, might recommend.

It must not be forgotten, however, that being, under the hypothesis of the case, a foreigner, he is, on the one hand, unacquainted with the political difficulties of the question, and, on the other hand, possessed of that belief in the omnipotent and beneficent action of the *State*, which it would not be easy to impart to an Englishman.

REPORT ON LAND TENURE IN THE GRAND DUCHY OF HESSE, BY MR. MORIER.

The Grand Duchy of Hesse presents agricultural features of considerable interest :—

1. It is a country of small proprietors, with just a sufficient number of large farms interspersed among these small holdings to facilitate a comparison between the results of the two systems of cultivation.

2. Small as is the area of the Grand Duchy, the conditions under which the peasant cultivates the soil he owns are of the most varied kind, and offer the greatest possible contrasts both as regards natural advantages and disadvantages, and as regards the historical antecedents which affected the tenures of the peasantry prior to their emancipation.

3. The agrarian legislation of the Grand Duchy during the present century is worthy of special notice, owing to the large and liberal principles upon which the commutation of feudal services and dues was effected. The law of 1836, by which these services and dues were commuted into rent-charges, and the State undertook to advance to the lords of the manor a capital sum equivalent to eighteen years' purchase of this rent-charge, established the precedent which was afterwards copied by nearly all other States in Germany, and which, in 1850, was applied upon an unusually large scale in the rent banks founded in Prussia.

4. The system of land registration, and of the transfer and mortgaging of land connected therewith, enjoys a deservedly high reputation for its efficacy and cheapness.

5. Lastly, the system of agricultural instruction, and the methods employed for diffusing agricultural information and a knowledge of the best modes of cultivation amongst all classes of the peasant population, are excellent of their kind, and well worthy of attentive consideration.

Agrarian Legislation of Hesse during the present Century.

A general survey of the agrarian history of the Grand Duchy of Hesse during the present century is necessary for understanding the agrarian conditions in that State.

The distinguishing characteristic of that history, in common with that of every other German State during the same period, is the transition from the forms of feudal tenure and mediæval agriculture to those of undivided land ownership ("allodial" * ownership), and individual in contra-distinction to joint cultivation.

* The word "allodial" plays so important a part in German agrarian legislation, whilst, on the other hand, owing to the complete feudalisation of the soil in England,

The two features connected with these mediæval forms which it is necessary to bear in mind for the purposes of the present inquiry are the relations in which the manor ("Frohnhof," "Salhof," "Curtis Dominicalis," in modern phraseology "Guts Herrschaft") stood to the tenants of the manor, and those in which the latter stood towards each other and towards the soil occupied by them.

I. The manor, with its combination of public duties and private rights, constituted the political and economical unit of mediæval rural society. The origin of these duties and these rights cannot be inquired into here, but it is of importance to note some of the peculiarities which distinguished the German mediæval manor from the English mediæval manor. In both there was the radical difference between "demesne land" and "tenant's land." In both the "demesne land" was sometimes intermixed with the "tenant's land" and cultivated jointly with the latter, sometimes separate from it and administered directly from the manor by a bailiff, or let out in farms. In both the tenants rendered services and paid dues in kind, or money, sometimes in both, to the lords of the manor. In both the tenants were under the jurisdiction of the Manorial Courts (Court Baron, Court Leet, Customary Court, "Patrimonial Gericht"). In both the pasture was used by the lord and the tenants.

In England, owing to a variety of circumstances, and principally to the violent but systematic and simultaneous introduction of the feudal system, a large proportion of the tenants rapidly fell into a state of villeinage, but emerged almost equally rapidly, though almost imperceptibly, from this state as far as it affected their persons. The broad distinction between freedom and unfreedom remained, however, imprinted on the soil, and became stereotyped in the tenures known as freehold and copyhold, forms sharply opposed to each other, and with no connecting-links between them.

In the same imperceptible manner the jurisdiction of the manor gradually fell into desuetude, and merged in that of the Royal Courts. Lastly, in accordance with the feudal rule, "nulle terre sans Seigneur," the pasture, which it can hardly be doubted was originally in England, as in every other Teutonic community, the joint or common property of the lord and the tenants, was ruled to be the property of the lord, and considered as waste of the manor, the tenants retaining only rights of usufruct therein.

In Germany, owing to the comparatively gradual growth of feudal institutions, and to the variety of political circumstances under which they were introduced into the different parts of the empire, the change from free to servile occupation took place by slow degrees, and the earlier forms of occupation retained their vitality for a far longer period, thereby permanently affecting the agricultural history of the nation.

At a time when the larger proportion of the tillers of the English soil

as the result of the Norman Conquest, it has so entirely disappeared from our own vocabulary, that it seems necessary to determine its exact signification. "Alod" and "Feod," "allodial" and "feudal," stand opposed to each other etymologically and historically, the former as connoting full, entire, undivided ownership, the latter, divided and restricted ownership. They were originally the Teutonic equivalents for the Roman ideas of "Dominium" and "Possessio," and, amidst the innumerable political and social ideas that have since become associated with them, this original meaning of "full possession" and mere "usufruct possession" can be clearly traced.

were "adscripted" to the glebe, the majority of the German agricultural population were free proprietors, whose civil and political rights were, in theory at least, equal to those of the most powerful barons. Of the remainder, a large proportion were in a dependent state betwixt freedom and unfreedom, the so-called "Liti" or "Laten" (afterwards "Hörige"), and constituted a middle class which profoundly influenced the future incidents of land tenure. The class absolutely servile, or slaves properly speaking, formed probably but a small proportion of the entire population.

But if, on the one hand, the change from freedom to unfreedom was slow, it was, on the other hand, all the more permanent and indelible. As late as the thirty years' war the number of free allodial peasants was considerable. At the close of the last and the commencement of the present century villeinage, though widely differing in its character in different parts of Germany, was the almost universal rule.

One result, out of many which flowed from this difference of development, was, that instead of the one broad distinction between freehold and copyhold the mediæval tenures of Germany shaded off into every conceivable variety between the two extremes of free and servile.

The jurisdiction of the manor, instead of imperceptibly wasting away as in England, shaped itself into definite form, and the "Patiimonial Gericht" became a court of first instance for the rural population. It is, however, of importance to note that in the smaller territories, which during the later centuries of the empire were gradually consolidating into sovereign states, a transition similar to that which marked the early period of English history took place, but by a converse process. In England the manorial court was absorbed by the royal courts; in the smaller territories the manorial court grew into the territorial court.

Lastly, the pasture, which was in England ruled to be an appurtenance of the manor, retained in Germany, in a majority of cases at least, its original character of common-land, owned "de indiviso" by the lord and the commoners.

II. The feature which next to the manor it is of most importance to note in connection with German agriculture past and present is the "Gemeinde," or "Commune," in which the agricultural population is associated. Correctly to appreciate this institution it would be necessary to go back to pre-feudal times and to examine the constitution of the early Teutonic communities which colonised the soil of Germany previous to the conquest of the Roman provinces, a task incompatible with the limits of this paper. It must therefore suffice to state that from the earliest times until now the actual cultivators of the soil have been associated in corporations or "commonalties," the members of which hold land in common, and are united by common duties and common rights, the manor in its dealings with its tenants having, in consequence, invariably found itself face to face not with isolated individuals but with a corporate body.

The constituent parts of the "Gemarkung"—*i.e.*, of the territorial district corresponding to the "Gemeinde"—were invariably the following:—

The common pasture, the arable land, and the holding in the village or township in which the commoners were domiciled.

The common pasture (except in the minority of cases in which the original community was settled on demesne land) was held "de indiviso"

by the commoners and the lord of the manor. The arable land was held partly individually, partly in common by the community. The tenement in the township, with its garden and appurtenances, was always held individually.

The distinguishing peculiarity of mediæval agriculture in connection with these village communities consists in this: that although the arable land was held, in part at least, individually—*i.e.*, so that each commoner had so many acres in the so-called arable mark (which he originally owned as his "alodium" and afterwards held from the lord of the manor)—yet the cultivation of the arable land was the joint work of the community, and strictly controlled by the common rights of the associates.

The mode of cultivation was almost universally that of the so-called three-field system ("drei felder-wirthschaft") or two crops and fallow system. The entire arable land of the township was divided into three great fields ("Campi, Fluren"), in which a regular rotation of crops and fallow succeeded each other—each field, for instance, bearing one year wheat, the next year oats, the third year lying fallow, so that two-thirds of the arable land was always under crops and one-third in fallow. There is no doubt that in early times, when agricultural implements were clumsy and expensive, and required a much larger amount of team power than later (five and six yoke of oxen, for instance, not being an uncommon team for a mediæval plough), the actual cultivation was carried on jointly, so that the number of ploughs owned by a community was less than the households composing the community. In time, however, this ceased, and each household cultivated its holdings on its own account; but, owing to the rights of pasturage which the commoners had over the fallow and stubbles, the obligatory crop rotation continued. For it stands to reason that the right of the community to turn out its cattle during the whole year on the fallow of one field, and during a given portion of each year on the stubbles of the remaining fields, would have become illusory unless the same crop had been simultaneously sown and simultaneously reaped on the whole of each field.

One of the most mischievous results of this rude form of agriculture, and one with which German legislation has not yet successfully dealt, consists in the excessive parcelling of the peasant properties—*i.e.*, of the property held by each peasant. The cause is obvious. When the arable land of a community was originally distributed amongst the associates, the lots assigned to each was equal; but, to prevent the individual associate finding himself once in three years with the whole of his land lying forcibly fallow, which would have been the case if it had lain in a single block in one of the three fields, he received his lot in three parcels—*i.e.*, one parcel in each field. Now, if we suppose that in a given community 75 acres was the size of the original allotment, each household would in the first generation have had 25 acres in each field. Let us suppose one of these allottees to have 3 sons, amongst whom he divides his property equally. In the second generation each of these 3 sons will own 25 acres in 3 parcels $8\frac{1}{3}$ acres each, in all 9 parcels. If we suppose these 3 sons to marry the 3 co-heiresses of another allottee, the 3 households in the second generation will find themselves possessed of 18 parcels distributed in every conceivable direction over the 3 fields. It is easy to imagine what in the course of a few generations this subdivision would amount to. As long as the cultivation in common continued, and the same crops were raised in each field, the sub-

division did not so much signify. For whilst the same kind of working, manuring, ploughing, sowing, harvesting, was going on simultaneously in every part of the field, the individual allottee found no difficulty in reaching his parcel, and required no road to take him to it. It is only since the common rights of pasturage, and with them the compulsory cropping, have ceased, that the inconvenience to all parties has been felt, and that the right of way amidst heterogeneous cultivations of the several parcels has become an intolerable nuisance.

This sketch will, it is hoped, suffice to render the outlines of the agrarian legislation of the Grand Duchy of Hesse during the present century intelligible.

The Grand Duchy, as at present territorially composed, consists of the ancient patrimony of the Landgraves of Hesse, and of the parts thereunto annexed by the Act of the Confederation of the Rhine, and other treaties connected with the territorial changes in Germany at the commencement of the century.

The ancient patrimony, *i.e.*, the greater portion of the present provinces of Stakenburg and Upper Hesse, may be looked upon as originally an aggregate of manors collected under a chief manor (an "Honour," as it was anciently termed in England), whose lord, in addition to his manorial rights and manorial jurisdiction, had succeeded in possessing himself of the territorial jurisdiction and territorial dominion ("Landeshoheit," "Territorial Herrschaft"), which, in the anomalous constitution of the Empire formed the stepping-stone to the full rights of sovereignty, which were only acquired after the Empire itself had fallen to pieces. These manors were intersected by other manors, each with its own jurisdiction (patrimonial *gericht*), but standing under the territorial jurisdiction of the Landgrave of Hesse.

Hence when the present Grand Duchy was constituted, a large portion of the rural inhabitants of the old provinces stood to the Grand Duke in the double relation of tenants and subjects; but it should not be forgotten that for many previous generations the features of the feudal manor, as far as the Landgravine possessions were concerned, had gradually faded away, and been replaced by those of the modern state. The feudal baron had changed into the *fiscus*, the private demesne into State domain, the mediæval bailiff into the *uniformed* State employé.

It should also be noted that unlike many other parts of Germany, especially in the eastern provinces of Prussia, in which each peasant community, *gemeinde* or *commune*, had a separate manor, and therefore separate demesne land, which the members of the commune were forced to cultivate, corresponding to it, a vast number of the peasant communities of the Grand Duchy did not stand in this personal relation to a local manor. Partly from their having been originally free communities, who had surrendered their allodial rights and only paid fixed dues, partly from the original demesne lands having been let out in permanent tenures, these communes, though under manorial jurisdiction, exercised by the employés of the Government, only paid fixed money dues, and enjoyed considerable rights of self-administration.

The parts annexed were very variously composed. The Rhine Province, which was only acquired in 1815, having for several years been under the domination of France, had participated in the legislation, which made a

tabula rasa of all mediæval and feudal land tenures. The acquisition of territory made in the two original provinces consisted, on the other hand, mainly of territories belonging to territorial lords whose status in the Empire had been the same as that of the Landgraves, and who, therefore, had not only exercised manorial rights over their so-called subjects, but the more extended territorial jurisdiction above referred to. Many of the territorial rights and privileges of these mediatised princes and counts were stipulated for in the treaties by which they became subjects to the Grand Ducal Crown.*

Up to the year 1820 the State thus composed was ruled absolutely, and the laws were proclaimed in the shape of Grand Ducal Edicts. From that date the country has had a Constitution, and the laws enacted have passed through the ordeal of a Representative Chamber and an hereditary Upper House, which latter, it should be noted, contained the mediatised princes and counts, and the other territorial magnates of the Grand Duchy.

The agrarian legislation may be said to begin in 1811, and to close in 1849.

It had, as in every other State in which feudal land institutions have existed, four great objects to accomplish:—

1. Abolition of villeinage in so far as it affected the personal status of the villein.
2. Commutation of feudal services and dues into fixed rent-charges.
3. Abolition of villein and other feudal tenures, and substitution in lieu thereof of undivided (allodial) ownership.
4. Regulation of common rights with a view to unrestricted individual cultivation.

I. Villeinage in Hesse, as well as generally in the centre and south of Germany, had always been of a mild character. It consisted, at the time of its abolition, by the Edict of 25th of May, 1811, solely in personal dues, *i.e.*, in dues paid by the villeins to their lords irrespectively of any land held by them. These dues were made redeemable by a capital payment spread over a certain number of years. In the "Domaine Lands" this operation was completed more rapidly than in the "Sovereignty Lands," by reason of the large remissions made by the Crown.

II. The commutation of feudal services and dues into rent-charges, and the redemption of those charges, was a labour on which the Legislature of the Grand Duchy was incessantly employed up to the year 1848.

The dues and services to be commuted were of every imaginable kind, and it required in many cases toilsome antiquarian research to distinguish and decide what was their true character. For the manor having had partly a public and partly a private origin, and in addition to this the Sovereign of the Grand Duchy standing in regard to a large portion of his dominions in the double capacity above referred to of a Lord of the Manor

* In the official phraseology of the Grand Duchy these mediatised territories are styled "Sovereignty Lands," to express that the Grand Ducal Crown had obtained Right of Sovereignty over them without the territorial rights of their owners, having, on that account, altogether merged, or the owners themselves become together assimilated to, the former subjects of the Landgrave of Hesse. The status of the mediatised was determined by the Treaties which created the Germanic Confederation. To distinguish the new "Sovereignty Lands" from the old possessions of the Landgravine House the latter were termed "Domaine Lands" (Domanial Länder).

and of the Head of the State, it was in regard to the fiscal services and dues extremely difficult to separate the services that had been rendered and the dues that had been paid as public taxes from those which were of the nature of rights flowing from private property.

The general principle laid down was, that all such services and dues as could be proved to have had a public origin should be abolished without compensation, existing taxes being considered in the light of equivalents.

It was possible to carry this principle out in the domaine lands, but the mediatised having resisted its application as a breach of the treaties by which they were annexed, had to be compensated out of the public exchequer.

The services and dues to be redeemed fell into two great categories. 1. Those which burdened land owned by the persons who redeemed the services and paid the dues, such as tithes and other servitudes in every conceivable variety. 2. Those which represented the *bona fide* rent of land, held by the owner of the "dominium directum."

Owing to the great variety of tenures alluded to, it was often a nice point of law to determine in whom the ownership resided, and in what case the services and dues represented a mere charge on an estate, or a rent implying rights of ownership in another.

After many enabling statutes had been passed to facilitate the commutation of fixed and unfixed services and dues of every kind into rent-charges, a great law was passed on the 27th of June, 1836, by which all rent-charges already in existence, or to be created by the enabling statutes referred to, could be made compulsorily redeemable at the instance of the rentee or the rentor.

The services and dues belonging to the second category, *i.e.*, charges of the *bona fide* nature of rent, were not included in this statute, unless the parties mutually agreed to commute them first into rent-charges.

The exceptionably favourable conditions under which these rent-charges were made redeemable by the law of 1836 had their origin in the fact that large sums of ready money had accumulated in the hands of the Commissioners for the Extinction of the Public Debt, which it answered their purpose to lend out at small interest.

Making due allowance for these exceptional circumstances, the general principles involved in the measure may, nevertheless, be considered as based upon the two following economical considerations 1. That where its finances are properly administered, the State, as representing the sum total of the credit of all its members, can borrow money more cheaply than its individual members can. 2. That by means of its ordinary administrative machinery, the State can collect rents and enforce their payment more cheaply than the individual.

These two sources of saving furnish the sinking fund, from which, without paying more than the ordinary rate of interest, the rentee can, in a comparatively short period, refund the capital with which the rent-charge has been bought up. The principle of the Hessian law of the 27th June, 1836, supplied, I believe, the precedent afterwards copied in every German state where similar feudal charges had to be extinguished,

and which by means of the so-called rent-banks was applied on a large scale in Prussia in 1850.

The following are its main features :—

The State pays to the rentor a capital sum equivalent to 18 years' purchase of the rent-charge, and becomes the rentee's creditor for that amount, charging 3 per cent. as the interest on the capital paid, and 1 per cent. towards the amortisation of the capital, which, at compound interest, extinguishes the debt in 47 years.

The calculation is based on the following data:—A, the rentor, receives from B, the rentee, a yearly rent of 100 florins.

Out of this income it is calculated that he pays 22 florins a year in public and communal taxes, and that the cost of collection, arrears, &c., represent a further deduction of 6 florins, leaving him a net revenue of 72 florins, or 4 per cent. on 1,800 florins, *i.e.*, on the 18 years' purchase of the rent-charge.

When the State has paid these 1,800 florins to A, B discharges his debt by the following yearly payments :—

	Florins.
3 per cent. on 1,800 florins	54
1 per cent. sinking fund	18
3 per cent. on rent-charge as cost of collection and bad debts	3
	<hr/>
	75
Add to this the taxes formerly paid by A, now paid by B ..	22
	<hr/>
Total	97

By this operation, B paying 3 per cent. less than he did before, extinguishes his rent-charge in 47 years, and A gets indemnified in the full value of his property.

III. It would be an impossible task to classify within the limits of this Report the various kinds of tenure by which the peasants of the Grand Duchy held the lands occupied by them; and it would require very extensive legal and historical knowledge accurately to explain the points on which German and English mediæval land tenures differed from each other. I can only refer to the statement made in the Introduction, to the effect that between the two extremes of free and servile tenures there were in Germany almost endless shades of difference. The feature common to all is the double ownership; the "*dominium directum*" and the "*dominium utile*;" the diversity lies in the amount of proprietary rights with which the "*dominium utile*" invested the tenants.

In two important incidents, however, the peasant tenures, of whatever kind, resemble copyhold tenures, *viz.*, first, in being agricultural tenures; and, secondly, in the grant being made by the Manorial Court, and subject to its jurisdiction, and not by the Lehnhof, or Feudal Court proper, which had jurisdiction over knights' fees. I have, therefore, no hesitation in classing them, *mutatis mutandis*, with copyholds.

The two kinds of tenure which in the Grand Duchy differed the most from each other were the tenures which, by the introduction of the civil law into Germany, had assumed the character of the Roman "*emphyteusis*"

Erbzinsgüter, &c.), and those known under the names of "Erbleihe" and "Landsiedelgater."

In the former, the overlord's rights were reduced to a minimum, and the tenant's raised to a maximum, the tenant being able to devise and alienate as he pleased, and the overlord, having a right only to a fixed charge (kanon) on the estate, very much less valuable than the agricultural rent of the holding. In these tenures the ownership was considered, for practical purposes, as residing in the tenant.

The "Erbleihe" partook more closely than the English copyhold did of the character of a fief, and was, in fact, a kind of agricultural fief, the generic term for this kind of tenure being "Bauern Lehn," or "Peasant's fief." They were held by grants similar to those by which German knights' fees were held, with the difference that agricultural services and dues took the place of military services. As far as I can ascertain, there was nothing in these grants to indicate the personal status of the grantee. Villeinage was a local* or personal incident apart from the grant, and which, as before stated, was abolished separately. Grants of the kind under consideration were made indiscriminately to villeins and freemen, and the services and dues contracted for were irrespective of those which flowed from the personal status of the grantees.

The distinguishing features of the "Erbleihe" and "Landsiedelgut" were--1st. That the grant had to be renewed in every case in which there was a change in the person of the lord or the tenant, and that a fine was paid upon such renewal. 2ndly. That the rent was fixed and could not be raised. 3rdly. That the grantee could not mortgage without the grantor's consent. 4thly. That the holding was transmitted by inheritance in a direct, but not in collateral lives. The heir must be the legitimate child of the grantee, but not necessarily a male child or his eldest child, and he or she must inherit the entire holding, which cannot be sub-divided. Failing direct issue the holding reverted to the lord of the manor. 5thly. That before the renewal of the grant the heir must commute with his co-heirs in respect of their share of the paternal estate, and the latter must expressly renounce all claims on the holding. 6thly. That the holding cannot be alienated without consent of the grantor, who receives a fine (laudemium) equal to 5 per cent. of the proceeds of the sale when such consent is given.

As in every other circumstance connected with this transition from the feudal to the modern forms of land occupation, the Grand Ducal Government, with the aid of the Lower Chamber of the Hessian States, took the initiative and met with the determined resistance of the Upper House.

Soon after 1820, regulations were framed under which fiscal tenures belonging to the class of Erbleihe could be commuted into fixed rent charges, afterwards redeemable by the law of 1836. The attempt made to pass a general law extending the operation of these regulations to non-fiscal tenures repeatedly failed. Bills introduced and passed unanimously by the Lower House were unanimously rejected by the Upper House, and it required the pressure of the events of 1848 to break down this opposition.

* A man was a villein either by birth or by being domiciled in a commune in which, as the judicial phrase ran, "the air was villeinous" (Die Luft leibeigen war); a freeman settling in a villein village became a villein.

Out of these voluminous and tedious negotiations I will select two passages, which in an especial manner characterise the respective attitudes of the two parties opposed to each other, parties that might be described as the party of the "Modern State" and the party of "Vested Interests."

In introducing a Bill for the commutation of fiscal rent-charges in 1820, the Government Commissary said, that for the present the Government meant to deal only with fiscal property, not but that they considered themselves, in conjunction with the Chambers, perfectly competent to make laws for the transformation of the forms of private property if the general welfare of the community required such laws.

In 1832 the Upper House, in rejecting the Bill for the commutation of the "Erbleihe" tenures, used the following argument:—

The Bill, though ostensibly based on the same principles as the law by which tithes had been commuted into rent-charges, viz., the removal of burdens on real estate, and the restoring to the owner full proprietary rights, in reality proposes a course directly opposed to these principles. The real proprietor is the overlord—*i.e.*, the owner of the "dominium directum," whose property is burdened by the tenant's rights; and instead of proposing to commute these latter rights, and thus returning to the proprietor his individual ownership, it proposed to buy out the proprietor, and hand over his estate to another, which is clearly an attack upon rights of property.

The law of the 6th of August, 1848, for the "Allodification" of "Erbleihe" and "Landsiedelgüter" at last brought the long controversy to a close.

By this law it was enacted that tenures of the kind I have described as partaking of the Roman "emphyteusis"—viz., "Erbpacht," "Erbzinsgüter," &c.—should be commutable under the general law of the 27th of June, 1836, for the commutation and redemption of rent-charges, but that tenures of the nature of Erbleihe should be treated as follows:—

Every grantee shall have a right to demand commutation in every case where the reversion to the grantor is barred by at least two lives besides his own—*i.e.*, in every case in which he has two children alive, or one child and a grandchild, &c. (The law does not apply to grants in which reversion is stipulated for after a definite number of generations.)

The transmutation into allodial ownership can be effected in three ways at the option of the tenant.

Either by—

1. The payment of a capital sum equivalent to the value or the fixed and variable dues (viz., the rent, whether in services or money, and the fines on renewal of grant at grantor's or grantee's death), and to that of the rights of ownership as such:

Or by—

2. Converting the fixed and variable dues into a fixed rent-charge under the provisions of the law of 1836, and similarly commuting the rights of ownership as such, and making these into an additional rent-charge.

Or by—

3. Buying up the rights of ownership as such, and leaving the dues only as a fixed charge on the estate.

The rights of ownership, as such, are defined to be the rights of reversion, the fees paid for clerical work in drawing up the grant, and the fines paid on the sale of the property.

The fines paid on renewal of grant are classed amongst the variable dues.

The dues are redeemable by a capital payment equivalent to eighteen years' purchase.

The rights of ownership, as such, are redeemable by one-tenth of the value of the fee-simple of the estate.

IV. The Law of September 7, 1814, and the subsequent legislation of 1849, dealt with the "common" rights which stood in the way of individual cultivation. Nothing could exceed the intricacy of these rights, and a separate treatise would be required to give an approximately correct picture of the work that had to be done and of the way in which the legislation did it.

It must suffice to say that the object of the laws referred to was to disentangle the cross servitudes and easements which the peasant communities possessed in the demesne lands of the lords, and those which the lords possessed in the common lands of the peasants, as well as to separate and regulate the common rights which the peasants enjoyed "*de indiviso*," and those they claimed on each other's land. The object of these laws was that every landed proprietor, whatever the size of his property, should be able not only to dispose of it freely, which was the object pursued by the other laws we have been discussing, but freely to use it whilst in his possession without let or hindrance from the concurrent rights of third parties. I may add that at one time the Government encouraged the division of common arable lands, and the appropriation of these lands by the individual households of the commune, but that it was dissatisfied with the results thus obtained, and has since, in virtue of its right of supervision over the communes, discountenanced these appropriations except under exceptional circumstances.

From the above it will appear that the creation of freeholds has been enforced by the legislature upon a very large scale, that the Government has taken steps to increase the number of owners, that the system adopted for this purpose is still in force, that compensation has been granted to proprietors for such limitations of proprietary rights, that assistance by law and by public credit has been given to tenants in their endeavours to become proprietors of their holdings, and that such endeavours have been general.

For the answer to the specific question with regard to tenures resembling copyhold I must also refer to what precedes.

I classed, for the reasons there given, all the mediæval peasant tenures which the Grand Ducal Government has made such efforts to extinguish, and to replace by full rights of allodial ownership, in the category of copyholds.

How far the irremovableness of the tenants who held by the tenures which I described as partaking of the Roman "*emphyteusis*" was the result of custom, of judicial decisions, or of the latent ownership which adhered to the holders of the tenant's land of a manor as distinguished from the demesne land of the manor, is a question which belongs to the most recondite branch of mediæval jurisprudence, and upon which I will hazard

no opinion. It stands to reason, that in the face of legislation such as I have described no such kinds of tenure are in the process of formation. The one ruling idea of the agrarian legislation, not of Hesse only but of every part of Germany during the present century, has been to extirpate double ownership, and to substitute in lieu of it full unhampered rights of allodial possession.

LAND OCCUPATION.

The area of the Grand Duchy comprises 3,065,739 Hessian morgen.* These are distributed as follows:—

	Hessian Morgen.
Arable land	1,531,556 50
Meadows and pastures	402,933 13 1
Vineyards	39,744 1 3
Forest	959,873 31 3
<hr/>	<hr/>
Total of productive land	2,934,106 95 7
Hofraithe (<i>i. e.</i> , buildings, agricultural establishments, &c.)	16,528 0 5
<hr/>	<hr/>
Land untaxed, <i>i. e.</i> , quite unproductive	2,950,634 96 2
	115,105 3 8
<hr/>	<hr/>
Total	3,065,739 100

A very large proportion of the forest is owned by the Crown, and by the large proprietors, viz., the mediatised princes and counts, &c. The greater part of what remains is owned as corporate property by towns or rural communes. A very small proportion only is the individual property of peasant proprietors.†

* The Hessian morgen is exactly equal to a quarter hectare, and is rather less than two-thirds of an English acre; 162 morgen being equal to 100 English acres.

† The forests of the Grand Duchy are, as regards their cultivation, all of them directly or indirectly under the control of the State. They may be classed in four categories:—

1. Those belonging to the State as domain. 2. Those belonging to the communes. 3. Those belonging to the large proprietors, viz., the mediatised and other of the former great manorial lords. 4. Those belonging to smaller proprietors.

The first and second category are administered directly by the State through the instrumentality of a highly-trained body of forest officials. The communes, though enjoying the entire income derived from their forests, have only a consultative voice in regard to their administration. The Grand Ducal employes who manage them are, however, paid out of the communal exchequer. The private proprietors are not bound to any details of cultivation, and administer their woods by means of their own employes, but they cannot "devastate," *i. e.*, allow the forest to go out of cultivation, and they require the permission of the State before they can disforest.

Small isolated patches under ten morgen in the case of the large proprietors, and four morgen in the case of the small proprietors, are not placed under this State control.

The net income derived from domain forests is:—In the Province of Starkenburg, 6 florins 7 kreusers; Upper Hesse, 2 florins 34 kreusers; Rhine Hesse, 6 florins 39 kreusers per morgen.

The net income derived from communal forests is:—In Starkenburg, 4 florins 37 kreusers; Upper Hesse, 3 florins 42 kreusers; Rhine Provinces, 5 florins 41 kreusers per morgen.

I have been unable to obtain exact statistical information as to the proportions in which the arable land and the meadows and vineyards are distributed amongst the different classes of proprietors, but as far as I am able to infer from only approximately correct data, and those not of a recent date, I am inclined to estimate the amount of arable land, cultivated in large consolidated farms of from 200 to 1,200 morgen, at about 100,000 morgen. If we add to this 100,000 morgen more for small properties included in the nexus of the peasant community, but not, properly speaking, belonging to the peasant class (and this is probably too large a margin) there would remain more than 1,300,000 morgen of arable land, with a corresponding amount of meadow land and vineyards, in the hands of peasant cultivators, either as proprietors or farmers. What proportion of the land so cultivated is owned by peasant proprietors, and what proportion is merely farmed, I have been unable to ascertain exactly, but I believe that at least two-thirds (probably very much more) is owned by peasants either "de indiviso" as communal property, or individually in parcelled estates, or small consolidated farms (so called "Geschlossene Güter").

I think, therefore, that it can be safely assumed that two-thirds at least of the land under cultivation is owned by peasant proprietors, and that thirteen-fifteenths of the arable land is under peasant cultivation.*

The land occupied by tenants is held directly from proprietors, either in large farms by professional agriculturists, so called "Ökonomen," or in parcels by peasants, who cultivate them jointly with their own parcels in the fields of village communities.

Sub-tenancy is regarded as an unmitigated evil; and in the written

* The most accurate data which have been furnished to me have reference to the State domains, and it is partly from them that I have come to the conclusions in the text.

The public domain comprises 60,854 morgen. Of these 2,501 are still held by hereditary tenures, which, for various causes, have not yet been commuted, 2,516 are held by life tenants, 42,941 are let on leases, and 12,746 are administered directly by the State.

A great proportion of the land held by life tenants, and of that let on lease, consists of parcels distributed in the arable fields of the peasant communities, and is farmed by the peasants. They point to the time when the demesne land and the tenant land was cultivated jointly in the manner stated above. The 12,746 morgen administered directly by the State consists principally of meadows and grass fields, of which the crops are sold by auction before they are cut. The leases of land let in parcels usually run for 9 to 12 years. Those of land let in consolidated farms for 18 years.

The amount of domain land let in consolidated farms amounts to about 8,000 morgen, which, in addition to the 12,000 administered by the State, make up 20,000 (or one-third out of the total of the 60,000), cultivated on a large scale, and according to the rules of the "Grande Culture." The remaining 40,000 morgen are under peasant cultivation either in the form of permanent tenure, or let on lease to the members of the communities in which the parcels are situated.

If we take the proportion of one-third consolidated farms and two-thirds parcels' cultivation as ruling the land owned by the other great proprietors, it would give 300,000 morgen as the amount of cultivated land owned by large proprietors other than the State. Hence, total owned by large proprietors, 360,000 morgen. Add to this the 100,000 morgen I have allowed for middle-sized properties, in the nexus of the peasant communities but not owned by persons of the peasant class, and we obtain 460,000 morgen. But the whole amount of cultivated land, *i.e.*, arable land, meadows, and vineyards, is, in round numbers, 1,960,000; there would, therefore, remain the large margin of nearly 200,000 morgen as the property of churches, schools, and other corporate bodies not included in the margin of 100,000 already allowed for. Total of all these items, 660,000 morgen, or one-third of the entire cultivated land, leaving two-thirds as the *bona fide* property of peasants.

leases by which all tenancies are now created there is usually a clause distinctly prohibiting sub-letting.

(A.)—SMALL PROPRIETORS.

In reply to the following questions I shall use the terms peasant proprietors, and not small proprietors, because it is the quality of the property and not its size which affords the distinguishing agricultural characteristics which it is of importance to take cognisance of.

The peasant proprietor is member of a rural commune, and the rural commune is at once a private corporation with the rights of a "juridical person," *i.e.*, the right of holding real estate, of suing and being sued, &c., and a public body constituting the administrative unit of the circle. It is termed the "political" commune to distinguish it from the "ecclesiastical" commune, *i.e.*, the parish, from which it is distinct, though usually conterminous with it. It is governed by a Common Council and a Burgomaster, the former being elected by the members of the commune, and the latter being named by the Government from amongst the members of the Common Council. The Burgomaster exercises police authority in the commune; and he, with two more assessors, also members of the commune and appointed by the Government, constitute the local court (Ortsgericht), whose competency in civil matters extends to such primary functions as fall within the province of notaries public, where that institution exists. If the Government do not consider the Burgomaster possessed of the necessary qualifications to preside over the Local Court, they name some other person in his stead.

The peasant proprietor, therefore, has public duties as well as private rights, for he cannot withdraw himself from the obligation to fill such communal offices as may be assigned to him, and those offices imply public duties, such as the collection of taxes, &c.

The Government exercises certain rights of supervision over the private affairs of the community, which, for instance, cannot alienate land without the authorisation of the Government.

The property of the large proprietors, who formerly enjoyed manorial rights, lies either in separate districts outside the nexus of the commune, or is distributed within the limits of such communes. In the latter case it is subject to communal taxes, and the owners are, in matters of police, within the jurisdiction of the communal authorities; but they are not members of the commune, and therefore have no rights of property in the common lands. If the quantity of land owned by a large proprietor in a commune exceeds a certain amount, he has a right to name one member of the Common Council to represent his interests. In many cases, however, the communes have retained right of pasturage and other easements in the forests of the former manors.

(A.) 1. The amount of land held by the individual peasant greatly differs, and there are no statistics to enable one to calculate the average.

It is possible, however, to give the limits within which this diversity ranges.

Eliminating the class whose properties are not sufficient to maintain them without having recourse to other employment, either as day labourers or mechanics, and taking the minimum average required fully to maintain

the proprietor and his family, the following scale applies to the different provinces.

In Rhine Hesse, which for more than half a century has been under the French law of compulsory division, estates are classed as small when they range from 5 morgen to 25, as middle-sized from 25 to 100, and as large when over 100. Probably but very few *bona fide* peasant proprietors over 100 morgen would be found, and the majority, I imagine, fall in the lowest category.

In the provinces of Starkenburg and Upper Hesse the corresponding classes are, respectively, in Starkenburg, from 6 to 50, from 50 to 200, and above 200.

In Upper Hesse, from 10 to 75, from 75 to 250, and over 250.

In both these provinces, likewise, the highest class must be considered the exception, though probably isolated cases of rich peasants, who have accumulated from 300 to 400 morgen, may occur. In both of them there are the widest differences in the average size of the holdings, according to the locality in which the respective communes are situated. Where the tenures of the "Erbleihe" character prevailed, the holdings, as previously stated, could not be subdivided, and therefore whether they were in parcels or consolidated, their original size, whatever that was, was maintained. But in addition to these there exists in parts of both these provinces many communes whose origin, though I have been unable to trace it, must be of a later date than the old mediæval communes under the "three field" system of cultivation, and in which the holdings have always been consolidated in single blocks, and have, by local custom, been transmitted for generations to one child, not necessarily, though usually, the eldest son, with very little regard to the legal rights of inheritance of the remaining children. Many of these holdings are from 70 to 100 morgen, and run side by side in thin parallel strips of exactly equal size, the farmhouses being situated in the centre of the block.

But these are the exceptions to the rule. In the great majority of cases the holdings are dispersed over the arable land of the community in single parcels, intersected by those of other holdings in the way described at page 190. In many parts of the Grand Duchy the subdivision arising from these causes has reached an intolerable pitch, and various consolidating Acts have been passed for the purpose of remedying the evil. These Acts have, however, only been partially successful, and a new measure is being at the present moment prepared, which it is hoped will prove more efficacious.

In every community in which the holdings lie in parcels, the proprietors live together in a township, or village, for the most part closely crowded together, and with little room for the farm buildings, stables, &c. Such villages or townships, in the days of joint cultivation, were the agricultural centres of the arable "Mark," and could not be extended without encroaching upon property subject to common rights.

Where the holdings are in consolidated farms, the tenements and farm buildings of each proprietor are situated on his farm, but as those communities have usually been settled simultaneously and in a systematic manner, the farmhouses occupy the same place in the same part of each holding, and the character of a village is not lost—only that instead of being closely crowded together, the village presents the appearance of a

street sometimes a mile or more in length, the houses of which, surrounded by gardens and orchards, stand some 50 or 60 yards apart from each other.

Peasant Cultivation.

The modes of cultivation in the different parts of Hesse vary so much, and are subject to such different conditions, that no general statistics respecting crops, stock, &c., would convey any definite idea of the actual wants of the system in force. Under these circumstances the method which suggested itself as that most likely to furnish a correct picture of peasant cultivation, such as it prevails in the Grand Duchy, was to select a certain number of representative communities, and by personal inquiry on the spot ascertain as many facts as I could respecting each.

Commencing with the provinces on the right bank of the Rhine, to which the legislation previously dwelt upon exclusively applies, I shall take the commune of Viernheim as representative of the class of communes in which the peasant cultivator is placed under advantageous circumstances, and in which the marks of general prosperity are everywhere discernible.

It is situated in the province of Starkenburg, about 6 miles from a station on the Great Trunk Line which connects Central Germany with France and Switzerland, and at about the same distance from Mannheim. It belongs to the class of communities in which parcels' cultivation prevails, and the tenements and farm buildings of the proprietors are consequently collected in a township. This township contains a church, a town hall, a school house, and 626 tenements.

The number of inhabitants is 4,000. The number of citizens (Bürger)* *i.e.*, of male members of the community who have attained the age of 21, is 1,050. Of these, 300 are employed in factories in the neighbouring towns; 100 work as cigar-makers in the village; 300 work as day labourers; 300 are maintained wholly from the produce of their holdings; and 50 are shopkeepers, employés, schoolmasters, &c.

The area of the communal district comprises 19,366 morgen, distributed as follows:—

	Morgen.
Forest	11,614
Land taken up by the buildings of the village ...	89
Gardens	117
Arable	6,409
Meadows	596
Roads, &c.	539

The forest is the property of the Crown. There was a long law suit on the subject, the commune claiming it as communal property. The case was finally decided against the commune, which, however, retained very important forest rights, each citizen being entitled yearly to all the firewood he requires, and to the timber needed for the building

* Modern legislation, in its dislike to mediæval associations, has rooted up the old historical terms used in connection with the agricultural communes, such as Bauern, Schultheisse, Schöffen, &c., and has replaced them by the phraseology used in connection with town corporations, such as Citizens, Burgomasters, Common Councils, &c.

and repair of his house and farm buildings, or to an equivalent in money.

Besides the wood, the commune has rights of pasturage in the forest, which, however, except when there is a large crop of acorns, in which case the right is valuable for the fattening of pig-, is of no great advantage. The pasturage is bad, and the demand for manure in connection with tobacco cultivation renders stall-feeding indispensable.

Of the arable land 100 morgen belong to the Crown, and 212 to the Church and School. All this property is in parcels, and let on lease, parcel-wise, to the citizens.

The common lands (*almende**) consist of 2,772 morgen, and 70 klafter,† distributed in three classes. The first class consists of 186 lots of about 10 $\frac{3}{4}$ morgen each.

The second class consists of 663 morgen 336 klafter, distributed in 180 lots, of an average size of 3 $\frac{3}{4}$ morgen.

The third class consists of 192 lots, of an average size of 250 klafter ($\frac{3}{4}$ morgen). In all 508 lots.

These lots are assigned to the members of the community, according to the date of their entry in the Civil Register of the commune, so that the older the individual the larger his share in the common property. Whenever an allottee of the first class, or his widow (for the widows, unless they re-marry, have a right to the husbands' lots), dies, the highest on the list of the second class succeeds to his lot, the highest on the list of the third class succeeding to the lot vacated by the latter's promotion to the first class, the highest on the list of the fourth class (a separate class afterwards explained) succeeding to the vacancy in the third class, and the highest on the list of non-allottees succeeding to the vacancy in the fourth class.

It will be seen from this that more than half of the members of the community hold common lands quite irrespectively of their status as proprietors, agricultural labourers, or operatives. Where it does not suit them to cultivate their lots themselves, they find no difficulty in letting them to others.

Besides the "*almende*," or common lands proper, there are 373 morgen of meadow land, belonging to the Exchequer of the Commune, which are divided into 423 lots; 192 of these lots supplementing the lots of the third class, and raising them to 1 morgen 203 klafter, and the remaining 231 lots constituting a fourth class. These lots, however, pay a small rent, which flows into the Communal Exchequer.

Of the remaining 3,548 morgen of arable and meadow land, about 520 are apportioned in comparatively large properties, viz., one of 200 morgen, and four of from 70 to 100 morgen. The largest of these can hardly be classed as a peasant property, although the owner is a citizen of the com-

* *Almende*, contracted from "*Allgemeinde*," or "*Allen Gemein*"—*i.e.*, common to all—was originally the generic name for all common lands—*i.e.*, for all land owned, *ab indiviso*, by the community. It is now in Hesse specifically applied to such of the common lands as are apportioned in the manner appointed by local usage or statute to the individual citizens. Common lands not apportioned in severalty, but administered for the benefit of the communal exchequer, are termed "*Cassen Güter*," or exchequer lands.

† The klafter is equal to 100 Hessian square feet. The morgen is equal to 400 square klafter.

munity, because part of it consists of the remains of an ancient fief. The four smaller ones are *boni fide* peasant properties, but the proprietors of two of them do not, socially speaking, belong to the peasant class. They are men of education, and one of them is a highly scientific agriculturist, who obtained a prize at the Paris Exhibition for the general results obtained by his farming.

If we deduct these larger farms, there remain about 3,000 morgen distributed in properties ranging from 1 morgen to about 30.

From 10 to 20 morgen is the size of the holding considered as capable of maintaining a household according to the local scale of comfort.

From 6 to 10 will maintain a household, but only precariously, and not without great exertions and great prudence. With less than 6, the household requires other sources of income. With more than 20, a household is well off; indeed, if not in debt, very well off, as will at once be seen by the amount of rent for which land lets in the commune, which varies from 25 to 40 florins a morgen. If we take 30 florins as an average, a holding of 30 morgen would yield 900 florins, or about £80 a year, as rent, which may be taken as equivalent to the net profit which, after paying all its expenses, a household ought to be able to clear.

The question as to rotation of crops is one not easily answered, as the great difference in size of the several properties necessitates a corresponding difference in the kind of crop to be raised, and in the mode of raising it.

The crops are divided into so-called mercantile crops (*Handels Gewachse*) and home crops—*i.e.*, crops raised with a view of being sold to dealers and consumed away from the locality, and those raised for the purpose of home consumption.

To the former category belong tobacco, hops, wheat, rape, barley for malting, clover seeds, oats, Indian corn. Peas, beans, mangolds, sugar beet, turnips, potatoes, are raised for home consumption by the proprietors and their cattle.

Tobacco and hops are the two most valuable crops, the former being the one which most directly influences the agriculture of the locality. It is highly remunerative in good years, when prices range high; but it is liable to great risks from frost, and also to great fluctuations in value, and it requires considerable outlay in manure and labour. The consequence is that its cultivation, to a certain extent, impresses a speculative character on the agriculture of the township, which has a bad side as well as a good one. For though the hope of extraordinary returns, dependent partly on more careful cultivation, more copious and more judicious manuring, &c., partly on forecasting the future, and watching international markets, and the like, undoubtedly develops intelligence, and, *pro tanto*, counteracts the spirit of plodding and routine; yet the great ups and downs are apt to engender a spirit of gambling, which intensifies the evils flowing from the natural fluctuations in the value of the crop. It often happens, for instance, that after a favourable season, and when large prices have been realised, fabulous sums are paid for land, either in the way of purchase or rent, and that an amount of land is laid out in tobacco out of all proportion to the remaining crops. Many instances were mentioned to me in which a peasant with 10 morgen applied 5 of them to the production of tobacco, 5 morgen out of 30 being considered the right proportion. A bad year fol-

lowing on a combination of this kind is naturally productive of great disaster.

From 250 to 300 cwt. of stable manure, of the value of about 50 florins (£4), is the quantity which, with very high farming, is applied to the morgen of land on which tobacco is grown. The small proprietor would probably not be able to afford as much. If we assume that he applied about one-fourth less we get the following data to calculate his returns.

Average crop per morgen on a small peasant property, about 8 cwt. of good leaves and 1 cwt. of so-called sand leaves, viz., the bottom leaves, which are soiled. Average price in 1868, 13 florins a cwt. for the former; $9\frac{1}{2}$ florins for the latter: total value of crop per morgen, 113 $\frac{1}{2}$ florins (£9 8s.).

Manure, 38 florins (£3 3s.); excise duty, 10 $\frac{1}{2}$ florins per morgen; total, 48 $\frac{1}{2}$ florins, which would leave 65 florins (or about £5 8s.) per morgen profit; but against the manure must be put the milk and meat which the cattle have produced the meanwhile, and which ought to be at least equivalent to the value of the manure. If the proprietor, therefore, maintains the right proportion in his crops, and only plants as much tobacco as he can manure from the proceeds of his own farm, he clears over 100 florins (between £8 and £9) per morgen. The danger of planting tobacco on speculation, involving a large previous outlay for manure, bought probably with borrowed money, will, from this, be apparent.

I have not calculated the cost of labour, because I am assuming the case of the small proprietor in which the household furnishes its own labour. Where this is not the case, about 4 florins a cwt. is reckoned the cost of production, exclusive of manure and excise tax. There are certain processes, however, connected with tobacco culture which require a great deal of work to be got through in a short time, such as hoeing, picking, sorting the leaves, &c. At such times extra hands are required even on the smallest farms, and therefore a proportionate deduction must be made from the net profits.

It stands to reason that a difference of 3 or 4 florins a cwt. in the price of the leaf (this year sand leaves, for instance, are 13 $\frac{1}{2}$ florins a cwt. as compared with 9 $\frac{1}{2}$ last year), amounting to between 26 and 30 florins per morgen, affects the yearly budget of the farmer in a considerable degree. But the variations may be infinitely greater. A frost may totally destroy the crop, an exceptionally fine year may double its value and raise the profits proportionably.

As I stated before, there is no regular rotation in force in the community; but the following has been given me as the most rational rotation, where the size of the holding will allow of it, and as one often used:—

First year—Tobacco, with very copious manure.

Second—Spelt, without manure.

Third—Barley and clover mixed, without manure.

Fourth—Clover (sown the previous year with the barley).

Fifth—Spelt again, with slight manure, stable manure, or liquid manure.

Sixth—Potatoes or beet, without manure.

Seventh—Beet root, with compost manure in the holes into which they are transplanted.

Sometimes in the fourth year, instead of clover, lucerne is sown and cropped for six or eight successive years.

There are, for the ensuing year, about 870 morgen under tobacco in the commune—*i.e.*, $\frac{1}{3}$ th of the entire arable land, which would about correspond to this rotation.*

The following are the average quantities of grain sown and the average results obtained :—

Of spelt, 100 lbs. weight are sown to the morgen. The crop varies from 10 to 15 malters (at 110 lbs. per malter) per morgen, *i.e.*, from 11 to 16½ fold.

Rye, 80 lbs. per morgen; crop, from 5 to 8 malters (at from 180 to 190 lbs. the malter), *i.e.*, about 11 fold.

Barley, 80 lbs. per morgen; crop, from 7 to 10 malters (at from 165 to 180 lbs. per morgen), *i.e.*, from 14 to 20 fold.

Oats, 65 lbs. per morgen; crop, from 10 to 12 malters (at from 120 to 130 lbs. per malter), *i.e.*, from 22 to 24 fold.

With the exception of one steam threshing machine, which works for hire, but is not largely used by the small farmers, there is no steam agricultural machinery in the commune. There are no mowing and no drilling machines, the sowing being all done by hand. Cutters of various kinds for chaff, turnips, &c., of modern make, are extensively used. The agricultural implements are, all of them, very good of their kind. But one sort of plough is used. It is strong, light, and cheap, and was introduced soon after 1851, being copied from an English plough which obtained a prize at the first International Exhibition in London. Its cost is 13 florins (£1 1s. 8d.).

The commune possesses 1,030 head of horned cattle (*i.e.*, about 1 to every 7 morgen under cultivation—of these 750 are milch cows, there being a great trade in milk with the neighbouring town of Mannheim; the rest are dry cows being fattened for slaughter, heifers, &c.—200 horses, from 1,000 to 1,300 pigs, and 500 goats. The cattle is entirely stall-fed. The ploughing is mostly done with horses. The very small farmers plough with cows. Oxen are not used for this purpose. A farmer of from 20 to 30 morgen will keep 4 head of cattle—of which 2 will be milch cows, 1 a dry cow being fattened for sale, 1 a heifer—and 2 horses. In the winter he earns wherewith to buy additional food for his cattle and horses by carting timber.

The standard of living is much the same in all classes of the peasant population, except, that at present, wages being very high, the agricultural labourer lives rather better than the smallest proprietor, who tries to economise his food, the former only caring to spend his wages.

* I should add that the excise tax has only recently been imposed, in consequence of a vote of the Customs Parliament, and has naturally excited considerable discontent amongst the tobacco farmers. One of the most intelligent of the class, however, observed to me that he believed the tax would not act to the detriment of the tobacco grower, and that the State would clear the proceeds of the tax, or at least a large proportion, without loss to consumer or producer, merely by a more economic adjustment of productive forces. The tax being levied not *ad valorem*, but on the area under cultivation, would act as a premium on the selection of such lands only as were specially fitted for the growth of tobacco. The land less well fitted for this purpose would be employed in crops for which it was better fitted, and the desire to reduce the percentage of the tax on the value of the crop to a minimum would lead to more efficient and more economical cultivation on these best lands.

The tenements occupied by the peasants and their families are all on one pattern. The farm buildings, consisting of a stable and a large barn, in which grain crops and hay are housed (ricks and stacks being unknown), and the tobacco-leaves are hung to dry, differ according to the size of the property. The house and buildings are mostly of bricks, and slated. Both are remarkable for their great size, which is to be accounted for, partly by the quantity of room required for tobacco drying, partly by the fact that the easement which the commune enjoys in the forest, places abundant materials* at the disposal of the inhabitants.

Every house has a garden in which the young tobacco plants are reared, and the vegetables required for the use of the household are raised. Each house—even the smallest—has an oven for baking, and deems it a point of honour to have its own pump.

The rooms consist of one large sitting-room, in which the family lives and takes its meals. Leading out of this room is the bed-room occupied by the father and mother and the younger children. If the family is a large one, it not unfrequently happens that there is a bed in the sitting-room, which is, however, always screened off by a curtain. The grown-up children of both sexes occupy a separate sleeping-room.

The walls of the sitting-room and bed-rooms are painted or white-washed, and but rarely papered. They are usually white-washed or re-coloured once in two years. The furniture consists of the necessary tables and chairs; of a large cupboard and wardrobe; a large oblong wooden box, gaudily coloured, in which the reserve linen is kept; and a glass cupboard in which the crockery, &c., is exposed to view. A large Black Forest clock, hung in a conspicuous place in the principal room, never fails.

The article of furniture on which the greatest amount of luxury is lavished is the conjugal bed, and the great object of ambition is to heap up this bed with a maximum of feather beds and feather bolsters. I noticed, at an agricultural meeting, the proud and self-confident bearing of one of the speakers, and was immediately told that he had the highest bed in the commune, and required a ladder to get up into it.

The Viernheim peasant eats five times a day. In the morning, on first getting up, he usually takes coffee with milk and sugar, and eats bread. The parents and the younger children each get a small white loaf of wheat flour, the rest brown bread—half rye, half barley. Where the household is less well off, a soup made of flour and milk and boiled potatoes take the place of coffee and bread. Coffee, however, is the rule.

This is his breakfast eaten at home. He takes to his work with him bread, and sometimes cheese, which constitutes his second breakfast, and is eaten between 8 and 10 o'clock, and on this occasion he takes a small quantity of corn-brandy. At 12 he returns home to dinner, which consists, two or three times a week of meat, viz, salt pork and potatoes, and twice a week sauerkraut; in the summer, vegetables and a great deal of salad, dressed with vinegar and rape-seed oil. On Sundays he eats fresh meat, usually cow-beef, first in the shape of soup, then the meat from which the soup has been made. The days on which meat is not eaten the potatoes and veg-

* The timber for building is no longer furnished *in natura*, the Crown finding it cheaper to give a money equivalent, which enables the peasants to build their houses of brick.

tables are supplemented by a pudding, of which flour and milk are the principal ingredients, with butter and eggs according to circumstances. In the afternoon he eats his so-called vespers, *i.e.*, bread and coffee, in the summer and autumn fruit in large quantities. At night he concludes with supper, consisting of a soup of milk and flour and boiled potatoes, or potatoes, butter, and cheese, or potatoes and salt meat. The salt pork is cured at home, each family having one or more fat pigs killed in winter, the event being one of much rejoicing, as furnishing the household with an opportunity of eating fresh sausages and other delicacies.* On *fête* days a large cake is baked which it takes several days to consume.

At home he drinks nothing but his daily quantum of corn brandy (about a gill, neither very strong nor very palatable), except on Sundays, when he drinks beer; but he often goes in the evening to the public-house and drinks 3 or 4 glasses of beer at 3 kreuzers (1d.) a glass. Though in the immediate vicinity of a wine-growing country, he never, except on *fête* days, touches wine.

His clothing is substantial and adapted to the season: in summer, principally composed of linen stuffs; in winter, of heavy woollen stuffs. He wears no national costume, and his dress is of the general nondescript European type.

I heard general complaints of the growing luxury indulged in by the women in the matter of dress, and of their disgraceful attempts to follow the fashions.

Much expenditure and long previous preparation are spent on a bride's dowry. She brings to her new home always one, sometimes two, beds and the furniture of one room, or of half a room, according to her means, also the feather-beds for which many generations of geese, who are yearly plucked for the purpose, have yielded the materials. In addition, she furnishes the house linen, and usually a certain amount of linen cloth in reserve. According as she is rich or poor, the feather-beds and the reserve linen are more or less copious.

The amusements of the peasant are not many or varied. Twice a year there is a village feast—on the name-day of the Church's patron saint and after harvest (the commune is a Catholic one). On these occasions there is music and dancing, and wine is largely consumed. The peasant attends these meetings with all his family. There is little demand for intellectual products. Few newspapers and fewer books supply all that is required in this respect. The agricultural society of the province counts but few members in the township, and but little interest has hitherto been shown for the agricultural lecturers who periodically visit the district. Of late singing clubs, in which part-singing is practised and which the younger men attend, have become popular.

The following are the rate of wages in the township:—

Agricultural wages for men, without board (but frequently with the glass of corn-brandy at the second breakfast, given by the employer), 40 kreuzers (13½d.) a day in summer, 36 kreuzers (12d.) a day in winter. For women, 32 kreuzers (10½d.) in summer, 28 kreuzers (9½d.) in winter. Piece work: reaping grain crops, from 1 florin 45 kreuzers (2s. 11d.) to 2 florins 12 kreuzers (3s. 7d.) per morgen. Mowing grass from 40 to 48 kreuzers per morgen. Hoeing from 1 florin 30 kreuzers to 2 florins a

* The staple of his food, however, consists of potatoes and bread, the daily allowance of the latter being from 2 to 3 pounds for a man, and from 1½ to 2 pounds for a woman.

morgen. With board and lodging, from 80 florins to 140 florins a year for a man, and for a female servant from 45 to 66 florins.

The workman of the township employed in factories at Mannheim, to which they walk in the morning, returning home at night (the distance being about 12 miles there and back), earn from 48 kreuzers to 1 florin 12 kreuzers a-day.

The workmen employed in cigar-making in the township work by the piece, and can earn from 3 to 6 florins a week.

From 6s. to 7s. a week, which may be looked upon as the regular agricultural wages of the locality for male labour, does not appear much at first sight, and I was somewhat astonished at the universal complaints I heard of the ruinous height to which wages had reached. If we consider, however, the labourer's other sources of revenue, we shall see that the Viernheim labourer is very well off.

In the first place it must be remembered that female field-labour is quite as much in request as male, and, for some kinds of work connected with tobacco cultivation, even preferred to it. If the labourer is married, therefore, his wife's wages must be added to his own, which would raise the wages of the family to 10s. or 12s. a week. Of course there is the time taken up with child-bearing and with household avocations; but, even with these drawbacks where labour is so valuable, most women manage to earn a fair amount of money wages during some portion or other of the year.* There are, besides, the earnings of the children, which, during the tobacco harvest, and afterwards in sorting the leaves during the process of drying, are not inconsiderable. In the next place, with some few exceptions, the labourer owns the cottage he lives in, with a garden and land enough to raise the potatoes he requires for his family and his pig, and at a comparatively early date, usually between the ages of thirty and forty, he obtains a lot in the "almende." In every case he obtains from the forest all the fuel he requires for firing. If he cannot keep a cow, he at least keeps a goat or two, so that he is housed and warmed, and produces his meat, his potatoes, his milk, and his vegetables, independently of his weekly cash receipts. But this is not all. He need make no provision for the future, for, as he gets older, he rises from the lower to the higher class in the "almende," and is certain in his old age to be in the highest class, that is, to have the usufruct of 10 morgen of first-rate arable land, which, with the help of his children, he can either cultivate himself or let for between 200 and 300 florins.

The operative employed in manufacturing industry is placed in similar circumstances.

Hence the condition of the Viernheimer who works for wages must be considered as a highly favourable one. That of the proprietor of from 10 to 30 morgen is equally favourable. The class least well off is that of the proprietors who have just land enough to occupy their whole time and prevent their working for wages, but not sufficient to leave a margin wherewith to cover accidents. But even this class, as a rule, are well off,

Though the system of pensioning off parents does not exist to the same extent at Viernheim and in the Plain as it does in the Odenwald, it yet often happens that the old people come to some arrangement with the younger generation, in accordance with which they cede their rights of property to the latter in exchange for their maintenance. Owing to this there are in almost every household old people who can look after the younger children, thus enabling the more vigorous women, married and unmarried, to work in the fields.

for the labour of a household is amply sufficient to produce the requirements of a household, and, like all the other citizens of Viernheim, a proprietor of this class has the prospect of his increasing lot in the "almende." But it not unfrequently happens that the very small proprietor in bad years, or from tobacco speculating, gets into debt, and the absence of margin makes it difficult for him to get out of debt if once in it.

The commune, in its corporate capacity, is in flourishing circumstances. The value of its property, movable and immovable, is estimated at 1,142,709 florins, or close upon £100,000.

The yearly budget of income and expenditure is about 40,000 florins.

Of this only about 1,900 florins (£158) is spent in connection with the relief of the poor. Nor does even this represent the real amount of poverty needing relief, as out of this sum 300 florins a year are pensions paid out of a fund bequeathed to the local charities, which on the death of the pensioners will revert to those charities. The amount put down in the estimates for the current year, as that which will be required for actual disbursements in the way of relief, is only 25 florins for cases requiring permanent aid, and 1,412 for casual cases. The corresponding average for the ten previous years was 1,325 florins. Of the entire sum set apart for poor relief only 852 florins come out of the communal exchequer, the rest being derived from charitable donations.

I need hardly observe that an able-bodied pauper is a being altogether unknown. I even found some difficulty in describing the sort of person respecting whom I desired to obtain information. The sums expended in relief are either devoted directly to the purchase of medicaments, or to the support of the families of persons disabled from work by sickness or some other temporary cause.

The amount paid out of the communal exchequer for the maintenance of the communal breeding establishment of bulls and boars is 1,892 florins, or more than double the amount of poor-rates.

The yearly expenditure on schools is about 4,000 florins.

In the years 1852 and 1853, the commune contracted a debt of 39,980 florins, to enable 100 families, numbering 600 souls, to emigrate to America. This debt is most of it paid off, the commune having for a period of ten years appropriated the proceeds of the common lands ("almende"), which, had they remained in Europe, would have been apportioned to the 100 families, to the liquidation of the debt.

In reply to the specific question as to the number of labourers per acre, it will appear from the above that in Viernheim there are 600 males, 300 described as proprietors, and 300 as labourers, employed in cultivating about 7,000 morgen, *i.e.*, about 4,000 English acres, or about 1 to every $6\frac{2}{3}$ acres. As quite as many women, however, are employed in field labour as men, if not more, there would be a proportion of about one pair of full-grown hands to every three acres, besides a corresponding number of children.*

* The impossibility of obtaining any satisfactory statistics to the exact number of labourers and proprietors employed per acre in the cultivation of the soil, is well illustrated in the case of Viernheim. In a sort of rough way, out of the 1,000 citizens, 300 are classed as proprietors, 300 as labourers; but from the description above given, it will appear not only that these two classes are constantly encroaching on each other, but that the greater number, if not the whole, of the operatives belonging to the township, either themselves in their spare hours, or by means of their families, are partially occupied with the cultivation of land.

Such is the picture of a very flourishing commune under peasant cultivation, in the fertile plain on the right bank of the Rhine. The land is parcelled, but not in excess, a quarter of a morgen being the smallest parcel, and the usual size of the parcels being from one-half to an entire morgen. The amount of common land apportioned in "almende" is very much above the average, and the easements which the commune owns in the forest are exceptionally valuable. The situation of the township—from its vicinity to an important town with rising manufactures—is, moreover, peculiarly advantageous, both as providing a ready market for every kind of produce and as furnishing an outlet for any surplus labour. The general circumstances of the community must, therefore, be taken as peculiarly favourable to peasant farming. My visit having been in winter, when the ground was covered with snow, I was unable to judge of the general appearance of the cultivation; but I have no reason to believe that it differs from that of the surrounding districts in which tobacco is grown, and with which I am acquainted. The very careful cultivation which that plant requires impresses a garden-like character on the country, especially where it is planted in small patches, intermixed with others, in which hops and other valuable products are raised. The appearance of such districts contrasts favourably with the monotonous parallelograms in which grain crops alternate with potatoes, turnips, and clover.

The appearance of the township itself is in the highest degree bright and cheerful. The unusual size and roominess of the buildings have already been dwelt upon and accounted for. They all seemed as if but lately whitewashed, and I could detect no habitation even distantly resembling a hovel: fine large two-storeyed dwellings, with the look of town houses, which struck me by their peculiar neatness and brightness, I found on inquiry to be the property of operatives working at Mannheim.

The farm-yards and stables, on the other hand, were not as neatly kept or clean as, from the looks of the dwelling-houses, I should have been led to expect, and very inferior in this respect to the farm-yards of Swiss peasant properties of a corresponding size.

Great care was bestowed upon the manure, and each yard had a covered tank, in which the liquid manure was collected, and a pump with which it was pumped on to the dunghheap.

The inhabitants had more the look of townspeople than peasants; not but that they were sunburnt and hale, as men employed in out-door work, but they had that certain indescribable wide-awake expression which can apparently be only given by constant intercourse with one's fellow-men, coupled with a certain variety and many-sidedness of occupation. The town-like character of the village, and the constant business intercourse with the neighbouring large towns, would sufficiently account for this character.

The school children all looked remarkably healthy, well-fed and well clothed—the boys in stout cloth jackets, the girls in warm woollen frocks.

The most vivid impression which I carried away with me from Viernheim was the equable manner in which the wealth of the place appeared to be distributed amongst its inhabitants. The whole population seemed to be on the same level of material comfort and well-being. I could not bring back to my recollection any sight or sound denoting the presence of a squalid class, or any indications pointing to a higher or a ruling class.

Nevertheless, one could not but feel that, with so solid a basis of material prosperity, there was, on the score of culture, great room for improvements. One felt disappointed that so few of the inhabitants should care about that which in Germany decides the status of the individual, viz., a liberal education; and that so many parents, rich enough to send their children to a higher class of school, should be content with the very elementary education given in the national school. Such a fact as the habitual occupation of the same sleeping apartment by the grown-up children of both sexes, even in the case of well-to-do farmers, struck one as denoting the absence of a higher standard of civilisation. In a word, one felt that, immense as was the contrast between the villein of the commencement of the century and the free proprietor of the middle of the century, the traces of the former state were not altogether obliterated, and that the peasant had not yet reached the point at which another generation will undoubtedly land him.

I will next proceed to the description of the Commune of X in the Odenwald, as affording a marked contrast to that of Viernheim.

Instead of being on the plain, it is high up in the mountains; instead of being within easy reach of a railroad and an important town, it is near no town and separated by about twenty miles of mountainous road from the nearest railway; instead of being under parcel-cultivation, it consists principally of consolidated farms; instead of the equal division amongst the children at the death of the father, the eldest son, in accordance with an ancient custom which is stronger than the law, comes into the enjoyment of the property during his father's lifetime, the latter, when getting too old efficiently to look after the property, being pensioned off, and the younger sons working as servants to the elder.

The Commune of X contains 534 inhabitants, of whom 115 are citizens, which gives a proportion of rather more than 4 women and children to 1 grown-up man, as compared to the 3 to 1 of Viernheim. Of these 115 citizens, 20 are proprietors of large farms, or so-called "Bauern" or full peasants; 20 are smaller proprietors, or so-called "Küh-Bauern"—cow-peasants (*i.e.*, 10 of them owners of 2 cows each, 10 of 1 cow each); the remaining 75 are agricultural labourers or artisans. I cannot state exactly what is the number of the latter class, which consists of shoemakers, tailors, and such handicraftsmen as are required to supply the wants of a small community; but I doubt whether it exceeds 15 or 20, which would leave from 95 to 100 full-grown men, with a corresponding number of full-grown women, as the full-grown labour force of the community.

The area of the "Gemarkung" contains 2,682 morgen, distributed as follows: 1,113 arable land, 518 meadow, 299 communal forest, leaving 752 morgen for the space taken up by roads, farm-buildings, gardens, orchards, as also by forest owned individually by the proprietors of the larger farms. The farms I visited had each of them from 10 to 15 morgen of forest belonging to them, and probably the others had a like proportion.

The 20 larger properties are as nearly as possible equal in size, each containing about 75 morgen of arable and meadow land. One of the number only comprised as much as 90 morgen. There are, besides, two properties of this class which have been subdivided. The properties of the small peasant, or so-called cow-peasant, run from 5 to 15 morgen.

There is no "almende," it having been all divided amongst the proprietors in 1826.

The only communal property is the communal forest.

The community possesses 284 head of horned cattle (of these 117 are milch cows, 153 are beasts, heifers, &c., 12 are draught-oxen, and 2 are bulls), 40 horses and 5 foals, 3 donkeys, 75 sheep, 25 goats, and 184 pigs.

The cattle is stall-fed. The meadows lie mostly near the farm-houses, and furnish abundant green food. The sheep are pastured in winter on the stubble of the community, in a common herd. In summer they are provided for by their several proprietors.

The following is the rotation of crops:—

(1) Potatoes or turnips, with manure; (2) Rye or spelt; (3) Barley, sown with clover, mixed.

One copious manuring once in three years, from 10 to 12 loads to the morgen; the third or fourth year a light intermediate manuring.

The food of the peasant consists in the morning of coffee and bread or potatoes; at mid-day usually of meat (principally pork), potatoes, and vegetables—the days on which meat is not eaten there is the usual pudding of flour, eggs, and butter; at night, potatoes and sour milk or coffee. On fête days the never-failing cake is baked, and in autumn a large provision of a kind of jam made of pears, mixed with other fruit, is made, which contains much saccharine matter, and is eaten with bread instead of butter. Most of the larger proprietors employ, in addition to the members of their family, two men and two maid servants, who receive respectively from 80 to 90 and from 40 to 50 florins a-year, besides their board and lodging, and usually some small present in the way of dress at Christmas. They board with the family, and consequently partake of the same food.

The wages of day labourers, without board, are for a man from 30 to 36 kreuzers a day; for a woman, from 24 to 30 kreuzers.

The peasant proprietor in the commune of X, comparatively large as is his property, and well off as he undoubtedly is (more than one was pointed out to be worth from 30,000 to 40,000 florins—£2,500 to £3,500—laid out chiefly in mortgages in neighbouring communes), contrasts unfavourably with his neighbour in the plain. With but one or two exceptions, none of the tenements and farm-buildings which I saw had the fresh and cheerful air which so struck me at Viernheim. Some had even a dilapidated appearance; in every case the farm-yard was in the highest degree untidy and slovenly. The plough and other agricultural implements were lying helter-skelter about the place; the manure was thrown carelessly into the yard in uncomely heaps; there was no tank or reservoir for the liquid manure, which in most cases seemed running to waste. The interior of the dwellings, though not denoting poverty, but the reverse (there were large fires burning and a pleasant activity going on in the kitchen), was not of a kind to impress one with the idea that material prosperity had refined the manners of the inhabitants. The richest amongst the proprietors—men who, according to German standards of living, could have well afforded to give their sons a university education—did not appear in any way to differ from the ploughmen and shepherds in their employ. In a word, the citizens at X are, as compared with the Viernheimers, emphatically country-folk—peasants—“Bauern,” not in the invidious sense which we associate with the term “boor,” but with just a shade of that sense clinging to the name. There seemed to me, however, to be a marked difference between the older and the younger generation. In the older I could not but discern,

or fancy that I discerned, traces of the peculiarities which impress themselves on a disenfranchised class—distrust and cunning, and an abiding sense that over-reaching is the normal condition of men's intercourse with each other; something, in fact, of those hang-dog looks and ways which are universally associated with the unfree peasantry of the close of the last and the beginning of the present century. In the younger generation all this seemed to have passed away, and to have been replaced by a sense of self-confidence, a greater amount of general intelligence, and the bearing of men who were conscious of no longer belonging to a caste, but of enjoying the full rights of equal citizenship. This especially struck me in the case of a young farmer who had lately come into his inheritance, and had begun by pulling down the family tenement and farm-buildings, and replacing them by a solidly-built and handsome two-storeyed house, with corresponding farm-buildings, which were on the point of completion, and proclaimed, in language not to be mistaken, how much higher was the standard of living to which the present generation laid a claim than that with which their ancestors had been content.

The two communes I have hitherto described lying both of them in the Province of Starkenburg, I will, lastly, give the following data respecting the Commune of Soedel in the Wetterau, a rich plain district in Upper Hesse.

The Commune of Soedel is under parcel cultivation. Its area contains 2,409 morgen, of which 54 morgen are "Almenden;" 1,400 morgen are the property of peasants; 291 morgen are the property of Prince Solms, one of the great mediatised landlords who formerly exercised manorial rights over the commune; and 608 morgen are forest, belonging to the communal exchequer.

Of this land, 1,629 morgen are arable, 59 morgen meadow, 51 morgen gardens.

There are 640 inhabitants, of whom 175 are citizens; of these 53 are classed as proprietors, 47 as agricultural labourers.

There are three larger properties in the commune, each of about 150 morgen, cultivated by a more educated class of proprietors. The average size of the remaining properties is about 30 morgen. The property of Prince Solms is let out to 18 peasants, in farms averaging about 20 morgen each.

A quarter of a morgen is the size of the smallest parcel: as a rule, the parcels run from 2 to 10 morgen.

The commune possesses 256 head of horned cattle (*i.e.*, about 1 to every 6 morgen), of which 157 are cows; 44 horses, 180 sheep, 243 pigs.

There is a three years' rotation of crops, with copious manuring every third year (*viz.*, 120 cwt. of stable manure to the morgen), and lighter manuring with liquid or artificial manure the intervening years.

The average crop per morgen is as follows:—

					Malters.
Wheat	6
Rye	6
Barley	8
Oats	8
Potatoes	35 to 40

The food of the Soedel peasant (and here likewise the food of the agricultural labourer is not different from that of the proprietor) is as follows:—

First breakfast.—Coffee and bread, with butter, or jam made of pears or plums.

Second breakfast.—Bread, with cheese or butter.

Dinner.—Soup, vegetables, and meat, or soup and farinaceous pudding.

At 4 o'clock.—Coffee, bread, and butter or jam.

Supper.—Potatoes, with milk, and butter or cheese, or potatoes and salad, sometimes with meat or sausage.

The forest brings in about 6,000 florins a-year to the commune. Each citizen receives 20 florins' worth of wood a year.

A man's wages without board are 50 kreuzers a day, a woman's 40; with board, respectively 26 and 16 kreuzers.

As will be seen by the copious manuring, the large returns per morgen, the standard of living, and the rate of wages, this commune is very well off and highly prosperous.

This must conclude my sketch of peasant holdings in the provinces on the right bank of the Rhine. I had hoped to complement it by an equally detailed survey of communes in the Rhine Province, as, by common consent, the state of agriculture on the left bank of the Rhine is immensely superior to that on the right bank, and probably yields the highest results anywhere attainable under peasant cultivation. Unfortunately the necessity of bringing this Report to a conclusion within reasonable limits of time has not afforded me the opportunity of doing so, and my acquaintance with the Rhine Province is limited to two hurried excursions.

These were, however, sufficient to convince me of the very much higher level attained by the agriculture of the province, and I shall avail myself of the information gathered on those occasions in my concluding remarks.

Transfer, Hypothecation, and Descent of Land.

In the provinces on the right bank of the Rhine, so-called "acts of voluntary jurisdiction,"* *i.e.*, judicial acts by which transactions of the nature of contracts, &c., obtain their legal validity, are performed by the public Courts. In Rhine Hesse the system of notaries public prevails.

In the former provinces the procedure in reference to the sale and transfer of land is as follows:—

For each sale or transfer the instrumentality of two Courts is required, viz., that of the Communal Court (the "Orts Gericht") in which the estate is situated, and that of the Court of the district ("Land Gericht") in which the commune is situated.

This double mechanism appears at first sight to be cumbrous and complicated, but this is not the case in practice. On the contrary, the distribution of functions between the two Courts, arising, as it does, from natural causes, and adapted, as it is, to local requirements, materially conduces to the extraordinary rapidity, facility, and cheapness with which transfers of land are effected in the Grand Duchy.†

* The term "Freiwillige Gerichtsbarkeit" (*jurisdictio voluntaria* in contradistinction to *jurisdictio contentiosa*) is used in German legal phraseology to denote such judicial acts as have no reference to contentious litigation, but are required to give to a transaction legal validity, *e.g.*, affidavits, legalisation of wills, &c. In such parts of Germany as are under French law, as well as in some others, this jurisdiction is delegated to notaries public; in other parts of Germany it is exercised directly by the public Courts.

† It must not be forgotten that the Local Court supersedes the action of the private conveyancer. It is, as it were, a conveyancer's office established at every proprietor's door, doing business according to a minimum scale of fees to express which in English coin we must have recourse to farthings.

The difficulties which had to be overcome, and which were sufficiently overcome, by the double mechanism of the two Courts may be thus stated :—

To effect a transfer by registration, the authority under which the transfer takes place must be a competent one, a condition not fulfilled by a Court like the "Orts Gericht," composed in rural districts of peasants ignorant of law, and only capable of performing the most rudimentary legal acts. It was therefore necessary to invest the higher Court with this authority.

On the other hand, it was equally necessary that the Land Register, in which the transfer takes place, should remain a strictly communal institution and in the hands of communal officers. For the Land Register constitutes, so to say, the agricultural ledger of the community, whose utility depends upon its accessibility, and upon the thorough knowledge of its contents possessed by the members of the community, and especially by the persons in whose custody it lies. This knowledge, possessed in an eminent degree by the Local Court, which is composed of men born and bred in the commune, is of a kind necessarily inaccessible to the members of the higher Court.

It was necessary, therefore, to find some means of effecting the transfers under the authority of the higher Court without delocalising the Land Register, or dispensing with the local knowledge which the lower Court alone could furnish, and this was done by the law instituting the "Mutations Verzeichniss," or Protocol of Transfers.*

By this law the transfer is effected by a judicial act which takes place at the District Court, and, as this cannot be done directly in the Land Register, which does not leave the custody of the Local Court, it is effected in the Protocol of Transfers, which, by a legal fiction, is identified with the Land Register. Once every six months the entries in the Protocol of Transfers are copied, under the responsibility of a Government officer (the Commissioner of Taxes of the district), into the Land Register. In the eye of the law, however, the land passes by the transfer in the Land Register.

The evidence upon which the District Court acts is furnished, as the sequel will show, by the Local Court, which is responsible for the issues of fact, while the District Court is only responsible for the issues of law.

As the entire system, not only of the transfer but also of the hypothecation of land, depends on this Land Register, it is necessary to describe it in detail.

From a very early period there existed in the territories of the Land-graves of Hesse a rough cadastration for the purposes of public taxation, and, corresponding to this cadastration, there was deposited in each commune a so-called "Flur" (or field) "Book," containing a topographical register of the properties of the commune, which was not, however, at that time used as a record of titles.

This rough cadastration was supplanted by an accurate trigonometrical survey commenced in 1824, and by the law of the 21st February, 1852, it was enacted that the Field Books prepared, or to be prepared, on the basis of this new cadastration, should assume the character of registers for the transfer of land and for the proof of titles.

* It is difficult to find an English equivalent for a technical term descriptive of a thing which has nothing corresponding to it in England. The characteristic of the "Mutations Verzeichniss" is that it is substituted provisionally for the real record of transfer, viz., the Land Register. It might be described as being to the Land Register what the day-book or journal of a mercantile house is to the ledger.

The original maps are deposited in the Office of Cadastration. Duplicate *fac-similes* of the map of each communal district ("Gemarkung") are deposited in the Local Court, and constitute the basis of the Land Register. Each district is divided into so many "fluren," or fields, each field into so many parcels or items. The unit is consequently the parcel, but these units are arbitrary. They are partly transfers from the old Field Books; partly new creations consequent upon sub-divisions which have taken place since the new Land Registers have been in force. They vary in every possible degree, from a few perches to a number of acres; sometimes an entire establishment—house, stables, farm-buildings, garden, orchard—being entered as one parcel, sometimes each of these being entered as a separate parcel.

Each field has its separate volume in which the parcels are entered in consecutive numbers, corresponding to the numbers of the parcels on the map. Annexed is a transcript from the pages of a Land Register.

Fully to understand this Register, it must be borne in mind that it takes the shape of a large folio volume, the left page of which is filled by the columns from 1 to 6 inclusive, and the right-hand page by columns from 7 to 12.

The left page represents the parcel at the time of the creation of the Land Register. The right page records the change which the parcel undergoes.

It will be observed that the basis of the Register is the topographical division of the "Gemarkung;" not the person owning, but the object owned, being the unit.* Each "Flur" has its own volume, and each parcel has its entry in this volume. But this system is supplemented by an alphabetical register of the owners, with a reference against each name to the volume of the Land Register. Annexed to the Register are the duplicate maps of the "Gemarkung." The one copy corresponds to the left page of the Register, and represents the "Gemarkung" at the time the Register was created. It can, under no circumstances, be tampered with. The second copy is destined to have the alterations resulting from sub-divisions of the parcels recorded in it. These maps are on the scale of $\frac{1}{800}$, and the minutest alterations can therefore be entered on them. They are masterpieces of cartographical art.

When the survey of a communal district is concluded care is taken that the new Land Register, which is to take the place of the old Field Book, shall contain an accurate record of titles. For this purpose, the entries are made by the district court. Where no title-deeds are forthcoming, so-called "Edictalia," or proclamations, are published in the Gazette, calling upon any persons who may have claims against the parties in possession to make good those claims by a certain day. If no such claims are put in, the actual possessor obtains a certificate to that effect from the district court, which affords the title-deed in virtue of which his name is entered on the Register, and a *presumptio juris* is created in his favour. If claims are put in, they form the subject of investigation, pending which the possessor's name is entered on the Register, with an entry in column 10 to the effect that his rights are disputed.

After all the property in the commune has, under the careful scrutiny of

* The reverse of this is the case in Prussia, where the Land Register is engrafted on the Mortgage Register, whereas in Hesse the Mortgage Register is engrafted on the Land Register.

						Description of Owner, and his Title.										

* The division into "Gewanne" is antiquated, and the term is only retained to localise the "Flur" or field.

† "Klafter" is equal to 100 square Hessian feet.

‡ This limitation of proprietary rights is of three kinds: "Beschränkt" (limited); "Gehemmt" (hindered); "Streitig" (contested). The first ("Beschränkt") has reference almost exclusively to the case in which the buyer pays for the property in instalments, the vendor, until these instalments are paid off, retaining a dormant ownership (*dominium reservatum*) analogous to our "vendor's" lien. The second ("Gehemmt") presupposes some inhibitory measure on the part of a Court of Justice, in view of possible litigation, similar to a "writ of distringas" on stock in England. The third "Streitig" presupposes actual litigation, corresponding to our registration of *lis pendens*.

§ "These rent charges have reference to the commutation of customary services, &c., described in the early portion of this paper.

the district court, been entered on the Register, notice is given that the latter will be exposed to public inspection during a certain number of weeks for the rectification of errors. After this period has elapsed and all errors have been rectified, the Register is duly legalised by the district court, and a *presumptio juris* is established in favour of all the registered proprietors against whose names no limitations of proprietary rights are entered. Five years after the date of legalisation, if these titles have not been impugned, the *presumptio juris* becomes a *presumptio juris et de jure*, and the titles are indefeasible.

I can now proceed to explain the method of procedure observed in the sale of land, and, in order to facilitate the task of description, I will suppose a particular case, a vendor (A) and a buyer (B) in a commune (X).

A and B would present themselves before the local court of X, and declare that A had agreed to sell, and B to buy, ten parcels of land, numbers from 1 to 10 in field 3.

A would at the same time produce documentary evidence of his title. The court would thereupon examine Vol. III. of the Land Register, in which it would be found whether the description given by A corresponded to the registered facts; and such questions would be put as—together with the information furnished by the Land and Mortgage Registers, assisted by the local knowledge of the court—would enable the latter to answer a printed form of interrogatory, which it is the business of the local court to furnish to the district court.

The questions in this interrogatory are the following :—

1. Are the objects to be sold the property of A?
2. Are any of these objects held under “Erbleih” or “Landsiedel” tenures, or parts of entailed properties?
3. Has A produced a legally certified document in evidence of his title? and what is the date of the document? *
4. Is A and, if married, is his wife twenty-one years of age? Are either of them under wardship for extravagant habits or mental deficiency?
5. Are there any mortgages, and if so, what mortgages, on the objects to be sold, and who are the mortgagees?
6. Are there any arrears of payments in regard to a previous sale charged on the estate?
7. Are there any other private charges on the estate?
8. Are there any arrears of land-tax, or other public or communal charges?
9. Is A married? Is it his first or second marriage? What children are there from his first marriage, and have they attained their majority?
10. Is A's wife co-proprietress in the estate sold?
11. Are the children of the first marriage heirs to the estate?—or—Was the estate acquired in a former marriage?
12. As far as is known, are the objects sold the subject of litigation?

After being duly filled up, this interrogatory would be certified as follows :—

November 10, 1869.

The President of the Grand
Ducal Local Court,
(Signed) MULLER.

The Assessors,
(Signed) SCHULZE.
SCHMIDT.
FENNER.
BIEHL.

* This is sufficient information for the District Court, as, if A is able to produce any kind of document, the original, or a copy, must be in the possession of the District Court.

When this interrogatory has been duly certified by the Court, the following so-called "Kaufnotul," or protocol of sale, is drawn up:—

PROTOCOL OF SALE

between A and B,

Done at X, this 10th day of November, 1869.

There appeared this day before the Grand Ducal Local Court and made declaration—

A, the vendor, that he had sold to B, the buyer, and B, the buyer, that he had bought from A, the vendor, for the sum of 1,200 florins, the parcels of land described on the opposite page, under the following conditions.—

1. The payment is to be made in three yearly instalments, 5 per cent. per annum being charged for the money still due.

2. The property is to be made over to the buyer on the 1st of January, 1870.

3. Until the instalments have all been paid up, A's right of ownership is reserved (*dominium reservatum*).

4. The cost of the protocol of sale and of the interrogatory is borne by A. The cost of the deed of sale is borne by B.

5. B becomes responsible for taxes from the 1st of January, 1870.

BIEHL.

The Local Court then transmits this protocol, accompanied by the answers to the interrogatories, and a certified extract from the Land Register, to the District Court.

From the answers to the interrogatories, the District Court at once perceives whether or not there are any legal impediments in the way of the sale. It undertakes no responsibility, however, for the correctness of the answers given. It assumes them to be correct, and decides on their merits. For any mistakes in these answers the Local Court is alone responsible, and should losses accrue from any mistakes of theirs, the officers of the Court are personally liable for the loss.

If there is no impediment in the way of the sale, the District Court makes a minute of the transaction, from which a deed of sale (*Kaufbrief**) is drawn up, signed by buyer and vendor, and certified by the District Court. The Court simultaneously enters the transaction on the Protocol of Transfers, and the transaction is concluded, except that at the close of the half-year the entry in the Protocol of Transfers has to be transferred to the Land Register. This, however, in no way affects the validity of the transfer, which was finally and definitively accomplished when the entry was made in the Protocol of Transfers, which protocol during the half-year is identical with the Land Register.†

I will now examine what the whole procedure has cost; and for this purpose I will suppose that the property consisted of 4 morgen in 10 parcels, and that the price paid was 1,200 florins, or £100.

The costs fall under two heads—those in connection with the Local, and those in connection with the District Court.

I. COSTS in connection with Local Court.

	Fl. ‡ kr.
1. Fee for the Protocol of Sale ("Kaufnotul") ...	0 20
2. Fees for the Interrogatory :—	
(a) For first parcel :—	
Burgomaster	0 12
Each Assessor 6 kreuzers, therefore 4 Assessors	0 24
(b) For the following parcels :—	
2 kreuzers per parcel for the Burgomaster, for	
9 parcels therefore	0 18
1 kreuzer per parcel for each Assessor ...	0 36
3. Stamp on certified extract from Land Register ...	0 6
	<hr/>
	1 56

* The "Kaufnotul" drawn up by the Local Court is, as it were, the draft form of the "Kaufbrief" drawn up by the District Court.

† Whether the land passes by the "Kaufbrief," or by the Registration (though I believe, the law intends it to pass by the Registration) is a question of purely speculative interest, as the two things are necessarily inseparable and simultaneous, being part of one transaction.

‡ The florin is equal to 20 pence. There are 60 kreuzers in a florin, therefore 1 kreuzer is equal to $\frac{1}{60}$ farthings. Twenty kreuzers, the fee for the Protocol of Sale, would be about 7d.

II. COSTS in connection with District Court.

	F	kr.
1. Stamp on Deed of Sale ("Kaufbrief")	5	30
(The tariff of stamps begins with 2 florins 15 kreuzers, or $2\frac{1}{4}$ per cent., for a sale amounting to 101 florins; it goes on diminishing with each 100 florins up to 600 florins (£50), when it amounts to 4 florins, or $\frac{2}{3}$ per cent. After 600 florins it amounts to 15 kreuzers per 100 florins, or $\frac{1}{4}$ per cent. After 5,000 florins it amounts to 1 florin per 1,000, or $\frac{1}{10}$ per cent.)		
2. Fee for entering into Protocol of Transfers, 2 kreuzers per parcel	0	20
3. Fee for Transfer from Protocol of Transfers to Land Register, 3 kreuzers per parcel	0	30
	6	20
Costs in connection with Local Court	1	56
Total	8	16

The vendor and buyer between them, therefore, have had to pay about 13s. 8d. as the entire cost to them (for there are no lawyer's charges in the background) of the transfer of £100 worth of landed property—*i.e.*, between $\frac{1}{2}$ and $\frac{3}{8}$ per cent. of the value of the property. But it must be remembered that of this sum, 5 florins 36 kreuzers, or 9s. 4d., are stamp duty, so that the cost of the transaction itself is only about 5s.*

A precisely similar course is followed in regard to the exchange and division of properties as in regard to their sale; only where a division takes place the District Court requires an additional document in the shape of a so-called "Messbrief"—*i.e.*, a certified survey of the parcel to be divided, with the proposed divisions entered upon it, on the same scale as that of the map appended to the Land Register.

It is from the survey thus furnished that the alterations at the end of six months are made in the Land Register and its annexed map.

These surveys are made by sworn surveyors, and their cost is exceedingly moderate, the tax being 12 kreuzers a parcel—*i.e.*, for each new parcel caused by the division; but, if the parcels are fewer in number than would make up one day's pay of a surveyor, he is paid by the day at the following rates:—

A surveyor of the 1st class, that is, licensed to survey lands of any extent, 3 florins a day.

One of the second class—*i.e.*, licensed to survey up to 100 morgen—2 florins a day.

One of the 3rd class, *i.e.*, who is not licensed to survey more than 25 morgen, 1 florin a day.

* Compare with these charges those current in England as enumerated in the "List of Purchasers' Expenses," printed on page 209 of the "Systems of Land Tenure," published by the Cobden Club ("Land Tenure in England," by Wren Hoskyns). According to this list, the purchaser's expenses, irrespective of the vendor's, and of stamp duty, would for the transfer of £100 worth of land be £23 14s. 3d.

Hence the costs incurred in connection with the ordinary deparcement of peasant properties do not exceed a few shillings.

The same mechanism is employed for the mortgaging of land as that used for its sale and transfer, viz., the double action of the Local and the District Court.

The Local Court keeps the Register of Mortgages, estimates the value of the objects to be mortgaged, and furnishes all the particulars which enable the District Court to issue the mortgage debenture ("obligation") and to authorise the Local Court to enter the mortgage on its Mortgage Register.

The following is the mode of procedure :—

A, wishing to raise 7,000 florins on his property in the commune of X, presents himself at the Local Court with the documents which evidence his title.

Exactly the same process of investigation takes place as that described in the case of a sale or transfer, except that in addition to the interrogatory (which is only slightly different) the Local Court undertakes, by means of its sworn valuers, to estimate the value of the property.

I will suppose that in the present case A's property is by the Local Court valued at 13,000 florins. A thereupon receives a certificate to this effect, signed by the Local Court.

The valuation so certified is inscribed at the head of the formula which contains the answers to the interrogatory. With this document in his possession A has no difficulty in finding a mortgagee, as the latter, in virtue of the document aforesaid, is placed on the authority of the Court in full possession of all the circumstances connected with the property proposed to be mortgaged. When the mortgagee has been found, his name is entered in a blank left for that purpose in the formula, and this one document, with a certified extract from the Land Register, is sufficient to enable the District Court to issue a mortgage debenture, signed by the mortgagor and certified by the Court. The District Court then issues an order to the Local Court to enter the mortgage on its Register of Mortgages. This order, and the certificate of the Local Court to the effect that it has entered the mortgage on the Mortgage Register, are engrossed on the mortgage debenture, which likewise contains, as integral portion of itself (i.e., not merely as an enclosure, but sewn in with it), the original formula, with the certificate of valuation and the interrogatory, and the certified extract from the Land Register, the whole constituting a full record of the transaction and the mortgagee's security for his debt.

I should observe that the mortgage is only effected, and the mortgagee's claims against the mortgagor only arise, after the mortgage has been entered on the Register of Mortgages. Similarly the debt is only extinguished by being cancelled on the Register.

The cost of the proceedings are as follows :—

I. LOCAL COURT.

1. Valuation fees :—

(a.) Where the value does not exceed 500 florins :

For the President of the Court	0	15
For each assessor	0	10
For the servant of the Court	0	3

Fl. kr.

					Fl.	kr.
(b.)	Where the value is more than 500 florins and less than 1,000 florins:—					
	For the President	0	30
	For each assessor	0	20
	For the servant	0	6
(c.)	Where the value is more than 1,000 florins:—					
	For the President	1	0
	For each assessor	0	40
	For the servant	0	12
2.	Fees for Interrogatory:—					
	President...	0	15
	Each assessor	0	6
3.	Fee for entry into Register of Mortgages:—					
	President	0	15
	Each assessor	0	6
4.	Extract from Land Register:—					
	Stamp	0	6
5.	Stamp on Paper of Valuation	3	30

2. DISTRICT COURT.

As in the case of sales and transfers, the District Court makes its charges in the shape of stamps, which partly cover its outlay—partly represent public revenue.

The mortgage debenture bears one stamp, which varies in an ascending scale according to the amount of the mortgage.

I subjoin the following costs taken from a mortgage of 7,000 florins (about £580) on a property valued at 13,000 florins:—

		Fl.	kr.
1.	Costs of Local Court:—		
	Under heads 1, 2, 3, 4, 5, (see previous page) ..	5	46
2.	Costs of District Court:—		
	1 stamp of the value of 11 florins ..	11	0
		<hr/>	
		16	46

or about 1 $\frac{1}{10}$ per mille of the amount of the mortgage.

There are no means of obtaining exact information as to the amount of mortgages by which peasant proprietors are burdened. The grand total of mortgages on the Mortgage Register of each circle are yearly added up, but, as the circle includes both town and country, and Registers include large properties as well as small, these gross totals afford no data to go by.

In the communes which I visited I found a very great difference prevailing—in some the properties being largely mortgaged, usually as the result of debts incurred in buying additional land; in others only slightly, in others not at all. In some the proprietors had large sums lent out on mortgage in neighbouring communes.

The present rate of interest varies from 4 to 5 per cent. It has been steadily rising; and one cause of this rise is attributed to the increasing

facilities for investment in foreign funds, and especially in American greenbacks, which, owing to the frequent intercourse between the agricultural population of the Grand Duchy and the German settlers in the United States, have acquired great popularity.

The mortgage registers, by enabling the small proprietors to obtain money on mortgage at the usual rate of interest, and with very little trouble, appear to afford all the facilities required for raising *bond fide* loans, either for the purpose of buying off family charges or for the improvement of the property; on the other hand, I have heard frequent complaints of the want of agricultural credit for the smaller and every-day operations connected with agriculture, and there are various schemes afloat for supplying this want, by means of rural banks specially adapted to the requirements of small proprietors. In some of the townships I visited there were credit banks established on the Schulze Delitsch principle; but, though eagerly used by the artisan population in those townships, the purely agricultural population had not taken kindly to them.

In the Rhine Province it is the Code Napoléon which is in force. In the other two provinces the Roman law is in force, viz., *ab intestato* the children, or their heirs in a descending line, inherit in equal proportions; after these the ascending and collateral lines, according to the degree of their affinity.

Where the owner makes a will, he can leave his property to whom he pleases, with the exception of the so-called *pars legitima*, to which the children, unless disinherited by a judicial Act, have an absolute right. The *pars legitima* is equivalent to one-third of the property where there are four or fewer children, and to one-half where there are more than four children.

In the districts in which the consolidated farms previously described are situated, immemorial custom has ruled that the property in its entirety descends to one child, almost invariably the eldest son, and the younger children do not avail themselves of their undoubted right to claim their *pars legitima*, though it is, of course, usual that some sort of provision is made for them.

Where "Erbleih" tenures still exist the farm, whether consolidated or in parcels, is inherited by one child.

With these exceptions the almost universal rule is that the children inherit in equal proportions. I found in every district which I visited, the Odenwald excepted, that this was a point on which a very strong public opinion existed, and that cases in which parents availed themselves of the power given by law to bequeath their property unequally were almost if not entirely unknown. In Rhine Hesse this feeling is especially strong, and I could not hear of a single instance in which a father had used the power given him by the French law of disposing of one-fourth of his estate for the special benefit of one or other of his children.

Population and Emigration.

The statistics of the Grand Duchy do not enable me to answer these questions exactly as they stand.

As I have before had occasion to observe, the peasant proprietor, the peasant tenant, and the agricultural labourer fade away imperceptibly into

each other, and it would be impossible for the most careful system of statistics to group them into separate categories.*

Of the class who derive their principal maintenance from daily wages the majority own at least a cottage and a garden, probably in addition to this a parcel or two of land, or they obtain such parcels in their turn out of the common lands, or they lease them from the commune, or the school, or the church, or from a large proprietor. On the other hand, many proprietors whose principal source of income is derived from their estate occasionally work for hire. Of the land farmed in parcels probably by far the largest part is leased by peasant proprietors, who cultivate the parcels they lease in addition to those they own.

I will therefore treat of the peasant population generally, and include in the term "proprietors," tenants and agricultural labourers.

The tenants who hold large consolidated farms are so few in number that it would be idle to talk of statistical information in regard to them. Any information of the kind required would assume in their case the shape of private details respecting a limited number of families.

The statistics of population in the Grand Duchy of Hesse since the year 1816 yield the following results:—

Number of inhabitants :—

Urban—

1816	182,206
1834	230,357
1861	283,953

Rural—

1816	447,329
1834	530,408
1861	572,954

Increase expressed in percentage :—

Urban—

				Per cent.
1816—1834	26.42
Yearly average	1.29
1834—1861	23.26
Yearly average	0.77

Rural—

1816—1834	18.57
Yearly average	0.97
1834—1861	8.02
Yearly average	0.28

or, to express the same facts in a different form :—of every 1,000 inhabitants in 1816, 289 were towns people and 711 were country people ; in 1861, 331 were towns people and 669 were country people.

The above figures show :—

1. An extraordinary diminution in the rate of increase during the second period (1834—1861) as compared with the first period (1816—1834):—viz., in the urban population 1.29 per cent. per annum, in the first

* According to the census of 1864, out of a total of 853,316 souls, 547,993 constituted the rural, and 275,145 constituted the urban population, i.e., respectively 66.6 and 33.4 per cent. According to the same census there were 145,263 proprietors of land, and 107,764 agricultural labourers. How many individuals were included in both classes there are no means of ascertaining.

period, as compared with 0·77 per cent. per annum in the second period, and in the rural population 0·94 in the first as compared with 0·28 in the second.

2. A very much larger proportionate increase during both periods in the urban population than in the rural population :—viz., during the first period 1·29 per cent. per annum in the urban as compared with 0·94 per cent. per annum in the rural population, and in the second period 0·77 as compared with 0·28.

This disproportion, moreover, is one which is rapidly increasing, as shown by the statistics for the years 1861—1864, during which period the urban population increased 4·3 per cent. and the rural population only 0·1 per cent., the former almost recovering its rate of increase during the first of the two periods above described, whilst the latter remained all but stationary.

In examining the causes of these phenomena, it must be remembered that the eighteen years which followed upon 1816 were years of profound peace coming immediately after a generation of incessant war, and that there was consequently a gap in the population which it was natural should be filled up by a very much accelerated rate of increase. It is also certain that emigration has been carried on in a much more systematic manner and on a much larger scale since 1834 than it was before. Making due allowance for these two causes, it yet seems a fact worth noting that the diminished rate of increase should coincide with the period during which the agricultural population became invested with full proprietary rights over their holdings, and the land was emancipated from the burdens of every kind which had previously impeded its cultivation.

This fact is especially noticeable when we take the period from 1861—1864 into consideration, during which the rural population remains all but stationary. For by this time the work of emancipation had, with a few unimportant exceptions, been completed, and the new order of things had been definitely established. Now, under this new order of things, it is certain that the general standard of cultivation has been immensely raised, that the land yields infinitely more than it did previously, and that the peasant population is not only much better fed and much better clothed, but much better educated and a far better proficient in the art of tillage than it was a generation ago.

It is difficult under these circumstances to resist the inference that, when it has once reached a certain level of well-being, a peasant proprietary is a good judge of what amount of population the land will bear, and that, as it increases in wealth and comfort, in general intelligence, and in the special knowledge of the capabilities of the soil cultivated by it, it becomes alive to the danger of jeopardising this prosperity by over-population.

Nor is this inference in any way weakened by the fact that the diminished rate of increase is, in large measure, to be attributed to emigration. For, during the period (1861—1864) of which I am treating, there was no pauper emigration. The emigrants were all of them persons having the means to emigrate and to enable them to settle under advantageous circumstances in the New World. They exchanged, of set purpose, a state of things in which they were not so much ill off as on the way to being ill off, for one in which they knew they would be very well off. The fact of spontaneous and systematic emigration under such circumstances is in itself a proof that the knowledge possessed by the community is sufficient to enable it to pro-

vide its own safety-valve, and to regulate it according to the greater or less degree of pressure bearing on the land. The use of this regulator is best understood in the Rhine Province, which, as I have already had occasion to remark, is one of the best cultivated and most prosperous districts in Central Europe.

I should observe that this province forms part of the Old Palatinate, and that the Palatine peasants have for generations been celebrated for their superior husbandry and consequent prosperity, as well as for their natural tendency to emigrate and colonise. Some of the most flourishing communities on the Lower Danube and in Southern Russia are colonies which left this part of Germany at the end of the last century. It is impossible not to bring the good husbandry and the colonising tendency into connection with each other as cause and effect. The Palatinate peasant cultivates his land more with the passion of an artist than in the plodding spirit of a mere bread-winner. He knows exactly what his knowledge and his energies are worth, and will not waste them in merely producing the minimum required for his subsistence. The prospect, therefore, of a larger field for his exertions has an irresistible charm for him, and he goes forth to till the virgin soil of the New World, not with the feelings of an outcast from society, but with the confidence of a man who knows that across the seas the future belongs to him.

The statistics of emigration have only been collected since 1863, and only have reference to the official emigration, *i.e.*, to the emigrants who apply to the Government to be relieved of their Hessian nationality before leaving the country, which, as may be supposed, by no means includes the entire class of emigrants.

These official numbers are as follows :—

1863	1,423
1864	1,923
1865	2,281
1866	2,432
1867	2,391
Total							10,450

Of these, 5,176 were males and 5,274 females.

This equality between the sexes is sufficient evidence that the emigration is one of households and not of isolated individuals.

The following numbers, arrived at by comparing what the population should be, according to the excess of births and immigrants into the Grand Duchy over deaths, with what it actually is, give the real deficit caused by emigration, either across the seas or into other parts of Europe :—

1822—25	2,062	1843—46	12,049
1825—28	1,367	1846—49	23,008
1828—31	2,438	1849—52	24,560
1831—34	8,319	1852—55	34,138
1834—37	3,511	1855—58	11,830
1837—40	2,874	1858—61	14,741
1840—43	4,156					

i.e., an average of 3,719 per annum.

An interesting fact revealed by these numbers is the direct connection between emigration and political events. Immediately after the July revo-

lution, there is a sudden jump from 2,428 to 8,319; also the years immediately preceding and immediately following 1848 are those in which the movement attains its largest proportions. After reaching its maximum in the period between 1853 and 1855, when the figure of 34,000 is attained, there is a sudden diminution to 11,000, a number which has not been greatly passed since.

This emigration is almost exclusively fed by the rural population.

There seems to be little doubt, that the excessive emigration which marked the period between 1853 and 1855 is partly to be attributed to a morbid belief—arising in a great measure from the moral depression and general sense of hopelessness caused by the political reaction of the period, in some cases rising almost to the proportions of a panic—that the land was no longer capable of maintaining the population settled on it, and that nothing short of wholesale depopulation could save the country from ruin. Communes contracted large debts to get rid of their poorer members, and in some cases entire townships, after selling their real and personal estate, transplanted themselves bodily to America.

The universal complaint now being the great rise in wages, and the want of agricultural hands, I have, in every part of the country which I have visited, heard this period bitterly complained of as one of universal madness.

It appears to me, however, that the simultaneous emigration which took place at that time—almost the whole of it, I should observe, to the United States of America—has exercised a beneficial effect of a lasting kind upon the agricultural population of the Grand Duchy. For, owing to this general character, there is probably hardly a locality in Hesse between which and a corresponding locality on the American Continent intimate relations have not grown up. By this means, exact information is obtained of the conditions under which labour can advantageously transport itself across the seas, the emigrant expects neither too much nor too little, the particular class wanted at a particular moment is known, and a steady regulator of the labour market is supplied.

A large proportion of the present normal and regular emigration is furnished by the peasant proprietor class. Better than any one else they know how many mouths a given amount of land can feed, and that a property which sufficed to maintain one household will not maintain three households.

It, therefore, frequently happens that, at the death of the head of the family, instead of dividing the land *in natura*, it is sold by auction, the younger households departing with the proceeds of the sale to America.

That a man of this class—in the best years of his life, with a stout healthy wife, used to out-door and in-door work, to washing and cooking, to digging and reaping, and with £80 or £100 in his pocket, thoroughly acquainted with husbandry, and possessing the habits of forethought and calculation, and the knowledge of adapting means to ends, which can only be acquired in the exercise of proprietary rights—should be a valuable acquisition as a settler in a new country stands to reason.

The value of the article is well-known on both sides of the Atlantic, and the German communities settled in the United States will for many generations to come attract their brethren from the European Continent, and afford a natural outlet for the surplus population of the old country.

Agricultural Education.

Before leaving the subject of peasant occupation, I must allude to a very important feature connected with it, viz., the system in force for diffusing agricultural knowledge amongst the population, and bringing home to the door of the smallest farmer the best methods of improving his land.

The agency by which these objects are obtained is that of the Grand Ducal Agricultural Society, in the main a private association, but standing in a kind of co-partnership with the Government, from which it receives a subvention. More correctly speaking, there are three Societies, one for each province, the central organ for the three being named by the Government, and constituting a separate Department in the Home Office. Each Society is governed autonomously by a President, a Vice-President, a Committee of twelve members, who, in Upper Hesse and Rhine Hesse, are elected by the Society, and two Secretaries elected by the Committee. In the Province of Starkenburg, in which the capital of the Grand Duchy is situated, the President and First Secretary are named by the Grand Duke, and are respectively the Chief and the Secretary of the Central Department in the Home Office.

The object of the Societies is to improve the agriculture of the country, and to do this by collecting and diffusing information, and by advising and assisting the Government.

There are at present 3,500 members belonging to the three Societies, who pay a yearly subscription of 3 florins, but receive in return the Journal of the Society, which is published once a week, under the editorship of the Secretary of the Central Department, and contains not only reports of all the doings of the Society, but agricultural information of every kind.

The Government subvention amounts to 12,000 florins (£1,000) a year, of which 3,900 florins are absorbed by the cost of the Central Department.

The educational apparatus of the Society consists of—(1) an Agricultural School at Darmstadt, open from the 1st November to the 31st March, and intended for the sons of peasant proprietors, who, during the spring, summer, and autumn are working with their hands; (2) of an Agricultural Course delivered during the summer holidays at Darmstadt for the benefit of the National Schoolmasters; (3) of premiums to so-called "Fortbildungs Schulen," viz., schools taught by the National Schoolmasters, and attended by boys after the age of 14, up to which time the attendance at the National School is obligatory. In these schools, the schoolmasters who have attended the agricultural course yearly given at Darmstadt, impart elementary knowledge in physics, chemistry, and botany to their pupils. Inspectors named by the Society examine the scholars, and award premiums according to proficiency. I should add that the Society, correctly judging that a sound general education is the necessary basis of agricultural as of every other kind of knowledge, do not restrict their awards to mere proficiency in the special branch of knowledge above referred to, but lay an especial stress on proficiency in the knowledge of language and arithmetic. (4.) Of so-called "Wander Lehrer," or Wandering Teachers, whose business it is to impart instruction and information to the cultivators on the spot. Each province has its own wandering teacher, a professor of high scientific attainments, who devotes, on an average, a month to each circle, remaining several days at the same halting station, so that each locality is visited by him once a year. By means of periodical visitation, he becomes accurately acquainted with local requirements and local deficiencies, and is thereby enabled to adapt his teaching to the special

wants of his audience. Moreover, by repeating his visits each year, he is able to note whether the locality is progressing or the reverse, and to sum up general results in a way which enables the smallest proprietor to compare the facts recorded by his homestead with the general results of science and agricultural progress. I am not aware that this system of ambulant teachers has been attempted elsewhere. It appears singularly well fitted to meet the requirements of a peasant population, and I am assured that the results have hitherto been highly satisfactory. The system, I should add, has only been a few years in force.

Once or twice each year there is a general meeting of the members of the Agricultural Society resident in each circle. It is usually attended by the Secretary of the Central Department, and by one or more of the teaching staff from the capital. At these meetings the general agricultural state of the circle forms the subject of discussion. The Kreisrath (answering *mutatis mutandis* to the Préfet of a French Department) presides. I attended one of these meetings, the details of which it would require more space than I can afford to relate. I can only say that it seemed to me in the highest degree to realise the object of the Society, viz., to impart scientific information in a form accessible to the comprehension of practical men, and available for immediate use. The persons present, about 150 in number, were for the most part either peasants of the small proprietor class or schoolmasters.

TENANTS AND SUB-TENANTS UNDER LANDLORDS.

Tenure.

The following statements have exclusive reference to the case of tenants of large consolidated farms. As I have before had occasion to state, tenants of parcels land fall into the category of peasant cultivators, who hold a parcel here and there, intermixed with the peasant properties, in the arable "mark" of the various communes, and for the purposes of this inquiry I have classed these tenants with peasant proprietors.

They hold from 200 to 1,200 morgen.

The usual tenancy is for eighteen years. With scarcely any exception, sub-tenancies are strictly guarded against by express stipulation in the contract.

Tenancy is invariably by written agreement.

Contracts creating tenancies are certified by the Local Courts.

Under a system of written agreements, in which the conditions of the tenure are invariably laid down in minute detail, customs cannot arise. In the mediæval tenures mentioned in the early portion of this paper, custom was everything, and, as the natural result, confusion was everywhere. One of the main objects of the drastic legislation, which once for all did away with mediæval tenures, was to uproot custom, to reduce all forms of ownership to the simple and absolute form of "allodial" ownership, and to submit not only landed property, but the use of landed property, to the same strict laws of contract to which all other kinds of property are subject.

Rent

1. Is paid in money,

2. And by competition. The farm is put up to auction, the landlord retaining the right to choose amongst the three highest bidders the tenant he considers most likely to suit him.

Improvements.

Permanent improvements, and especially buildings, invariably form the subject of distinct agreement between the contracting parties. As a rule, they are executed jointly by the landlord and tenant, the landlord furnishing the plans, the higher kind of labour, and the materials, and the tenant the carting and the rougher kind of labour. Where no agreement has been come to, and the tenant nevertheless indulges in improvements, the landlord has an absolute right to such improvements on resuming possession.

APPENDIX.

The question of food in connection with labour is one of such elementary importance that my endeavours have been particularly directed towards obtaining reliable data of an exact kind in respect to it. I have felt that it was the more necessary to do so, because, in the able and exhaustive account of continental agriculture given by Mr. James Howard at a meeting of the Farmer's Club, that gentleman commits himself to the statement that the condition of the English agricultural labourer is superior to that of any of the same class upon the Continent. He adduces, in support of this assertion, the statement of one of his own employés, who was brought up as an agricultural labourer, who has travelled over a great part of Europe, and who expresses his pity "for people who live on black bread, broth, cabbage, red-herring, and such like." Now, Mr. Howard's theory may or may not be correct, I cannot pretend to have even an opinion on the subject; but I have no hesitation in asserting that, as yet, the data upon which a really sound induction could be arrived at, have not been furnished. An observation like that quoted by Mr. Howard is valueless from a scientific point of view. The unreasonableness of the English labourer's prejudice in favour of white bread is well known. The whiteness is a proof of a deficiency of nutritive quality, and the dark colour, if resulting from the admixture of bran, is a proof of the presence of those qualities. Again, as regards broth, everything will depend upon what the broth is composed of. Hence, until accurate dietaries both as regards volume and chemical contents have been compiled abroad and in England, no safe results can be expected.

I have endeavoured, as far as Hesse is concerned, to supply an accurate working man's dietary of this kind, but the great difficulties I have experienced in doing so have convinced me how far we are as yet from possessing those elementary statistics from which alone safe inductions on these elementary subjects can be made.

The process I employed to obtain the following dietary was the following:—Mr. Ehatt, of Viernheim, who farms about 200 morgen, and employs 9 workpeople (7 men and 2 women), lodged and boarded on the farm, very kindly undertook to keep for many consecutive days an exact register of everything consumed by those labourers; the ingredients of each soup were separately weighed before the soup was made, so also with the potatoes and other vegetables in their cooked state; the milk and brandy were measured, &c. From these materials I put together the quantity of bread, potatoes, &c., consumed by the nine persons during the six working days of the week (the Sunday dinner is somewhat different, and would have complicated the calculation), and submitted the results

thus obtained to an analytical chemist, who furnished me with the equivalents of these materials as elements of nutrition.

Food consumed per head during 6 days:—

A.—Solid Food.

13 lbs. bread (half rye half barley-meal).	4 lbs. sauerkraut.
12 lbs. potatoes.	3 lbs. cheese.
	1½ lbs. salt pork.

B.—Ingredients of Soup.

16 loth pearl barley.	2 loth beans.
22 loth spelt grits.	1 lb. roasted meal.*

C.—Liquids.

9 schoppen (= 9 lbs.) milk.	3 schoppen (= 3 lbs.) corn brandy,
1 lb. 10 loth cream (for soup).	40 per cent. alcohol.†

This food analyzed into plastic food and respiratory food, or muscle-making and fat-making food, gives the following results per man per day:—‡

Description of Food.	Weight of Food, in Grammes.	Nitrogenous or Plastic Food, in Grammes.	Non-nitrogenous or Respiratory Food in Grammes.
	Grammes.	Grammes.	Grammes.
Bread	1,083·330	75·83	564·16
Potatoes	1,000	20	230
Sauerkraut	333·330	23·33	360
Cheese	150	46·50	37·083
Meat	125	8·75	61·25
Milk	750	37·50	60
Cream	109·370	...	27·34
Grains	97·330	14·85	68·31
Beans	5·208	1·72	3·125
Meal	83·330	5·833	49·166
	3,736·898	234·313	1,460·384

In addition to the above each man consumes 250 grammes of corn brandy a day, containing 100 grammes of alcohol.

Notwithstanding that I have taken the greatest pains to be correct, I

* 1 lb. English = 0·9072 Hessian lb. 1 oz. English = 1·8144 Hessian loth.

† 1 gallon English = 2·214 Hessian maas = 8·856 schoppen.

‡ The German terms used are "Kraftbildner" and "Fettbildner." I have no book on physiology to refer to, and do not know the exact English equivalents. The former are nitrogenous, the latter non nitrogenous. I should observe that in this division the salts are left out of consideration.

can only give the above data as approximately correct. The great variety in which the food is dressed, more of one kind being used one day, less another, and so on, forced me in regard to some of the materials, such as cheese and vegetables, to draw an average, and no allowance has been made for the larger quantities consumed by men as compared with women. I believe, however, that the approximation to the truth is a very close one, and that the above Table may be taken as fairly representing the quantity and quality of food consumed by the agricultural wages' class in the flourishing portions of the Grand Duchy of Hesse.

VIII.

THE LAND SYSTEM OF BELGIUM AND
HOLLAND.

BY EMILE DE LAVELEYE.

CONTENTS.

- § 1. The question stated.
- § 2. On the natural disadvantages under which Flanders labours, and the remedies devised by its inhabitants.
- § 3. Improved husbandry of very ancient date in Flanders.
- § 4. The cultivators themselves the best market for the produce of agriculture.
- § 5. The *morcellement* of land in Belgium.
- § 6. Peasant property raises loans on better terms than large property in Belgium.
- § 7. *La petite culture* in Flanders creates its own capital.
- § 8. Peasant property does not exclude the employment of machinery, even of the most costly description.
- § 9. Peasant property only capable of putting the worst soils into cultivation.
- § 10. Peasant property favours the increase of all the elements of agricultural wealth.
- § 11. Distinctive features of Flemish husbandry.
- § 12. On the labour employed in farming in Belgium.
- § 13. The subdivision of land in Flanders not attended with any excessive increase of population.
- § 14. A true proposition and false conclusion by Arthur Young.
- § 15. Spade *v.* Plough.
- § 16. Leases in Belgium.
- § 17. The *Beklem-regt* of Groningen and the *Aforamento* of Portugal.
- § 18. The Flemish tenant right (*Pachters-regt*).
- § 19. The condition of the cultivators of the soil in Belgium.
- § 20. The obstacle to the well-being of the peasantry of Belgium is not the number of small proprietors, but the number of small tenants.
- § 21. The farmers of Holland better off than those of Belgium.
- § 22. *Latifundia perdidit Italiam*.
- § 23. Free-trade in land.

- § 24. If the subdivision of property is favourable to the production of wealth, it is much more so to the maintenance of social order.
- § 25. The inevitable progress of ideas of equality must put property in peril in countries in which it is held by a small number of families.
- Appendix on the *Aforamento* in Portugal.

§ 1. I do not propose to give here an account of the state of agriculture in Belgium and Holland, having done so elsewhere ;* what I seek is to point out facts relative to both countries, calculated to throw some light upon the following question : What is the agrarian constitution (*i.e.*, the system of ownership and tenure of land) most conducive to the progress of agriculture and to the welfare of mankind ?

A preliminary observation is requisite. Thirty years ago economists were in the habit of considering only the production of wealth, paying hardly any attention to its distribution, which they thought to be regulated by inexorable natural laws ; the system which yielded the largest produce being, of course, thought the best. But modern improvements in machinery having doubled, nay, trebled, the production without adding to the welfare of all those who seemed to be entitled to it by their industry, endeavours are now made to devise means of better distributing the produce ; and there are those who think that of two systems of agrarian organisation, the one which leads to the more equitable distribution of the produce is the one to be preferred.

For example, let us suppose a certain area of land to yield a produce of 1,000, distributed thus :—

1 landlord	200 parts.
1 tenant	100 „
14 labourers, at the rate of 50 .	700 „
	<hr/>
	1,000 parts.

Suppose, on the other hand, the same area of land, worked by 16 small owners, to yield but 960, and so give 60 to each of them. I should, for my part, consider this second organisation superior to the first.

Neither extreme poverty nor extreme opulence is the thing to be desired. Pauperism and divitism alike are the parents of vice in private and revolution in public life.

* See my books, "*L'Economie Rurale de la Belgique*," "*L'Economie Rurale de la Néerlande*," and "*L'Agriculture Belge, 1878 ; Rapport présenté au Congrès Agricole Internationale de Paris*,"

§ 2. In England, a contrast is often drawn between Flanders and Ireland, and the former is said to enjoy agricultural advantages not possessed by Ireland, such as great markets, a better climate, abundance of manure, more manufactures. This is a point on which some light should be thrown.

Flanders does enjoy certain advantages, but they are equally accessible to the Irish, derived, as they are, from human industry; whereas the advantages possessed by Ireland, coming, as they do, from nature, are not within the reach of the Flemish.

Let us look, first, at climate and soil. The climate of Ireland is damper and less warm in summer, but less cold in winter. In Flanders, it rains 175 days in a year; in Ireland, 220 days. On this account, the Irish climate is more favourable to the growth of grass, forage, and roots, but less so to the ripening of cereals; yet the Fleming would be but too happy had he such a climate, cereals being but of secondary importance with him, and often used as food for his cattle. He seeks only abundance of food for his cows, knowing that the value of live stock goes on increasing, while that of cereals remains stationary. Butter, flax, colza, and chicory are the staple articles of his wealth, and the climate of Ireland is at least as well suited to the production of these as that of Flanders.

As for the soil of Ireland, it produces excellent pasture *spontaneously*, whilst that of Flanders hardly permits of the natural growth of heather and furze. It is the worst soil in all Europe; sterile sand, like that of La Campine and of Brandenburg. A few miles from Antwerp, land sells for 20 francs (16s.) an acre, and those who buy it for the purpose of cultivation get ruined. Having been fertilised by ten centuries of laborious husbandry, the soil of Flanders does not yield a single crop without being manured once or twice, a fact unique in Europe.

If in a Flemish farm of twenty-five acres there were but five or six acres of Irish soil, forming good natural pasture, it would be worth one-third more. Not a blade of grass grows in Flanders without manure. Irish soil might be bought to fertilise the soil of the Fleming. The ideal, the dream of the Flemish farmer—is a few acres of good grass. In Ireland, Nature supplies grass in abundance.

But it may be said that Flanders is well supplied with manure. Doubtless it is; but it is got only by returning to the

earth all that has been taken from it. The Flemish farmer scrupulously collects every atom of sewage from the towns; he guards his manure like a treasure, putting a roof over it to prevent the rain and sunshine from spoiling it. He gathers mud from rivers and canals, the excretion of animals along the high roads, and their bones for conversion into phosphate. With cows' urine gathered in tanks he waters turnips which would not come up without it; and he spends incredible sums in the purchase of guano and artificial manures.

True, it may be said, he must have money for that, and the Irishman has none. But where does the Fleming's money come from? From his flax, colza, hops, and chicory; crops which he sells at the rate of from 600 to 1,500 francs (£24 to £60) per hectare; and why cannot the Irishman go and do likewise? The Irishman, it may be answered, must grow food for himself. But so does the Fleming; for, in fact, apart from the special crops referred to, he grows enough to support a population relatively twice as large as that of Ireland. It has indeed been argued that the special crops, for which Flanders is famous, would be out of the question save for access to markets which are not within the reach of the Irishman.* But this argument seems to me to have small validity. The chief market for the agricultural produce of Belgium is England. And is London nearer to Ostend and Antwerp than Dublin and Cork are to Liverpool and Manchester? Friesland and Holland send cattle and butter to England, and Galicia ships oxen by way of Vigo, across that dangerous Bay of Biscay; why cannot Ireland do the same?

Flanders exports prepared chicory to Germany, to Holland, to all parts of the world, and chicory roots as far as Warsaw; hops to Paris, London, and Scotland; flax to France, England, and even to Ireland itself; tobacco to America; colza and poppy-seed oils to the very south of France; while, on the other hand, it imports corn from Hungary by land, and from Iowa or Wisconsin by lake, canal, railway, and ocean shipping. It is plain, therefore, that produce worth three or four times as much might well be exported from Ireland to England. But there are manufacturers in Flanders, it is said, and none in Ireland, or only in Ulster. Now, on this point it is important to draw a distinction. Flanders possesses undoubtedly a number of small local industries, but they are the consequences, not the cause,

* See Lord Dufferin on "Irish Tenure," p. 167.

of her good husbandry ; and any country possessing the latter would be in possession of the former. The great industries of Belgium are situated in the Walloon country, not in Flanders. Complete proof of this is afforded by the following table :—

1866.				Stationary Engines.		Horse-power.	
West Flanders	307	} 1,113 {	3,114	} 16,094
East Flanders...	806		12,984	
Hainaut	2,546	} 4,154 {	73,157	} 113,086
Liège	1,608		39,929	

Thus the two industrial provinces of the Walloon country have seven times as much steam-power as Flanders. Then, again, Flanders has but one great centre of manufacture, Ghent, with 120,000 inhabitants ; whilst Belfast has a population of over 150,000, and is increasing much more rapidly than the capital of Flanders.

On the whole, for carrying farming to a high pitch of perfection, Ireland enjoys far greater advantages than Flanders, the land being much superior, the climate equally favourable to the growth of valuable crops, and the same markets being at hand. Unfortunately, the Irish farmer has not the same agricultural traditions as the Fleming. And, of course, these wholesome traditions, being the work of centuries, cannot be acquired in a day. In every country the progress of husbandry is slow at first, on the one hand, because the peasant has received little education ; and on the other, because the processes resorted to elsewhere cannot be simply copied in agriculture as they are in manufactures ; they must be modified in accordance with the nature of the soil and the climate, and that is an *art*. The knowledge and practice of that art in Flanders is of very ancient date, and it may not be thought out of place to say something of its early history.

§ 3. The most ancient historical records tend to show that the cultivation of the soil was always in a high state of perfection in Flanders. As far back as the time of the Romans, inscriptions on tumuli prove that the inhabitants of the borders of the Scheldt used to resort to England for marl to improve their infertile soil. From one of Eginhard's letters, it appears

that in the ninth century flax and vines were grown at the same time that cloth was manufactured in the environs of Ghent. Numerous documents in the Middle Ages, such as registers of monasteries, donations, and leases, reveal the existence of processes of farming almost as elaborate as those in use at the present day; manure in abundance, fields carefully enclosed with magnificent hedgerows, alternate crops, forage and roots for cattle.* Rural manufactures arose from the progress of husbandry; linen and woollen fabrics were woven, which ere long became famous. The weavers first lived in the open country, and subsequently flocked into towns; and exportation led to the development of urban manufactures and the growth of a great urban population. It was wealth originating in the good cultivation of the country which created cities, such as Ghent, Bruges, Ypres, Louvain, Brussels, and Antwerp. In turn, the wealth of the cities fostered the progress of agriculture and rural civilisation.

One fact alone is sufficient to show the degree of advancement the Flemish villages of the Middle Ages had reached. As far back as the year 1400, dramatic performances took place in the villages, the pieces being written, got up, and performed exclusively by persons belonging to the country.† Most of the villages had their *Sociétés de Rhétorique*, forming so many focuses of intellectual life. In the sixteenth century, these societies adopted most of the ideas of the Reformation, and on this account were suppressed by the Spaniards. Industry was killed by war and persecution; and agriculture and civilisation were arrested and even thrown back. Happily the traditions of the past were too deep to be extirpated, and to them Flanders is indebted for her present wealth.

The question arises, can arts of such ancient birth in Flanders be diffused throughout another country, without the same early traditions and training? It is a problem fraught with difficulties. Something, doubtless, might be done in the way of agricultural instruction, were all persons in an influential position, such as magistrates, landowners, clergymen, to exert themselves for its diffusion, and themselves to supply practical examples of it. But examples of more weight with small

* *Vide* the Author's "Economie Rurale de la Belgique," chap. i. and Appendix No. 1.

† *Vide* Mr. Vanderstraeten's Essay in the "Annales de la Société historique d'Ypres," vol. iv.

farmers would be the spectacle of some of the latter class enriching themselves by an improved system of husbandry. Were two or three intelligent farmers in each district in Ireland, having become landowners or hereditary tenants, to borrow from Flemish agriculture such processes as are applicable to the soil and climate of Ireland, a complete transformation of Irish farming might ensue. In the Belgian province of Hainaut, the example of a single farmer adopting the Flemish rotation was sufficient to bring about the suppression of the fallow throughout the whole region.* Could nothing be done to produce agricultural progress in the same way in Ireland?†

§ 4. One most important fact in considering land systems, is that the country itself and not the town is naturally the chief market for agricultural produce. It is a great error to suppose that agriculture, in order to thrive, must have a market in great cities for its productions. The cultivators, on the contrary, may constitute a market for themselves. Let them produce plenty of corn, animals of various kinds, milk, butter, cheese, and vegetables, and interchange their produce, and they will be well fed, to begin. But furthermore, they will have the means of supporting a number of artificers; they may thus be well housed, furnished, and clothed, without any external market. For this, however, they must be proprietors of the soil they cultivate, and have all its fruits for themselves. If they are but tenants who have a rent to pay and no permanent interest in the soil, they certainly require a market to make money. In a country whose cultivators are all tenants, an external market for their produce is indispensable; it is not so in a country of freeholders; all the latter requires is that agriculture should be carried on with the energy and intelligence which the diffusion of property is sure to arouse in a people.

The province of Groningen was the best cultivated of Holland before ever it exported any of its products to England, and yet there are no large towns in it; but, thanks to its peculiar system of hereditary leases, the farmers could keep almost the entire produce of their labour to themselves.

Suppose that by the stroke of a magic wand, the whole of

* "Economie Rurale de la Belgique," p. 148.

† I have hardly ever met with an answer to the important question: Does the Irish small *proprietor* exhaust his land as much as the small tenant?

the tenant farmers of Flanders were to become possessed of the fee-simple of their lands, what would be the result? They would then themselves consume the milk, butter, and meat which they are now obliged to sell, and in consequence have to dispense with animal food and to resort almost exclusively to vegetables for their support; then they would no longer have to send what they do to an English market. Would they be the worse off for that?

Look at Switzerland. In proportion to her population, she has more horned cattle than Flanders; *i.e.*, 35 head to every 100 inhabitants, against 24 in Flanders. Yet while the latter exports butter, oxen, rabbits, &c., to France and England, Switzerland actually *imports* butter, cattle, corn, &c. The consequence is that Switzerland consumes twice as much animal food as Flanders; viz., 22 kilos. of meat, 12 kilos. of cheese, 5 of butter, and 182 of milk per head per annum. Of the Swiss, indeed, we may say what Cæsar said of the ancient Britons: *Lacte et carne vivunt*.

How is it that the Swiss peasant is much more substantially fed than the Flemish? Because the former is nearly always an owner of the soil, while the latter is but too often only an occupier. The Swiss has not for his market the insatiable stomach of the London market, which the poor Fleming contributes to feed; he has a better one than that, namely, his own.

Thus, Switzerland and Groningen prove that agriculture does not stand in need of a large foreign market to make progress. A peasant proprietary is the best of all markets.*

§ 5. On the 31st of December, 1878, there were in West Flanders, on an area of 323,466 hectares, 96,204 proprietors, and 719,958 "parcels" of land; in East Flanders, 163,115 † proprietors and 875,333 parcels, towns and villages included; in the entire kingdom of Belgium there were 1,143,733 owners and 6,478,340 parcels. In 1846, the enumeration showed 758,512 proprietors and 5,500,000 parcels of land. Thus it

* Is another proof needed? No vines are better cared for than those of the Canton of Vaud, being the agricultural wonder of the Lake of Geneva. Is the wine grown there exported like champagne, claret, or port? Not at all; the Vaudois drink it themselves. That is still better.

† The number of proprietors is not exactly known. The numbers indicating the proprietors refer to the amounts of the land tax, and many proprietors pay various amounts.

appears that the number of landowners and of parcels has considerably increased.

In Belgium I have never heard a complaint against the too great subdivision of land, nor any expression of alarm for the future, such as one used to hear in France before economists of eminence, such as de Lavergne, Wolowski, and Passy, had undertaken the labour of demonstrating the chimerical nature of the fears that the soil would be crumpled to bits.

As regards Belgium, and more especially Flanders, foreigners should not be misled by the great number of *parcels*. The parcels enumerated are *cadastral* parcels for the purposes of the survey; and very often the surface of the soil shows not the least trace of any such divisions. Not only do many parcels often belong to one and the same proprietor, but a single estate or farm of ten or twelve hectares generally consists of many of them. The land is divided into farms of different sizes in proportion to the capitals of the cultivators; for example, fifty hectares to four horses, twenty-five to two, twelve for one horse, five or six hectares to a family without beasts of burden, and a little plot or a labourer. When large farms are subdivided it is done on economical grounds—viz., because they fetch higher prices when sold in lots—they are hardly ever divided in consequence of the law of succession. The peasant attaches too much value to the proper outline of a field to break it into pieces; he would rather sell it altogether.

Hitherto, the consequence of the progressive subdivision of land in Flanders has only been to raise at once the rental, the gross produce, and the value of the soil; at the same time that the number of landowners has increased, the condition of the cultivators has improved.

In Flanders you do not find the land subdivided in the way it is in Ireland, according to Lord Dufferin, who has shown the evils of the kind of subdivision practised there;* from his description it appears that in Ireland, at the death of any holder, and often during his lifetime, the children divide the land among themselves, each of them building a cottage on it; or, if the tenant has no children, he sublets his land to several small farmers, and allows them to settle on it, notwithstanding the stipulations of the lease. Such breaking-up of the land must lead to the most wretched kind of farming, and to pauperism on the part of the tenants. As long as the

* *Vide* Lord Dufferin on "Irish Tenure," chap. iii.

Irish farmer has no better understanding than that of his own interest and of the requirements of a sound economical system, no agricultural policy, neither fixity of tenure nor even ownership of fee-simple could improve his condition. Although the population of Flanders is twice as dense as that of Ireland, a Flemish peasant would never think of dividing the farm he cultivates among his children; and the idea of allowing a stranger to settle and build a house on it, and farm a portion of it, would appear altogether monstrous to him. On the contrary, he will submit to extraordinary sacrifices to give his farm the size and typical shape it should have.

How is it that the Fleming and the Irishman hold such different points of view? I think it is partly due to the difference of race, and partly to circumstances. The Celt being more sociable, thinks most of the requirements of members of his family, whilst the Teuton thinks more of the requirements of the soil and of good cultivation. Nowhere to my knowledge does the Celt show himself a cultivator of the first order; it is to the German, the Fleming, the Englishman, that agriculture is indebted for its greatest improvements. The Celt has in several countries subdivided the soil for the sake of his family, without regard to the requirements of national husbandry. Throughout Germany,* law and custom alike have always been opposed to the division of farms. In Upper Bavaria this is carried so far that almost all the land is in the hands of wealthy peasants, keeping up a kind of entail by always bequeathing the whole of their property to one of their children, a small pittance being given to the others. But supposing the Irishman to become the absolute owner of his farm, would he learn and comply with the requirements of the land? A Flemish farmer's son always wants to have a good farm of his own; he would not put up with a hovel improvised on a potato field. Could the Irishman but be brought to practise agriculture as an art, and not as a mere means of extracting a subsistence from the soil, he would soon abandon the miserable system of subdivision which he has adhered to so long. But how is this taste for agriculture as an art to be imparted to him? To extinguish the influence of tendencies, whether inherent in the race or the historical product of centuries of ignorance, would it suffice to introduce an agrarian constitution in Ireland similar to that of Flanders, or better still, that of

* *Vide* W. Roscher, "Nationalökonomik des Ackerbaues," p. 229.

Switzerland? These are questions which I confess myself not in a position to answer; but they are questions which those who have the Irish land question to solve ought to face, when considering the land system of Flanders.

I think it useful to subjoin a tabulated statement, giving an idea of the number of farms (*exploitations*) and their relative sizes. These results date as far back as 1846, no accurate returns having been published since:—

PROVINCES.	PROPORTIONATE NUMBER OF FARMS OF FROM								
	50 Ares and less. i.e., half an hectare.	51 Ares to 1 hectare.	1 to 5 Hectares.	5 to 10 Hectares.	10 to 15 Hectares.	15 to 20 Hectares.	20 to 25 Hectares.	25 to 50 Hectares.	50 to 100 Hectares and upwards

§ 6. It has often been asserted that the peasant properties of Flanders are burdened with debts, and that loans on them are raised at ruinous rates of interest.

The following table shows that the truth lies in the opposite direction. In the remarkable return of the Census of 1846, the Government published an instructive table, showing which are the provinces of Belgium where loans are raised at highest rates of interest (page 240).

Thus while in East Flanders no more than five per cent. of the loans are raised on usurious interest, in the province of Luxembourg as much as eighty-two per cent. of the loans bear interest at five per cent. and upwards.

Were a statement drawn up of the debts with which land

property is burdened in the various parts of Europe, it would be seen that large estates are generally more encumbered than small ones.

PROVINCES.	Proportion of Capital bearing interest at the rate of 5 per cent. and upwards to the aggregate Loans.	
Antwerp } Flanders, West ... } Flanders, East ... }	Small farms	{ 15 per cent. 23 „ 5 „
Brabant } Limbourg }		{ 33 per cent. 40 „
Hainaut } Liège } Namur } Luxembourg }	Large farms	{ 71 per cent. 36 „ 76 „ 82 „

In England the mortgages are reported to amount to fifty-eight per cent. of the value of the land ; in France only ten per cent., according to Messrs. Passy and Wolowsky. In Prussia the eastern provinces with their large estates show greater indebtedness than those of the west with their small farms.* In Lombardy, the total landed debt amounts to twenty-five per cent. of the value of the land, and in the province of Sondrio, where the farms are small, they represent no more than one-and-a-half per cent. of that value.

§ 7. Every one knows La Fontaine's story of Perette going to the market to buy eggs ; the eggs are hatched into chickens ; the chickens produce a pig and then a calf, and the calf becomes a cow. This dream of Perette's is daily realised by the Flemish small farmer.

We are often told that agriculture stands in need of capital ; that institutions in aid of agricultural credit are wanting : I reply, good husbandry itself creates the capital needed.

In agriculture, the capital most needed is live stock, to furnish the manure by which rich harvests are secured.

The Flemish small farmer picks up grass and manure along the roads. He raises rabbits, and with the money they fetch he buys first a goat, then a pig, next a calf, by which he gets a

* *Vide* the excellent work by President Adolphe Lette ; " Die Vertheilung Grundeigenthums."

cow producing calves in her turn. But of course he must find food for them, and this he does by staking all on fodder and roots; and in this way the farmer grows rich, and so does the land. The institution in Flanders in aid of agricultural credit is the manure-merchant, who has founded it in the best of forms; for money lent may be spent in a public-house, but a loan of manure must be laid out on the land.

The poor labourer goes with his wheelbarrow to the dealer in the village to buy a sack or two of guano, undertaking to pay for it after the harvest. The dealer trusts him, and gives him credit, having a lien on the crop produced by the aid of his manure. In November he gets his money: the produce has been doubled, and the land improved. The small farmer does as the labourer does; each opens an account with the manure-dealer, who is the best of all bankers.

The large farmers of Hainaut and Namur do not buy manure, fancying they would ruin themselves by doing so. The Flemish small farmers invest from fifteen to twenty millions of francs in guano every year, and quite as much in other kinds of manure. Where does large farming make such advances?

§ 8. The chief objection made to *la petite culture* is, however, that it does not admit of the use of machinery, being reduced, as it is alleged, to the employment of the most primitive implements of husbandry, and never raising itself above the first stage of cultivation in that respect. This has been put forward as an incontestable axiom, baffling refutation, and I believe is so regarded in England.

To disprove this, I need point out that to Flanders are due the best forms of the spade, the harrow, the cart, and the plough—Brabant ploughs having for a long time been imported from Flanders into England. It may be said that these are primitive and not very costly implements. I need only reply, Look at what is going on in Flanders at the present day.

The most costly agricultural machine in general use in England is the locomotive steam threshing-machine. Well, this machine is to be found everywhere in Flanders. Some farmers will club together to purchase one, and use it in turn; or else a villager, often the miller, buys one, and goes round threshing for the small farmers, on their own ground, at so much per day, and per hundred kilos. of corn. The same thing

takes place with the steam-plough as soon as the use of it becomes *remunerative*.

To keep hops in good condition, very expensive machines are required to press it. At Poperinghe, in the centre of the hop country, the *commune* has purchased the machines, and the farmers pay a fixed rate for having their hops pressed—which is at once an advantage to them and a source of revenue to the town.

The example of Flanders proves, therefore, that the division of land forms no obstacle to mechanical economy in farming. Moreover, the subdivision of the soil is perfectly compatible with the methods of *la grande culture* itself; the operations of husbandry may all be on a great scale, while the land is held in shares by a number of persons, like shares in a railway. I see no practical impossibility in such a solution of the problem how to combine the land system of Flanders with all the improvements of the age.

§ 9. It is often asserted that poor lands can be brought into cultivation only by large and wealthy owners. This is exactly the reverse of the truth—at least as regards the most intractable soils.

In Belgium there are lands so sterile by nature that one-half of all the capital sunk in them is either lost or yields hardly any returns—so that it is not in the interest of any capitalist to work them. In La Campine, all those who have attempted to set up large farms, were they ever so well managed, have ruined themselves, or, at any rate, lost money by it.

It is the small cultivator only who, spade in hand, can fertilise the waste, and perform prodigies which nothing but his love of the land could enable him to accomplish. His day's work he counts for nothing; he spares no exertion, and shuns no trouble; and by doing double the work, he produces double the result he would do if he worked for hire. Thus he has made fertile farms of the dunes and quicksands which border our dangerous coast. Penetrating into the interior of these dunes in the neighbourhood of Nieuport, you observe little cottages with a few acres of rye and potatoes around them. Their owners succeed in keeping a few cows, which the children take out to graze wherever a blade of salt grass can be found. With the manure of their cattle they mix seaweed and whatever animal matter the sea throws up, and thus they raise crops of first-rate potatoes and vegetables. La Veluwe—the Campine

of Holland—has been reclaimed in like manner inch by inch by the peasantry. I have elsewhere given an account of the rise of one of these sand villages within recent years.*

In Savoy, in Switzerland, in Lombardy, in all mountainous countries, land has been reclaimed by *la petite culture*, which large landowners could not have broached without loss. In those highlands man makes the very soil. He builds terraces along steep inclines, lining them with blocks of stone, and then carrying earth to them on his back, in which he plants a mulberry or walnut-tree, or a vine, or raises a little corn or maize.† Whoever, after paying for the labour, should take a lease of the ground thus created would not get one half per cent. from his outlay, and therefore a capitalist will never do it. But the small cultivator *does* it ; and thus the mountain and the rock become transformed. So, too, under *la petite culture*, even when aided not by proprietorship, but only the kind of tenure to which the name of *emphyteusis* has been given, and which corresponds to a long lease, the most ungrateful land has been reclaimed in Flanders. The tenant, being secure of the future, builds a house, clears the ground, manures and fertilises the rebellious soil ; and though he will not reap the same benefit from it that a peasant proprietor would, he reaps much more than either a large farmer or a large proprietor would.

§ 10. Notwithstanding all the arguments of the most distinguished economists in England, such as J. S. Mill, Thornton, and Cliffe Leslie, to the contrary, peasant property in land seems still to be regarded there as synonymous with wretched cultivation, and large estates with rich and improving farming. The reason is obvious ; the English are accustomed to compare the farming of their own country with that of Ireland. In fact, however, both England and Ireland are exceptions, one on the right, the other on the wrong side. In England there exists a class of well-to-do and intelligent tenant-farmers, such as are not to be found anywhere else. In Ireland, on the contrary, there is no peasant property, but only large estates in combination with small tenure, often with a middleman between the landlord and the cultivator—of all agrarian systems the most wretched. Added to this, many centuries of oppression and misgovernment made the Irish people more improvident than the inhabitants of any other country in the civilised world ; thus,

* *Vide* "Economie Rurale de la Néerlande," p. 212.

† *Vide* my "Economie Rurale de la Suisse et de la Lombardie," p. 71.

what with a land system of the worst kind, and the general condition of the country, the case of Ireland is surely an exceptional one. All over the continent of Europe there is more live stock kept, more capital owned, more produce and income yielded by small farms than large estates.

Look at Flanders, for an example. The soil is detestable, as we have seen ; and it is unhappily a country where a multitude of small farms are held by tenants, as in Ireland ; but happily the peasant proprietor exists by the side of the small tenant.

The working capital of a farm, which in England is estimated at from £12 to £15, amounts here to 500 francs (£20). The gross produce may be taken at 600 francs (£24) per hectare. As regards live stock, there were to be found in 1846, 55 heads of horned cattle, 12 horses, and 8 sheep on every 100 hectares superficial area.

For England (not including Ireland and Scotland) M. de Lavergne gives the following averages for the same year :— 33 heads of horned cattle, 6 horses, and 200 sheep per 100 hectares.

Bringing these figures down to the common standard of heads of great cattle,* we find 64 heads in England and 68 in Flanders ; the land of Flanders being at the same time worse than any in England. The average rent of land in Flanders is 100 francs (£4) per hectare, and the value or selling price varies from 3,500 to 4,000 francs (£140 to £160). Rents and selling prices have doubled since 1830. The results are not equalled in any other part of Europe.

§ 11. The fact that the Flemish husbandman derives such abundant produce from a soil naturally so poor, is due to the following reasons, viz. :—

1. The perfection of both plough and spade work.
2. Each field has the perfection of shape given to it, to facilitate cultivation and drainage.
3. Most careful husbanding of manure. None is wasted either in town or country, and all farmers, down to the poorest tenants and labourers, purchase manure from the dealers.
4. The great variety of crops, especially of industrial plants, e.g., colza, flax, tobacco, hops, chicory, &c., yielding large returns and admitting of exportation to the most distant countries.

* In reducing sheep to great cattle, we have adopted the proportion of 8 : 1, instead of the usual one of 10 : 1, the English sheep being exceptionally superior as regards flesh and wool. Horned cattle are also heavier.

5. Second, or "stolen," crops, such as turnips and carrots, after the cereals, or English clover, spurry, &c., in the spring, whereby the cultivated area is in effect increased one-third.

6. Abundance of food for cattle. Although the soil is not favourable to permanent meadows, yet, taking the second crops into account, one-half of the available superficies is devoted to the keeping of live stock. Hence the rise of rents, although the price of corn has hardly increased.

7. House feeding of the cattle, by which the cows give both more milk and more manure.

8. Minute weeding.*

Many of these agricultural practices are possibly only where there is a large agricultural population; for which, on the other hand, work is found at the same time by these very practices.

§ 12. The following table shows the amount of labour employed in the cultivation of the soil in Belgium:—

PROVINCES.			Area in hectares for every 100 inhabitants,	Number of field hands per 100 inhabitants.	Number of women to every 100 men.	Number of women among the holders, † to every 100 men	Number of labourers per 100 hectares of productive land.	Beasts of burden per 100 hectares of husbandable land.	Number of hectares per holder.	Number of owners, farmers, and tenants	Number of labourers of both sexes, above 12 years of age.

‡ "Holders" includes both freehold and tenant-farmers.

* *Vide* my "Economie Rurale de la Belgique." The reader will pardon my referring him to a previous work of mine for particulars which need not be

This table is taken from the official statistics published by the Belgian Government in 1850. Those published in 1861 relate to the year 1856, and are less detailed. In the following table I have given the data relative to the two Flanders, Namur, Luxembourg, and the entire kingdom, as derived from those statistics. Although the two tables are drawn up on different statistical plans, the returns are about the same, and therefore the data may be considered the more trustworthy.

	FLANDERS, WEST.		FLANDERS, EAST.		LUXEMBOURG.

repeated here. Even in the writings of the best foreign authors errors occur with regard to Belgium. Thus Mr. Stuart Mill, in his "Principles of Political Economy," quotes a passage from MacCulloch in which Hainaut and the two Flanders are alluded to as being circumstanced alike—whereas, in fact, their conditions are different in every respect.

	NAMUR.		ENTIRE KINGDOM.

§ 13. It has often been argued from the example of Ireland that the subdivision of land must tend to produce an excessive increase of the population. Arthur Young prophesied that the subdivision of the soil would convert France into a rabbit-warren.

Now the fact is, that in no other country, not actually in a state of decadency, is the increase of the population slower than in France. The same may be said of Flanders, where the population increases at a rate much inferior to that of the rest of the kingdom—viz. :—

	POPULATION IN		Proportional Increase.
	1846.	1866.	
Flanders, West	643,004	659,938	2·6 per cent.
Flanders, East	793,264	824,175	3·8 per cent.
Entire Kingdom	4,337,196	4,984,351	15·1 per cent.

Yet in Flanders the soil is greatly subdivided, as shown by figures given above (§ 5).

§ 14. To prove the superiority of large farming, Arthur Young made the following calculation :—

To cultivate a district of 4,000 hectares, divided into farms of a single plough, 666 men and 1,000 horses would be required ; whereas, in farms of three ploughs apiece the same district would require only 545 men and 681 horses ; being a saving of 121 men and 319 horses, capable of other useful employment in the production of manufactured articles. Therefore the district with large farms will be better provided for than the one with small holdings, and consequently large farming is preferable to small farming.

Young's calculation is perfectly correct so far as it goes ; nevertheless only one thing is necessary to overthrow his conclusion—namely, that the smaller farms should yield more produce, and more valuable produce, than the large ones ; and this is precisely the case all over the Continent of Europe, without a single exception that I know of, wherever *la petite* and *la grande propriété* are seen in competition. “At the present day,” says M. Hippolyte Passy,* “on the same area and under equal circumstances, the largest clear produce is yielded by small farming, which, besides, by increasing the country population, opens a safe market to the products of manufacturing industry.” Which are the richest and most productive provinces of France ? Precisely those in which the small landowners are in the majority, especially Flanders and Alsace. In this respect I need but refer the reader to the works of M. Léonce de Lavergne.

In the eastern provinces of Prussia (Prussia proper and Posen) there are hardly any but large estates, worked by the owners themselves. In Westphalia and the Rhenish provinces there are to be found peasant proprietors and small farmers. The eastern provinces are inferior to those of the west, even with respect to live stock, as appears from the following table :—

There are to every square mile in the—

Provinces.				Mètres of Road.	Inhabitants.	Heads of Large Cattle.
Posen	5,000	3,000	2,980
Prussia	4,000		
Westphalia	14,000	6,000	3,569
Rhineland	17,000		
						4,024

Vide “Mémoires de l'Académie des Sciences morales et politiques—Séance du 4 Janvier, 1845.”

In the western provinces agricultural wages are double what they are in the eastern ones ; and while in the latter there are nine inhabitants to every house, there are but five and a half in the former.

As regards Saxony, Dr. Engel's well-known statistics have shown that small farms keep twice as much live stock as large ones.*

As to Italy, Mr. Kay expresses himself as follows in his "Notes of a Traveller":—"In 1836, Tuscany contained 130,190 landed estates. In the dominions of the Pope, from the frontier of the Neapolitan to that of the Tuscan state, the whole country is reckoned to be divided into about 600 landed estates. Compare the husbandry of Tuscany, the perfect system of drainage, for instance, in the straits of the Arno, by drains between every two beds of land, all connected with a main drain—being our own lately introduced furrow, till draining, but connected here with the irrigation as well as the draining of land—compare the clean state of the growing crops, the variety and succession of green crops for feeding cattle in the house all the year round, the attention to collecting manure, the garden-like cultivation of the whole face of the country—compare this with the desert waste of the Roman Maremma, or with the Papal country, of soil and productiveness as good as that of the Vale of the Arno, the country about Foligno and Perugia—compare the well-clothed busy people, the smart country girls at work about their cows' food or their silkworm leaves, with the ragged, sallow, indolent population lounging about their doors in the Papal dominions, starving, and with nothing to do on the great estates ; nay, compare the agricultural industry in this land of small farms with the best of our large farms districts, with Tweedside or East Lothian, and snap your finger at the wisdom of our St. Johns and all the host of our bookmakers on agriculture, who bleat after each other that small farms are incompatible with a high and perfect state of cultivation."

In Lombardy, in the province of Como, where *la petite culture* prevails, the value of the cattle per hectare in cultivation is 161 francs ; whilst in the province of Mantua, with its large farms and fine pasture land, it is but 94 francs.†

* *Vide* "Zeitschrift des Statistischen Bureau's des K. Sachsischen Ministeriums des Innern," No. 1, February, 1857.

† *Vide* my "Études d'Economie Rurale en Lombardie," p. 112, and Jacini's excellent book, "La Proprietà fondiaria in Lombardia."

In Portugal there are in the large-farming province of Alemtego but 329,277 inhabitants on an area of 2,454,062 hectares, with an annual production—exclusive of cattle—worth 54,762,500 francs, or 22·72 francs per hectare. On the contrary, in the small-farming province of Minho, there are on an area of 749,994 hectares, 914,400 inhabitants, producing—exclusive of cattle—37,756,250 francs per annum, or 50·34 francs per hectare, being more than twice the production of Alemtego.*

In Spain, compare Estremadura, the Castiles, or even Andalusia, with the kingdom of Valencia, and with Lower Catalonia. Where small farming prevails, the land is a garden; where the estates are large, a desert.

In Belgium, the small-farm provinces, the Flanders, own more cattle, yield more produce, are more carefully cultivated, and have more agricultural capital than those in which large estates are predominant, as will be seen from the subjoined table. Here I have compared East Flanders with Namur; and it is to be noticed that in the former province the land is much poorer than in the latter.

—	Namur.	Flanders, E.
Heads of cattle per 100 hectares	35	68
Working capital per hectare	francs 250	francs 450
Produce per hectare	„ 300	„ 600
Rent per hectare	„ 50	„ 93
Average selling price of land per hectare	„ 1,804	„ 3,218
Number of Inhabitants per 100 hectares	138	263

* With reference to Portugal, see the excellent work, “Compendio de Economia Rural,” by Senhor A. Rebello da Silva, Colonial Minister of Portugal in 1870; and J. Forrester’s “Portugal and its Capabilities,” in which we find the following passages:—“The Minho is justly termed the garden of Portugal” “The Alemtego is the largest, and perhaps naturally the richest, province of Portugal. Once the granary of Portugal, it is now the worst cultivated and most thinly populated of the entire kingdom. The reason of this change may be traced to the following fact. The fecundity of this province has been proverbial from the remotest times; and people of substance relinquishing the North, came here, and united many small farms in a few extensive estates, which have descended from father to son undivided, undiminished, and through mismanagement and neglect are at this moment so many waste lands in the possession of proprietors who themselves have not the means of cultivating them, and who will not allow others to do so. Hence, there being no employment for agricultural labourers, the Transteganos have dispersed themselves over the other provinces, leaving the feudal lords in full possession of their

§ 15. Let us carry out the parallel drawn by Arthur Young, between the results of large and small farming, by placing spade and plough side by side before us.

Throughout Flanders, and especially in the Waes country, the spade is often used to prepare the soil before sowing. To dig up one hectare with the spade, at the rate of 5 ares per diem, 20 days are required, and an outlay of 30 francs; whilst the same work done with the plough would cost no more than 6 or 7 francs, perhaps less. Thus, spade-work costs five times as much as plough-work, which is an enormous balance in favour of the latter.

Yet the Fleming persists in calling the spade a gold mine, (*De Spa is de Goudmyn der Boeren*); and in Lombardy they have a proverb to the same effect: *Se l'aratro ha il vomero di ferro, la vanga ha la punta d'oro*. (If the plough has a plough-share of iron, the spade has a point of gold.) How is this to be accounted for? Is it routine or miscalculation? Neither; the peasant only means to say that a large increase in the returns is well worth a larger outlay.

In Lombardy, it has been computed that in two fields of the same quality, and manured in the same way, one being worked with the spade and the other with the plough, the returns of the former were to those of the latter as 66 to 28. Assume the produce to be but double, it will make up for twice the excess of expense.

In Flanders, this difference is not very considerable for cereals; but the Fleming does not grow corn alone. In the same year in which corn comes up in the rotation he has a second crop (*récolte dérobée*), which of itself is worth three or four times the excess of 25 francs in the cost of spade-work; and if after this, he lifts such crops as flax, chicory, tobacco and colza, returning from 600 to 1,200 francs per hectare, the excess in the preliminary outlay dwindles down to a mere nothing. Young, and most English writers on agriculture after him, reason just as if no other crops were grown than cereals; a mistake with respect to the nature and objects of *la petite culture* which vitiates all their conclusions.

I am fully aware that these second crops may be derived also from the plough, and so they are indeed by many Flemish farmers, but then, in the first place, the land is better prepared

land, their pride, and their poverty" (p. 102). Of the south of Portugal it may also be said, *Latifundia perdidere Lusitaniam*.

by the spade for receiving the seed ; and secondly, to weed and to gather crops of this kind much more labour is required, and therefore a larger population by whom the spade-work too may be done. All these things go hand in hand, there being an intimate connection between such economic factors as large population, minute labour, rich produce, small rural industries, like flax-steeping and peeling, preparation of chicory, tobacco and hops, oil-pressing, &c. It is a system which must be looked at as a whole ; and it is one by which a country, one might say by nature incapable of cultivation, has become the garden of Europe.

Thus the example of Flanders shows that, as far as the production of wealth and even the clear produce are concerned, the spade ought to get a verdict in an action against the plough. I admit at once that it would be well for the spadesman could he have his work done for him by horses and steam engines, that his work is harder and his returns smaller than is good for man. But would he be happier, wealthier, better, under a land system under which he would be a labourer for hire without prospect of elevation? Especially would he be so on the barren sands of Flanders?

§ 16. The system of tenure usual in Belgium is a lease. In the Middle Ages there also existed the form of tenure known by the name of *métayage*, of which, however, traces are now to be found only in some of the *polders* along the coast of the German Ocean. The cultivation of land by the intervention of a bailiff or steward, so common in Eastern Europe, is a rare exception in Belgium.

The leases are, as a rule, very short—nine years at most ; very seldom indeed for so much as eighteen years. On the other hand, yearly tenancy and tenure-at-will are also very exceptional. All who devote attention to agriculture, even the agricultural societies, though consisting almost exclusively of landowners, admit that the leases are too short. The tenant is not encouraged to improve ; and if he does make improvements, he can hardly be said to reap the benefit of them. The landlords will not grant longer leases, because they want, in the first place, to keep a hold upon their tenants ; and secondly, to raise the rents when the leases expire. It may be said that throughout Belgium such increases of rent take place regularly and periodically.

The following table gives an idea of this continuous increase of rents since 1830:—

PROVINCES.	INCREASE ON RENTS FROM					RENT PER HECTARE.		
	1830 to 1835.	1835 to 1840.	1840 to 1846.	1846 to 1850.	1850 to 1856.	1830.	1856.	1866.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Fr. c.	Fr. c.	Fr. c.

Average of Kingdom . . .	9'10	12'74	5'90	2'94	17'14	57'25	82	102

Since 1866, rents have risen even more in proportion than during the preceding period. It may thus be affirmed that, since 1830, the value of land and the rents have doubled. This is a further proof of the proposition so clearly set forth by Mr. Mill, that while the rate of profit and of interest has a downward tendency in a progressing community, rent, on the contrary, tends to rise incessantly. Thus, the landowners actually reap all the benefit resulting from the progress made by the entire community in various directions. Part of this progressive increase in rent may be traced to improvements made by the farmers in the cultivation of the soil. By raising the rent, the landlord lays hold for himself of this advance in the value of the land produced by those who cultivate it.

The increase of the revenue the landlord derives from his land is not the result of improvements executed by himself; and the fact adverted to is a general one, which may be met with everywhere. In whatever cases landlords have actually made improvements, they have got the interest of the outlay in the shape of an additional augmentation of their revenue.

For these reasons, I think that the increase of rent, being due to the progress of society at large, and not to the exertions of the landowners, ought not in justice to benefit the latter alone. It would be but fair to divide this benefit. For a portion of it the tenant should come in; and this he would get

if he had a longer lease. Another part of it should fall to the share of the community at large, in the shape of an increase of the land-tax.

At the present day, the land-tax (*impôt foncier*) in Belgium amounts to about 21 million francs (£840,000). It ought to increase in some proportion to the augmentation of rent, so, however, as not to affect the revenue, which is the reward of improvements; but some portion of that general advance of rents which is the result of the general progress of the country, ought to be laid under contribution.

All this applies with equal force to the British Isles, but subject to some important restrictions, because, in the first place, English and Irish landlords do not put on the screw of a continual increase of rent with anything like the harshness habitual with Belgian landowners. In the second place, the local rates in England are high, and are rising progressively. Thirdly, rents have been raised in England much less in proportion than they are in Belgium.

Nevertheless, as regards the increase of rent, the land system of Belgium is not so bad as that of England. In both countries part of the clear profit of civilisation is sublimated, so to speak, and deposited in the shape of increased rent in the landlord's exchequer, even though he be an absentee or a do-nothing. But where there are a great many landowners, a large proportion of its inhabitants must come in for a share in the increased rent. If, on the contrary, they are few in number, they monopolise the whole of the social benefit. In the former case the working of the economic law of increasing rent will be harsher than in the latter; yet it will be acquiesced in when many benefit by it, while it must sooner or later arouse opposition where it tends to enrich a few families only. The system of rack-renting, which is so much censured in England, is generally practised in Flanders; nevertheless, the tenant bears with it in all meekness, notwithstanding the sufferings it entails on him. In the United Kingdom the landlord would scruple to shear his tenants as they are shorn in Flanders, yet he does not escape reproach; and this is easily explained by the fact that, for one landowner in England there are a hundred in Flanders. Still, on the whole, the system of tenure of land in Flanders is anything but worthy of imitation. There are too many tenant-farmers, and too few peasant-proprietors; the leases are excessively short, and the rents excessively high.

Arthur Young has said: "*Give a farmer a nine years' lease of a garden and he will make a desert of it.*" It is to the honour of the small farmers of Flanders, and of *la petite culture*, that they have falsified this maxim.

§ 17. Among the various systems of tenure of land in the Belgian and Dutch Low Countries, there is none more interesting to the student of agriculture than the *Beklem-regt*, in the province of Groningen. This is a kind of hereditary lease, something like fixity of tenure. The landlord can never raise the tenant's annual rent. The tenant, on the contrary (called the *Beklemde-meyer*), may bequeath his right of occupation, dispose of it, mortgage it, provided only he does not diminish the value of the land. The *Beklem-regt* is indivisible, and can be held only by one person. Whenever it changes hands the landlord is entitled to a fee called *propinen*, which amounts to one or two years' rent, and is fixed beforehand. This system dates from the Middle Ages, and is still constantly practised in Groningen, even on lands recently reclaimed, on polders, and on lands put in cultivation in the turf-bog region. It arises in the following manner:—Some landowners being in want of money, and not wishing to mortgage their lands, give hereditary leases of them for a sum of money, thus remaining nominally proprietors; they never part with the fee-simple. Moreover, when the land is sold, the fee-simple and the *Beklem-regt* are disposed of separately, and a higher price is thus realised.

All Dutch economists are alive to the advantages of the *Beklem-regt*, of which the principal ones are as follows:—

1st. It gives the tenant absolute security for the future, thus encouraging him to make improvements.

2nd. The tenant purchasing the right of occupation has less to pay for it than he would for the fee-simple, and yet acquires the same security. The higher the rent, the less money he pays. In Ireland, on the contrary, no real right is obtained by purchasing the goodwill or tenant right, and the new tenant must pay the same rent as others. In Groningen, an hereditary right of occupation is acquired, and the rent to be paid is moderate and invariable.

3rd. The *Beklem-regt*, being indivisible, prevents compulsory or injurious subdivision. If the division is beneficial, the landlord consents to it in consideration of a share in the profits to be gained by it.

4th. The *Beklem-regt* precludes the immoderate increase of the population, because, on the one hand, it limits the number of farms, and on the other, because the farmer himself being in good circumstances, his sons are not likely to allow themselves to fall into distress.

5th. By this mode of tenure a number of well-to-do quasi-proprietors are made to reside in the country, cultivating the land with capital and science, whereas if the landlords were to hold the land themselves they would go and live in the towns, and let their estates to tenants at ruinous rents.

Thus, instead of tenants with the fear of losing their holdings always before their eyes, and ground down by ever-increasing rents, this system, derived from the Middle Ages, has created a class of semi-proprietors, independent, proud, simple, but withal eager for enlightenment, appreciating the advantages of education, practising husbandry not by blind routine and as a mean occupation, but as a noble profession by which they acquire wealth, influence, and the consideration of their fellow-men; a class ready to submit to any sacrifice to drain their lands, improve their farm-buildings and implements, and looking for their well-being to their own energy and foresight alone.

Systems of tenure of land similar to the *Beklem-regt* used to exist in the Channel Islands and in Brittany, by the name of *domaine congéable*, in Lombardy by the name of *contratto di livello*, and in Portugal by that of *aforamento*.* As long as the hereditary tenants cultivate the land for themselves, the *Beklem-regt* is attended only with beneficial effects; but as soon as they sub-let it becomes subject to the drawbacks of common leases, with the difference that in that case the sub-tenant must pay a double rent—viz., the fixed one to the landlord, and a variable one to the hereditary tenant.

Could the *goodwill* in Ireland be converted into *Beklem-regt* or *aforamento*, the country might perhaps be saved by it. But then the Irish peasants would, in the first place, have to respect the *indivisibility* of their leaseholds and of the farms for which these are granted. Moreover they would have to pay to the landlords themselves, not to the outgoing tenants, the price of the hereditary leases for which they would come in. One must add, however, that it would in all probability be very difficult to make them understand and appreciate this mode of tenure. Even in the provinces adjoining Groningen, where the whole-

* *Vide* the note on *aforamento* at the end of this essay.

some effects of this system are seen and appreciated, it is not adopted.

Lawyers, inspired with the ideas of uniformity and simplification of the French Revolution, are moreover opposed to a system which formerly used to prevail in a great part of Europe. It has likewise disappeared in many countries by degenerating from its original form, or by reason of being coupled with improper regulations. In Lombardy the *contratto di livello*, enforcing certain payments in kind, prevented the hereditary farmer from growing such crops as he liked, and thus formed an obstacle to progress in husbandry. Instead of trying to do away with this system, it should be preserved, and even brought into general use, with improvements in its form.

§ 18. The Flemish *Pachters-regt*, or farmer's right, consists in the liability of the incoming tenant to pay the outgoing one for the value of the straw and manure on the land, besides the manure in stock, and the manure and crops on the ground; being a compensation for *unexhausted improvements*, but given on a more systematic plan than in England.

The existence of this custom in Flanders dates as far back as the Middle Ages, which is another instance of the progress the country had achieved, even in those remote days. At present the *Pachters-regt* varies according to districts, and the differences seem to coincide with the areas occupied of old by the various German tribes. In the neighbourhood of Ypres and Courtrai, not more than one-third of the value of the manure from which a crop has already been raised, is given; near Ghent, the indemnity amounts to one-half of that value; and in the Waes country a fixed rate of twenty-one francs is paid per hectare for the manure sunk in the two foregoing years. The total amount of compensation varies according to the state of cultivation of the land and the time of taking possession of it.

In the southern districts, where the leases commence in October, the *Pachters-regt* applies only to the half-exhausted manure and the manure kept in tanks, and does not exceed 70 or 80 francs per hectare on an average; whilst in the neighbourhood of Ghent, where the farmers take possession at Christmas, or on the 1st of March, the indemnity is paid for the crops in the ground as well as the manure, and amounts

to 400 or 500 francs for every hectare sown with corn (emblavé).*

In Mr. Caird's "Letters on English Agriculture" it is stated that in the counties of Surrey and Essex an *inventory* is usually drawn up, similar to the Flemish *prizy*, which is an inventory of unexhausted improvements. However, Mr. Caird is not very much in favour of a custom which, in his opinion, is attended with the following two drawbacks:—

1st. Costly valuations, lawsuits, and law expenses.

2nd. The compensation for the inventory exhausts the resources of the incoming tenant.

Neither of these two drawbacks exists in Flanders, and neither ought to exist in England. The inventory is drawn up by experts, and frequently by the notary of the locality, at a trifling expense, and litigious proceedings hardly ever arise from this. Where the crop in the ground is to be valued, as in the neighbourhood of Ghent, the operation is indeed attended with some difficulties; but where the new-comer takes possession in October, as in the environs of Courtrai, nothing need be valued except the farmyard manure (of which the cubic volume may be readily ascertained), and the half-exhausted manure; and the inventory is taken with the greatest facility.

As regards the alleged diminution of the incoming tenant's resources, this charge is groundless; on the contrary, the *prizy* increases his capital. He pays for manure on the spot, which he would otherwise have to procure from some remote quarter. It is owing to the *prizy* that the outgoing farmer does not neglect the land even in the last year of his tenure, and the incoming tenant finds it in perfect condition, instead of its being exhausted and overgrown with weeds. No outlay is less regretted by the Flemish farmer than the one for the inventory. His saying is, *Hoe hooger hoe beter*, the higher the better.†

In Flanders all agricultural authorities agree that the *Pachters-regt* is indispensable to good culture. They go so far as to demand, in the interest of rural economy, that the local customs relative to this right be systematised and regulated by

* In an interesting manual for valuers of indemnities to be paid to outgoing tenants, entitled "Het Pachters-regt, door L. Delarue en van Bockel," I find valuations of compensations for lands sown with barley, colza, and wheat, amounting to from 400 to 500 francs per hectare; of which upwards of 300 francs are for manure.

† I need hardly add that nothing of all this applies to the Ulster tenant right as described by Lord Dufferin on "Irish Tenure," p. 116.

law. In fact, the land in Flanders is naturally so excessively poor that if the outgoing tenant neglects it during the last two years of his occupation, the farm is ruined, and a great expenditure becomes necessary to put it into its proper condition again.

The Flemish *Pachters-regt* deserves to be introduced everywhere, for the following reasons:—

1. It is equitable, compensating as it does the farmer for his improvements and good cultivation.

2. It prevents the exhaustion of the land during the last two or three years of the lease.

3. It furnishes the incoming farmer with manure, which it is his interest to have. Both the Flemish and the Chinese properly think that there is no better investment to be made than in manure.

§ 19. Those who cultivate the soil are either landowners, tenants, or labourers. Let us now examine the condition of each of these three classes in Flanders.

If the cultivator of the land is the owner of it at the same time, his condition is a happy one in Belgium, as everywhere else, unless the plot he holds is insufficient to support him, in which case he has to eke out his existence by becoming also a tenant or labourer. But, as a rule, the peasant-proprietor is well off. In the first place, he may consume the entire produce of his land, which being very large, especially in Flanders, his essential wants are amply satisfied; secondly, he is independent, having no apprehensions for the future; he need not fear being ejected from his farm, or having to pay more, in proportion as he improves the land by his labour.

Yet the mode of living of the little landowner, who works as a peasant, differs very little from that of the tenant-farmer. His food is about the same, except that he eats bacon more frequently, killing a pig or two for his own use, and that he drinks more beer. His clothes, habits and dwelling also resemble those of the other class, save that they denote rather easier circumstances. He lays money by to purchase land and give his farm a better outline; and it is owing to the competition of peasant-proprietors in the land-market that the value of real property is rising so rapidly.

What remains to be desired is not that the peasant-proprietor should add to or refine his wants, for the progress of civilisation

is not co-extensive with that of epicureanism,* but that he should pay more attention to his own intellectual improvement, and to this a portion of his annual savings might very well be devoted.

The situation of the small Flemish tenant-farmer is, it must be owned, rather a sad one. Owing to the shortness of their leases, they are incessantly exposed to having their rents raised or their farms taken from them. Enjoying no security as to the future, they live in perpetual anxiety. So much does this fear of having their rents raised tell upon their minds, that they are afraid to answer any question about farming, fancying that an increase of rent would be the inevitable consequence.

Rack-rents leave the small farmer barely enough to subsist on. I do not think his working capital returns three per cent., and he works himself like a labourer. However, he is always properly clothed, and on Sundays he dresses just like a *bourgeois*. His wife and daughters, who work barefooted during the week, are stylishly dressed on Sunday, wearing bright-coloured gowns, ornaments, and flowers in their hair.

It ought to be added that suitable farm-buildings are almost always erected by the landlord, and remarkably well kept by the tenant; this is quite a traditional custom in Flanders, and has been so for many ages. Every one is alive to and respects the requirements of good farming. The properties cultivated by the proprietors themselves, although in a minority, form a kind of model or type, and every one does his best to imitate them. They are looked upon as standards from which the peasants would be ashamed to depart very far. Their influence in this respect has been very forcibly pointed out by Mr. Cliffe Leslie in a remarkable article on "The Farms and Peasantry of Belgium,"† in which he says: "As Falstaff could boast of being not only witty himself, but the cause of wit in other men, the peasant-proprietor may boast that he is not only a good farmer himself, but the cause of good farming in other men."

Nothing gives a more charming idea of country life than the little farmhouses of Flanders, especially in the Pays de

* In my opinion it is a great mistake to consider the refinement of wants and luxury in private life as a *criterion* of civilisation. In the best days of ancient Greece, private comfort was all but unknown. In ancient India and Judæa, the men whose minds conceived the ideas on which our moral life is based, lived in quite a primitive way.

† Vide *Fraser's Magazine* of December, 1867, and T. Cliffe Leslie's valuable book, "Land Systems in Ireland, England, and the Continent."

Waes. With an orchard in front, where the cows graze in the shadow of the apple-trees, surrounded by well-kept hedges, the walls whitewashed, doors and window-frames painted in green, flowers behind the windows, the most perfect order everywhere, no manure lying about, the whole presents an appearance of neatness, and even of ease and comfort.

The reason why these small farmers are ground down by rack-rents is that there are too many of them. On 100 hectares, or one square kilometre (0.386 square mile), there are in West Flanders 200, in East Flanders, 270 inhabitants, against 76 in France, and 136 in Lombardy. The peasants of Flanders unfortunately will not leave their own province, and their intense competition for farms raises the rents in a manner ruinous to themselves.

Above the small farmers there is a class of small proprietors, who profit without scruple by this competition. Having just enough to support themselves, they do not trouble themselves about the condition of the farmer or anything else, being anxious to maintain "their position in the world," as they term it.

No parallel can be drawn between the Belgian and the English landowner. The latter, I believe, acts upon considerations unknown on the Continent, and no inference can therefore be drawn from so exceptional a case. Not that the English landlord is *intus et in cute* better than other men; but he is subject to a higher public opinion, and being a much wealthier man, he is not tempted to screw the last farthing out of his tenant. Hence the condition of the English tenant-farmer is a happier one than that of the Flemish.

As a rule, peasant property is an excellent thing wherever the proprietor is himself the cultivator; but where it exists side by side with leasehold farming in an over-populated country, the tenant-farmer is placed in a worse condition than if the estates were large. It is, however, most important to bear in mind, in comparing the condition of the agricultural population in Flanders and England, that the small Flemish farmer who cultivates his land with his own hands corresponds, not to the English tenant-farmer, but to the English farm-labourer. Now our small farmer, though hardly better fed than the English agricultural labourer, has a decided advantage over the latter; he doubtless has the cares and responsibility his superior position entails, but on the other hand he acquires from it

habits of providence and self-control, and the exercise of his intellectual faculties.

Let us next glance at the condition of the agricultural labourer in Flanders. His wages are very low, ranging from 1 fr. 10c. to 1 fr. 50c. per day, without board. In the Walloon country, in which are all the large centres of industry, the wages are about double of this, owing to the mines and manufactories competing with the land in the labour-market. Some facts connected with this are almost incredible. In the environs of Liège, an agricultural labourer earns $2\frac{1}{2}$ francs a day, while near Hasselt, at a distance of no more than four leagues, he earns but one franc; the country is Flemish, and he is prevented by the difference of language from going to a Walloon district, in which he might earn much higher pay.

For breakfast the Flemish labourer has bread and butter, with chicory, coffee, and milk; for dinner, potatoes, vegetables, and bread; at 4 P.M., bread and butter again, and for supper the same fare as for dinner; very seldom a little bacon, and as for butchers' meat—four or five times in a year. Those who live with the farmers get pork more frequently.

On the other hand, the farm-labourer is generally well housed. For himself and his family he always has a house, with at least two, more frequently four, rooms, generally kept in good condition, and having an acre or half an acre of land belonging to it, where the man grows vegetables, potatoes and rye; and there is besides a goat which gives milk to the household.

NUMBER of FAMILIES for every 100 HOUSES in the RURAL DISTRICTS of

	1846.	1856.
Flanders, West... ..	103	101
Flanders, East... ..	104	102
The Entire Kingdom	104	104

Thus, the number of houses in Flanders has increased as compared with the rural population, who have by this means found better accommodation.

No remarks need be made on the beneficial effects of a good home on a man's morality and self-respect. This applies to the country as well as to towns, and accounts for the fact that the Flemish population, badly fed and little educated as it

is, yet presents all the outward appearance of well-being and civilisation.

It may be affirmed that in normal years no pauperism is to be found in the rural districts of Flanders, and beggars are very rare. The labourers and small artisans live poorly; yet having nearly all of them a little plot of land to work, they are at any rate kept from starving. At the time machinery supplanted hand-spinning, a severe crisis took place indeed; but the last traces of it have now disappeared.

A stranger visiting Flanders should guard against rashly drawing unfavourable inferences from certain facts arising from custom. A Walloon, for instance, seeing women working in the fields barefooted, is apt to consider it is a proof of extreme destitution. He is, however, in error. It is the custom of the country. A well-to-do farmer's daughters, who are stylishly dressed on Sundays, will work barefooted during the week. The same observation applies to the rye-bread, which the country people eat, as a rule, simply because they have done so for centuries, although they can often afford to eat wheaten bread; which, by the way, is coming into more general use at present.

§ 20. In my work on the rural economy of Belgium, I made some reflections on the indifferent condition of the Flemish peasants, from which inferences adverse to peasant proprietorship have been drawn. These conclusions are erroneous. The evil arises from the fact that there are too few small proprietors and too many small tenants among the peasantry of Flanders.

If you want to find a district in Belgium where the peasants are well off, you must go to Lower Luxembourg. There the land is divided out into a multitude of peasant properties, almost the whole of which are cultivated by the owners themselves. Each of these manages his own farm, and under the shadow of his fruit-trees enjoys in security what he earns by the sweat of his brow. This is a kind of rural opulence, due not to the possession of large capitals, but to the abundance of rural produce. No one is rich enough to live in idleness; none so poor as to suffer from want. The peasant there is also more enlightened than in Flanders, and more independent. The situation is nearly the same as that of the Canton of Grisons, in Switzerland.

A few figures will indicate the contrast between Flanders and Luxembourg; in each of the two provinces I shall select a normal district.

Flanders. District of St. Nicholas, in the Pays de Waes. Farm-labourer's wages, 1 franc 10 centimes per day.

Area of land worked { by owners, 6,556 hectares.
by tenants, 31,689 hectares.

Luxembourg. Bouillon and Paliseul district. Farm-labourer's wages, 2 francs per day.

Area of land worked { by owners, 10,699 hectares.
by tenants, 1,563 hectares.

Thus, in Lower Luxembourg the labourer's wages are double what they are in Flanders, although most articles of food, especially meat and potatoes, are cheaper in the former province.

§ 21. The farmers of Holland lead a comfortable, well-to-do, and cheerful life. They are well housed and excellently clothed. They have china ware and plate on their sideboards, tons of gold at their notaries', public securities in their safes, and in their stables excellent horses. Their wives are bedecked with splendid corals and gold. They do not work themselves to death. On the ice in winter, at the kermesses in summer, they enjoy themselves with the zest of men whose minds are free from care.

The Belgian farmer, we have shown, is neither as rich as his Dutch neighbour, nor can he enjoy himself in the same way.

One reason is that in Holland the townspeople have at all times invested their savings in public securities, and generally left landed property alone, which has thus remained entirely in the hands of the peasants. In Belgium, on the contrary, the nobility have retained large landed property, and capitalists have eagerly bought estates. Hence a good number of the peasants have become mere tenants.

To meet with the idea of rural life, you must look for it in Groningen or in Upper Bavaria.

§ 22. Pliny's saying, *Latifundia perdidere Italiam*, has sounded like a warning voice across centuries. The *latifundia* of the Roman aristocracy first devoured the small estates, then the small proprietors, and, when the Barbarians made their appearance, the empire had become a solitude.

The *Estados* of the grandees of Spain have also destroyed the small landowners, whose place has been taken by bandits, smugglers, beggars, and monks.

Tiberius Gracchus was the only Roman who understood the economic situation of his country. Had the laws proposed by him been adopted, the decline of the Republic might perhaps have been prevented.

It is the glory of England to have remained free from the consequences usually attending the large-property system. Great Britain possesses a class of landowners and tenants alive to the requirements of agriculture; and her gigantic commerce has provided employment for the small freeholders whose lands have been swallowed up. But on the Continent the case is vastly different; and the reason of this is to be found in the facts noticed with reference to Belgium.

Here large farms are, as a rule, not so well cultivated as small ones, and this is easily accounted for. To work a farm of 200 hectares with as much capital as Flemish small farmers do, 100,000 francs (£4,000) would be required. Now, a man who commands such a sum will not become a farmer; he will either go and live in a town, become a functionary, or employ his capital in business; hence the working capital of large farms is, as a rule, insufficient, and therefore the returns from these are smaller, and they let at less rent. Thus an additional stimulus is given to subdivision.

This being the case in Belgium, it must *à fortiori* be so in countries in which husbandry is more behindhand. In Eastern Europe—*e.g.*, in Hungary, Poland, and Prussia—large estates are farmed by the proprietors themselves, in the absence of tenants of sufficient capital.

Even in England, would not the land be more carefully cultivated were there a number of peasant proprietors? * and, supposing there were 200,000 small farmers more than there are now, might there not be 500,000 fewer paupers less to be supported? I only put the question, not feeling myself competent to decide it.

§ 23. *Free trade in land.*—I borrow this title from an interesting work published by Mr. W. Fowler, M.P. In our western world it seems to me necessary that there should be

* See the excellent article on the "Channel Islands," by M. Zincke, in the *Fortnightly Review*, 1st Jan., 1876.

no obstacle to land changing hands, in order that it may be distributed in conformity with the laws of political economy, and become the property of those who can turn it to the best account.

To this end, the first requisite is that all those restrictions should be done away with by which landed property is rendered immovable in the possession of certain families ; for example, primogeniture, entails, &c. In the second place, every one ought to be able to purchase a lot of land without heavy expenses, and with perfect security. If the purchase of an estate involves law-suits, risks of title, or considerable costs, then the rich only can indulge in the luxury. The continuance anywhere of so intolerable a state of things can only be accounted for by the fact that it is the interest of lawyers and of the wealthy to maintain it ; the former for the sake of the legal business it creates, the latter because it keeps the land market to themselves.

As regards the transfer of land and the law of mortgage, Belgium may be considered a model country. The following is a synopsis of the laws in force in this respect :—

Since the passing of the Act of December 16, 1852, modifying the then existing law, the sale of land takes place by a deed executed before a notary, or else by one under a private seal recognised in law. Deeds under private seal used to give rise to irregularities, and to serious dangers whenever the authenticity of the signature was contested. By the following compulsory forms of law the purchaser obtains perfect security with regard to mortgages. His notary is bound to obtain a certificate (*état négatif*) from the Registrar or Keeper (*Conservateur*) of Mortgages, showing that there are no outstanding charges against either the seller or the former owners. The notary is personally responsible for neglect to take this precaution, and the Registrar of Mortgages would also be liable to an action for damages were he to omit to give notice of any incumbrances. If there be any incumbrances of this kind, they may be deducted from the selling price, and in that case the purchaser assumes the seller's liability ; or else the purchaser may pay off the creditor, who then gives him a discharge of the debt.

The law of 1851 has done away entirely with *hypothèques tacites ou légales*. All unregistered mortgages are invalid against the purchasers of an estate,

Along with the certificate against incumbrances an *état des mutations* must be obtained by the notary—*i.e.*, a statement of all the changes of hands the property has undergone since a fixed date prior to the sale, and establishing the title of the vendor. The notary must moreover take the precaution to obtain an extract from the *matrice cadastrale*, or otherwise a copy of the official survey. Notice is given of every transfer of landed property to the *administrateur du cadastre*, by the offices of registration and succession duties, as well as by his own surveyors, who make periodical circuits, and ascertain, *de visu*, what modifications the land has undergone. A good surveyor knows the “parcels” of his district just as well as a shepherd does his sheep.

The notary draws up the deed of sale, which is signed by the parties, two witnesses, and himself. The *minute* or original of the deed is brought to the office of the Registrar (*receveur de l'enregistrement*) who puts an abstract or summary of it on his register. By this formality the purchase and its date are fully authenticated; but the primary object of it is to secure the Government duty, which amounts to 4 per cent., plus 30 *centimes additionnels*, altogether to 5 fr. 20 c. per cent. of the selling price.

After this the deed undergoes *transcription*. It is then no longer the minute that is lodged with the registrar of mortgages, but a duplicate duly executed. The registrar transcribes it in full; this transcription establishes the legal transfer of the property as far as third parties are concerned. Under the *Code Civil*, transcription was not required to validate a transfer. Under the present law, the purchaser who has been the first to have his deed transcribed is the legal proprietor. The transcription is subject to a duty of 1 fr. 30 c. per cent., with some *centimes additionnels*. The notary's fees vary according to the value of the property transferred.

The essential features of the process may be summed up as follows :—

1st. A deed of transfer is executed before a public officer (the notary), who is responsible for its proper legal form. The original remains in the notary's hands, and forms the title-deed; and thus individuals are secured against the loss of their title.

2nd. This document is transcribed on a public register, with a statement of the mortgages, if any, on the estate transferred. An extract from this register may be had for a few

francs, and thus any one may readily ascertain to whom an estate belongs, by what right it does so, and what incumbrances, if any, there are on it ; and all this without any uncertainty or obscurity.

3rd. The official survey contains a plan of each township (*commune*), with the parcels, their areas, annual values, and peculiarities marked on it ; and in every *commune* in the kingdom there is to be found a copy of the plan of its territory, which may be referred to by the inhabitants, and from which they may claim an extract.

In Belgium the transfer duties (which are very high, about seven per cent. of the selling price) are levied on the property sold ; but this tax is a bad one, impeding free trade in land. In Prussia, where the same legislation exists, the tax amounts to no more than one and a half per cent., and the notary's fees are very low. If the Government requires the amount of the tax, it had better impose it on land directly, by increasing the land-tax. It falls on the owners of land in either case, but in the latter there would be the compensatory advantages arising from unimpeded sale of their land. In other respects the system is perfect. The *cadastre*, or official survey, ascertains the areas, boundaries, and properties of estates ; the notary puts the deed of transfer into its proper legal shape, and the transcription on a public register fixes the date of the transfer and publishes it to the world. There is, in short, absolute authenticity combined with full publicity, being just the two things needful. It is the duty of the State to make these formalities compulsory, a public and not merely a private interest being at stake.

It is of the highest public interest, in the first place, that landed property should easily get into those hands by which it can be turned to the best account ; secondly, that the title to property in land should be secure and incontestable ; and, thirdly, that there should be no legal obstacles to the subdivision of land when the natural economy tends to it, so that the number of small landowners should not be artificially reduced by imperfection in the law.

The Belgian system is only an improvement on that of the French law, which has been successively adopted by almost all continental countries, on account of its conspicuous usefulness.

As long as England does not introduce security, publicity, facility of exchange, in fine, *free trade* into everything connected

with property in land, there will ever be an insuperable obstacle to the establishment of an agrarian system in keeping with the wants of modern society. A reform in this particular branch of English law is, in my opinion, the most urgent of all.

§ 24. We have seen that much larger gross returns are everywhere obtained from the land by small than by large farming. This is certainly a great, but not the greatest, boon accruing from it.

The larger the number of landowners is in a country, the more free and independent citizens there are interested in the maintenance of public order. Property is the essential complement of liberty. Without property man is not truly free. Whatever rights the political constitution may confer upon him, so long as he is a tenant he remains a dependent being. A free man politically, he is socially but a bondsman.

In Belgium most tenant-farmers enjoy both the municipal and parliamentary franchise. But this right, so far from raising them in the social scale, is but a source of mortification and humiliation to them, for they are forced to vote according to the dictate of the landlord, instead of following the dictates of their own inclinations and convictions. How can they feel any attachment to a constitution which, in conferring a new right, really at the same time rivets a new chain on them? The electoral franchise is but a mockery and a snare to the cultivator without either proprietorship or a long lease.

It may be thought a matter for surprise that, in Flanders, feelings hostile to social order nevertheless do not manifest themselves, and that agrarian outrages are never perpetrated as in Ireland, although I think it certain that, in consequence of excessive competitions, the Flemish farmer is much more ground down by his landlord than the Irish tenant. The fact that in Flanders, as in all countries in which landed property is distributed among a large number of owners, the ideas called socialist, in the bad sense of the word,* have no influence, is to be accounted for as follows :—

The Flemish tenant, although ground down by the constant rise of rents, lives among his equals, peasants like himself who

* I think it is to be regretted that a disparaging meaning should attach to this word. Are not those who devote themselves to social science, socialists? When, in 1848, Proudhon was asked in the Committee of Inquiry, "What is socialism?" he replied, "A general desire for improvement." "Then we are all of us socialists," remarked the chairman of the Committee.

have tenants whom they use just as the large landowner does his. His father, his brother, perhaps the man himself, possesses something like an acre of land, which he lets at as high a rent as he can get. In the public-house peasant proprietors will boast of the high rents they get for their lands, just as they might boast of having sold their pigs or potatoes very dear. Letting at as high a rate as possible comes thus to seem to him to be quite a matter of course, and he never dreams of finding fault with either the landowners as a class or with property in land. His mind is not likely to dwell on the notion of a caste of domineering landlords, of "bloodthirsty tyrants," fattening on the sweat of impoverished tenants, and doing no work themselves; for those who drive the hardest bargains are not the great landowners, but his own fellows. Thus the distribution of a number of small properties among the peasantry forms a kind of rampart and safeguard for the holders of large estates; and peasant property may, without exaggeration, be called the lightning conductor that averts from society dangers which might otherwise lead to violent catastrophes.

The concentration of land in large estates among a small number of families is a sort of provocation of levelling legislative measures. The position of England, so enviable in many respects, seems to me to be in this respect full of danger for the future.*

§ 25. The idea that all men are equal, placed at the head of all modern constitutions, and announced as an axiom throughout the world, is a new idea, the wholesome or baneful effects of which it is as yet impossible to foretell. The gospel proclaimed the equality and fraternity of all men: but it was to Christians a heavenly ideal, which they did not feel called upon to realise in this world. The Reformation, the United States Constitution, and the French Revolution, made of it a terrestrial ideal, of which the consequences must be logically followed up; it only remains to be seen to what extent these consequences are to be carried.

Tocqueville, in his book on Democracy, has admirably shown the effect of the equalitarian principle in politics; but he has not pointed out with equal clearness the economic

* *Vide* Mr. Cliffe Leshe's remarkable Article on the Land System of England, in *Fraser's Magazine*, February, 1867.

consequences it is likely to entail ; and these precisely absorb, at the present day the attention of all those who can see and understand.

The idea that all men have equal rights, though proclaimed everywhere, has not yet taken root enough to become a living and earnest conviction, resolute on action. To the upper strata of society this idea is like a vague threat hanging over them ; to the lower ones, like a light of hope in a distant future ; but being incessantly repeated at workmen's congresses and meetings, it is likely to diffuse itself through all classes, especially those whose interest it is to believe it to be true.

Now suppose this idea universally and ardently embraced in a country in which the larger part of the land is in few hands, what sentiment is it likely to give birth to among the masses ? They will say : " If we are equal, how is it that a caste has perpetual possession of the land, and that we are perpetually doomed to support this caste by the produce of our labour ? Has God made the land only that a privileged few shall enjoy it ? Property is said to be the creature of labour. How is it, then, that we ever behold idleness and opulence on one side, and labour and destitution on the other ? According to the laws of nature, he who works ought to reap the fruits of the earth, whilst he who lives in idleness should suffer hunger ; but does the perfection of social laws consist in keeping the drone in abundance and the bees in distress ? "

I will not carry the argument further ; it will be readily understood. This was precisely the language held by the peasants who revolted in Germany, when Luther spoke of evangelical equality to the feudal society of the sixteenth century. These ideas may be drowned in blood, as they were on that occasion, as they were in France at the time of the *Jacqueries* ; but they will always revive and redouble the danger to society in countries where inequality appears like an institution conspicuous to the sight of all.

It is a grave symptom of the emergency that the upper classes themselves no longer remain inaccessible to these ideas. A distinguished member of the British Parliament, to whom I pointed out that certain measures proposed for Ireland looked remarkably like " confiscation," replied to me, " No doubt they do ; but why should they not ? Is it not just that every one should have his turn ? " And really, if but a few are

chosen to sit down to the feast of life, why should these guests be always the same? This is in its crudity the idea which involuntarily rises in the mind. It is all very well for lawyers and economists to prove its absurdity, but one and the same argument produces a different effect on the man who is seated at table and the man who waits upon him; what may seem absurd to the man who has the good side of the present *régime* may appear perfectly right and proper to him who has come in for the bad side.

Travelling in Andalusia in 1869, I lighted upon peasants harvesting the crops on the lands of Spanish grandes, which they had shared among themselves. "Why," said they, "should these large estates remain almost uncultivated in the hands of people who have neither created nor improved them, but are ruining them by spending elsewhere the net produce they yield?" I am convinced that were land more divided in those districts of Andalusia, where ideas of communism prevail at the present day, these would no longer find any adherents. In Belgium, socialism, though spreading among the working classes in manufacturing districts, does not penetrate into the country, where the small landowners block up its way.

Therefore I think the following propositions may be laid down as self-evident truths:—There are no measures more conservative, or more conducive to the maintenance of order in society, than those which facilitate the acquirement of property in land by those who cultivate it; there are none fraught with more danger for the future than those which concentrate the ownership of the soil in the hands of a small number of families.

APPENDIX I.

ON THE AFORAMENTO IN PORTUGAL.

IN the following note are collected some highly interesting particulars of this mode of tenure, for which I am indebted to a Portuguese economist, Mr. Venancio Deslandes, Director of the royal printing-office.

The *aforamento* is very much like the *Beklem-regt*, in Groningen, *i.e.*, an hereditary lease by which the right of occupation is granted indefinitely in consideration of an annual rent *fixed once for all, which the landlord can never increase*. This right passes on to the heirs, who, however, cannot subdivide the estate, the *aforamento* being essentially indivisible; therefore one of the heirs must take it as his share, and indemnify the others. Where this cannot be done, and the heirs do not agree, the *aforamento* is sold, and the purchaser then holds it subject to the same conditions as the seller. If there be no next of kin and no legatee, the *aforamento* expires, and the landlord re-enters into possession.

Again, if the hereditary tenant allows the land to deteriorate so as to reduce its value to one-fifth over and above the capitalised rent, the landlord resumes the right of possession without any compensation to the tenant.

Besides the yearly rent, the landlord was formerly entitled to levy a duty, whenever the land changed hands, which was called *luctuosa*, if the change took place in consequence of a death, and *laudemium*, if in consequence of a sale. The new civil code in force since July, 1867, which in many instances betrays, like its French prototype, a hostility to everything pertaining to the ancient *régime*, has done away with these dues as feudal charges.

Another and severer blow has been dealt to the *aforamento* system, by the new code prohibiting a holder from bequeathing the sole right of occupation to the one of his children he might designate. The division of all property into equal shares being made compulsory, and the *aforamento* being indivisible, a conflict arises between the two principles. The *aforamento* is then sold, and taken from the family who had held it perhaps for centuries.

The *aforamento* dates from the earliest times of the Portuguese monarchy. It was introduced by monastic orders, especially the Benedictines, on the lands they owned, and since then has gradually become general throughout Portugal north of the Tajo. Even down to this day, contracts of this kind are made between private parties; and if townships let common lands to the inhabitants, this is often done by *aforamento*.

Private persons let land at fixed rents, and in consideration of the fixity of tenure they grant, the payment of a certain sum of money is stipulated for, which represents the price of perpetual enjoyment by the tenant without increase of rent; by submitting to an immediate sacrifice he gains

perfect security for the future. The people used to have, and have even at this day, a great predilection for this kind of contract ; both farmers and landlords agree in appreciating the great advantages it offers. These are especially evident in the province of Minho, so celebrated for the perfection of its husbandry, the well-being of its inhabitants, and the magnificent appearance of the country. There, all lands are held by *aforamento*, and by this system of hereditary tenure its prosperity is accounted for.

I met with *aforamento* very frequently in the environs of Lisbon, especially in the magnificent country adjoining the Cintra Road.

Unfortunately legislation, prompted by French ideas, has declared war against this excellent system of tenure, with a view to carry out what is called the liberation of the land, *i.e.*, the reconstitution of absolute property, and the adoption of the common kind of lease. This is an error ; for every institution is good which is calculated to give security of possession to him who cultivates the land.

[NOTE.—An interesting account of the Portuguese land tenure called “Aforamento,” or “Emphyteusis,” is to be found in Mr. Oswald Crawford’s “Portugal, Old and New:” see Chap. V., entitled “Farming and Farm People.”—ED.]

APPENDIX II.

Added Feb., 1881.

EXTENT AND SUB-DIVISION OF LANDS UNDER CULTIVATION.

THE extent of all descriptions of land cultivated by the inhabitants amounted in 1866 to 2,663,753 hectares,* of which 1,359,795 were cultivated by the owners, and 1,323,958 were cultivated by tenants. The 2,663,753 hectares were sub-divided among 744,007 cultivators, comprising—

- 1.—246,301 proprietors of all the lands they cultivated.
- 2.—74,670 proprietors of more than half of the land cultivated by them.
- 3.—279,433 tenants of the whole of the lands which they cultivated.
- 4.—143,603 tenants of more than half of the lands cultivated by them.

The following table compares the statistics of 1846 with those of 1866 as regards these divisions of agricultural holdings :—

LANDS UNDER CULTIVATION.	1846.					1866.

" 50 " and over	883	476	1,545	1,429	4,333	2,396	427	1,707	997	5,527
TOTALS ...	119,312	81,914	234,964	136,360	572,550	246,301	74,670	279,433	143,603	744,007

* The hectare = 2 acres 1 rood 35 perches.

These figures show that there were in 1846 about 35 per cent. of the cultivators who were owners of the whole or more than half of the land which they cultivated; and about 65 per cent. were tenants of the land, or more than half of the land they cultivated.

In 1866 there were 43 per cent. of the first-named category, and 57 per cent. of the second. Those who belong to the second category continue to be in the majority; thus these figures show that the cultivators who are owners of the land have increased 8 per cent., while those who are cultivators but only tenants, and not owners, have diminished 8 per cent.

APPENDIX III.

Feb., 1881.

DIFFERENT MODES OF LAND TENURE.

THE *Métayer* system, under which the farmer holds the land on condition of giving the proprietor one half of the produce, existed in Belgium during the Middle Ages, at a time when what was due was paid wholly in kind. However, holding under lease appears to have been more usual, and a part was paid in money. From the sixteenth century the payment was principally made in money. Now the *Métayer* system is but very rarely found, and that only in the Ardennes district and that of the polders (land reclaimed from the sea) of Holland and Flanders.

The length of lease varies very much. The term of three, six, or nine years, corresponding to the ancient triennial rotation of crops, is most frequently in use : it rarely exceeds twelve years. The yearly lease, which the English call "*tenancy at will*," is also customary where the land is let in very small portions.

The following résumé is taken from the official statements of 1856. It gives an account of the conditions under which farms are let in different provinces :—

CUSTOMS FOLLOWED IN THE TAKING OF FARMS.

Province of Antwerp.—The greater part of the leases date from the 15th of March. The farmer who is quitting gives up to his successor a third of the land capable of cultivation, and himself enjoys the remaining two thirds, until the harvest, without paying any rent. As a general rule, no rights on account of manure or improvements exist ; sometimes, however, as an exceptional case, the farmer who is quitting gives up to the new occupier the manure and straw available at the time of giving up the farm. In certain localities experts are called in to value the standing crops and the manure already in the ground (*engrais enfouis*) if there be any. The incoming tenant makes good the value of them to his predecessor, the whole matter being carried out without intervention on the part of the landlord.

When the leases date from Christmas, the farmer who is quitting has the right of sowing two-thirds of the arable land ; he disposes of his crop just as he pleases.

Brabant.—The relations which exist between the incoming tenant and his predecessor depend on the conditions of the letting. Thus, in some localities the farmers have no right, when quitting, to any indemnity for the improvements which they have made in the farm ; others, on the contrary, have the right to indemnification for manures, seed sown, and the costs of labour. Sometimes the farmer who is quitting enjoys the half of the harvest on condition that he manures, works, and sows the land during the last year of his lease. His successor enjoys the other half ; plants potatoes, sows oats, harvests the hay, and pays the rent-charge (*bail*) as well as the taxes (*contributions*).

In the sixth district the incoming tenant pays nothing for the manure used on the land he is about to farm ; in consequence, he has no right to any indemnity on this account when he quits. This custom results in such impoverishment of the land, that at least two or three years are needed to put it again into a good state after passing from one tenant to another—this is a very serious drawback.

Western Flanders.—In a portion of the province the out-going tenant must leave the straw and manure to his successor, who takes them on the valuation of experts. He pays besides an indemnity for (*les arrière-engrais*) unexhausted manure. This indemnity varies according to the locality and the nature of the manure which has been used, although, in general, no unexhausted manure (*arrière-engrais*) exists after two consecutive harvests. However, the cakes (*tourteaux*) employed as manure for growing tobacco are valued, after the harvest, at one-eighth or tenth of their primitive value ; guano at a third of its value, after a summer harvest, and at a fourth, after a winter harvest.

Lime is considered an improvement to the soil, the effect of which is felt for five successive years. It is valued after the first year at $\frac{1}{11}$ of its primitive value. It passes successively to $\frac{1}{21}$, $\frac{1}{31}$, $\frac{1}{41}$, and $\frac{1}{51}$ of this same value after the second, third, fourth, and fifth harvests.

Thatched roofs are usually debited to the farmer, so that, when entering on his farm, he has to pay more or less for them to his predecessor according to an estimate made after hearing both parties (*d'après estimation contradictoire*), usually determined by public notaries.*

There are localities in which the out-going tenant must, during the last year of his lease, allow clover (*trèfles*) to be sown by the new tenant and provide lodging for his labourers and stabling for his horses. Sometimes the out-going tenant is obliged to abandon to his successor all the manure on the farm—this is regulated by an indemnity fixed by experts.

In the district of Furnes-Ambacht there is no indemnity whatever given on this account.

In the eighth district the out-going tenant sells all that he is able to carry away. An estimate is made of the standing crops, either by the parties themselves, or in presence of a notary.

In the ninth district the fact of a farmer quitting gives rise, as a rule, to an estimate being made of the manure and the unexhausted manure (*arrière-engrais*), in conformity with the rules of the ancient *châtellenie* of Courtrai, dated the 5th July, 1703, and the 17th October, 1671. These regulations are modified by circumstances and custom. The chief modifications are drawn up in a convention of the Chamber of Notaries of the district (*arrondissement*) of Courtrai, dated 4th May, 1853.

In the tenth, eleventh, and twelfth districts a report, drawn up after cross-examination of experts (*une expertise contradictoire*) regulates the estimate made of lands, woods and manure. The in-coming tenant pays his predecessor for them. The following customs also obtain:—The out-going farmer has the manure and crops valued which his successor desires to take. This latter has the power of accepting the estimate at the winter price up to the middle of March, and at the full price up to midsummer, except in two cases—first, if the whole rent of the current year be paid, or if the farm be not entered upon until the 1st of September. In that case the farmer pays two-thirds of the lease of the current year.

Eastern Flanders.—In this province there exists a regulation dated the 17th October, 1671, touching the rights of out-going tenants. This regulation—whose rules constitute the written customs of the ancient *châtellenie* of Ghent—is still in force in a great part of the province. But it is easy to see that the greater part of these rules are no longer in harmony with the laws which now regulate property, nor with the present condition of agricultural industry. There is, in consequence, a demand for a revision of this state of things in Eastern Flanders. Here, however, are the customs most commonly observed when land under cultivation passes from one farmer to another.

The out-going farmer does all the autumn sowing, for which he receives from his successor an indemnity according to the estimate made

* The indemnity due to the farmer who is leaving for unexhausted manures and for land sown with wheat (*emblavures*) is sometimes very high when it is a question of harvests sown but not yet reaped (*récoltes en terre*). In an essay specially for the use of experts charged with estimating these indemnities, I find different valuations for barley, colza, and wheat already sown (*froment en terre*), which rise to 400 and 500 francs the hectare (over two acres), three hundred francs of which are for manures and unexhausted manures,

by experts; if, however, there remain any arrears of rent this indemnity serves to acquit them. The out-going farmer has a right to the (*bois taillis*) copse or underwood which grows on the borders of the fields; these woods are valued by measurement of a given kind when they have attained six years' growth. If they are over that age the out-going farmer has a right to cut them down and sell them, unless his lease forbids it.

These conditions fulfilled, the new farmer enters on the land about the middle of March, and takes possession of the buildings at the commencement of April.

In the fifth district the out-going farmer is indemnified by his successor for the manures, the tillage, and the seed of which he has borne the expense.

Hainault.—As a general rule the out-going farmer leaves to his successor the straw, as well as the manure, and allows him to sow clover as a part of his harvest. Ordinarily the two parties agree upon the regulation of the indemnity which the new farmer has to pay to the one whom he replaces. Sometimes it is stipulated in the lease that the farmer, at the time of quitting, shall not be able to sell his standing crops, that they must be threshed on the farm itself, where he must leave the straw and manure.

In some places the in-coming farmer must find ready to hand lodging for his labourers, stabling for his cattle, straw for the farm, and a certain amount of fallow land.

It is customary to allow the successor to sow clover in part of the land sown with wheat (*emblavures*) in the winter and in March, as well as to cultivate after the carrying of the first crop of the last year. Clover is fallow.

Province of Liège.—The leases usually date from the 15th of March to the 15th of May. In the first case the farmer has a right, at the time of quitting, to the winter crops; in the second case he adds the spring crops to them.

This practice is only found in the district of Liège. Sometimes it happens that the out-going farmer sows the winter corn-crops, of which he gets only the half of the produce in grain the year of his leaving, the other half, as well as the straw, remaining on the farm. The mowing and harvesting are done at the expense of his successor; the threshing is divided between them.

In a part of the Condroz the out-going farmer does the first part of the dressing (*labour*), carries the manure and sows the clover in the corn-land. The new tenant pays for the sowing. He is, besides, obliged to gather in and to carry the grain, for which his predecessor has to pay two-thirds of the rent-charge (*fermage*).

When the out-going farmer has to quit on the 15th of May, he has the disposal of the manure up to the 1st of November. He sows the spring wheat, the harvest from which, like that of the winter grains, is done on his own account. The in-coming farmer does the carting; he also sows the clover in the wheat-land, the harvest of which belongs to his predecessor, and he plants potatoes.

In the Herve country the out-going farmer has generally no right to any abatement (*remise*), whatever may be the funds he has advanced, or the improvements he may have made. In certain localities he has a right to the winter grains (*aux durs grains*); but the straw must be used on the farm, and the manure must remain for the in-coming tenant.

Finally, in the canton of Spa the out-going farmer leaves to his successor all the fodder (*fourrages*) which there is at the time of his leaving, or a certain quantity named in the lease, besides all the manure on the farm. He must also cultivate and sow, with winter grains, an extent of ground equal to that which he found when he took possession of the farm. Some cases also exist in which the out-going farmer who has found nothing sown when he took possession, must leave at the disposal of his successor the lands destined to be sown with winter grains (*grains d'hiver*).

Limburg.—Most of the leases date from the 15th of March as regards farm buildings and meadows; and from the 15th of August as regards the land. It is usually stipulated that the farmer should have the benefit, either when he takes or when he gives up possession, of the winter crops sown, which generally form two-thirds of the harvest.

There are leases under which the in-coming farmer has the benefit of one-half of the winter grains he finds sown, and which, when he quits, he must leave to his successor; but in each case the straw and the manure must be left on the farm.

In certain places the new farmer reaps the harvest; the threshing is done at the joint expense of the in-coming and out-going farmer, and a division of the produce is made according to a proportion named in the lease.

Sometimes the out-going farmer is under no obligation as regards the in-coming one; nor is he obliged to leave either straw or seed-plot (*semis*) of any kind; in consequence the land is often completely worked out.

Finally, in the 11th agricultural district the out-going farmer carries off all, except the manure and the straw. He must besides leave in fallow, for the benefit of his successor, a certain number of hectares, determined by the size of the farm.

Luxembourg.—In the district of Arlon the out-going farmer leaves his successor the straw, fodder and manures. The green fodder forms an exception to this rule.

In the lime-stone region, bounded by the provinces of Namur and Liège, the out-going farmer has the benefit of the fallows and the natural and the artificial meadows. He must, however, reimburse his predecessor for the values of the sowings in the artificial meadows. He profits by all the manures from the 1st of May to the 3rd of November, as well as by the straw and fodder which are to be found on the farm up to the 1st of May. His predecessor cannot carry off anything.

In the localities where sheep are fattened, the out-going farmer has the right of keeping his flock from the 1st of May—the day of his leaving—to the 1st of November, whilst the breeding flocks (*troupeaux d'éleve*) must quit the farm when the lease expires.

In the country of the Ardennes (*partie ardennaise*) properly so-called, which comprises the 7th, 8th, 9th, 10th, 12th, 13th, and 14th agricultural districts, it is generally the custom for the out-going farmer to sow the winter and the spring crops, to harvest and to thresh them. The grain belongs to him, the straw to his successor. He is not allowed to carry off any kind of fodder or root. No indemnity is allowed him for any improvements he has made.

The in-coming farmer has a right to all the products of the farm from the date of the autumn sowing, and his predecessor is obliged to deliver up to him a sufficient quantity of land for the planting of potatoes. Generally

he finds on taking possession a certain quantity of fodder or straw which he engages to leave when he quits.

In the canton of Wellin the out-going farmer has the benefit of his harvests, cattle, and farm implements. The in-coming farmer is bound to wait a year and even eighteen months before getting any produce or revenue except hay and pasturage.

Province of Namur.—The leases usually date from the 1st to the 15th May in the northern portion of the province. The out-going farmer cannot dispose of the manure after the 1st of November of the year preceding his departure. He must sow for his successor any extent of spring crops (*marsages*) provided for in the lease, being, however, reimbursed for his expenditure.

The new tenant must help forward (*faciliter*) the wheat harvest which belongs to his predecessor, by putting at his disposal the necessary buildings for storing and threshing the grain. The straw remains on the farm.

In the seventh and eighth districts the in-coming farmer is obliged to gather in, for the man whose place he takes, the standing crops, and also to leave for his use, during one year, the granaries of the farm.

In the canton of Beauraing the out-going farmer leaves on the farm the manure made since the 1st of November. He also leaves the fodder and the straw of the winter crops, taking for himself the grain as well as that of the spring crops (*marsages*) which he sows before leaving, the straw of which belongs to the in-coming farmer. The latter gathers in the natural and artificial fodder—if the out-going farmer has sown them.

In the *Entre-Sambre-et-Meuse* district the in-coming tenant takes possession of the meadows and the cultivated land, as well as the straw of the last harvest and all the manure made since the 1st November of the preceding year. Sometimes his predecessor reserves to himself all the farm instruments (*molulier*), as well as the wheat harvests of the autumn and of the month of March.

In certain localities the out-going farmer leaves the straw and the manures to his successor, and has the benefit of the winter and March crops (*grains*). The in-coming farmer takes possession of the buildings. He has the benefit of the hay and the fodder, but must re-pay the expenses of sowing. He is obliged besides to do all the carrying necessary for the harvest work.

From what precedes, it results that the relations between the out-going and in-coming farmers are very complicated and often difficult. As no law regulates this matter, one can only be guided by local usages and customs, frequently very antiquated. In a great number of cases agricultural progress suffers from this state of things, but it would be easy to apply a remedy by general measures. The Superior Council of Agriculture, when consulted on the expediency of a reform in this matter, confined itself to recommending measures of instruction and persuasion, so as to enlighten the different populations in the exercise of their relative rights touching the improvement and cultivation of their property.

IX.

FARM LAND AND LAND-LAWS OF THE
UNITED STATES.

BY THE LATE C. M. FISHER,

Counsellor-at-Law, United States.

INTRODUCTION.

THIS Essay is intended to convey some general idea of the actual distribution of land in the United States ; the proportion of landowners to population ; the laws which relate to land as to facilities of transfer, descent, &c. ; as well as some information as to the fitness of the Irish emigrant for becoming the owner and cultivator of land.

In a country so vast as the United States, there must necessarily be few individuals whose opportunities for observation can be sufficiently extensive to enable them to speak positively upon all the foregoing points, as relating to the country at large. It will also be seen that in America the enormous amount of lands eminently suited for agriculture must necessarily influence the operation and working of the laws affecting land ; and to the former fact, perhaps, more than to the laws, must be attributed the great prosperity of the country which, to the man of observation, must be apparent in the driving of the ploughshare over wide fields between the two great oceans of this half-continent, and from the inland seas of the north to the tropics ; in establishing, according to the census of 1860, above 2,440,000 farms, and in creating cities rivalling some of the proud capitals of Europe which had been founded a thousand years ago. These, with towns and villages, numbered at the above date, 28,000, and contained at

that time a fraction less than 5,000,000 of houses ; pointing, in a significant way, to the industry of our population.

THE LANDS OF THE UNITED STATES.

THE agricultural area of the United States, by the last census, in 1860, embraced 163,110,720 acres of improved land, and 244,101,818 acres of land unimproved. In other words, for every two acres of improved land there were, at the period in question, three acres of land connected therewith not under cultivation ; while the gross aggregate of uncultivated territory, fertile and waste, swells to 1,466,969,862 acres.

This fact determines the agriculture of the country. Land is abundant and cheap, while labour is scarce and dear. Even in the older-settled States there is much land that can be purchased at extremely low rates ; and by a recent Act of Congress, known as the Free Homestead Law, every citizen of the United States, or any foreigner who shall declare his intention of becoming a citizen, can have a farm of 160 acres without charge. As good land as any in the world is offered to actual settlers on these easy terms.

Under such circumstances it is evident that the high-farming system of agriculture which is practised in some older and more densely-populated countries, where labour is abundant and the land mostly under cultivation, cannot, as a general rule, be profitably adopted at present in this new country. It has been said that American agriculture is half a century behind that of Great Britain. In one sense this is perhaps true. Our land is not as thoroughly under-drained, manured, and cultivated as that of England, Scotland, or Belgium ; but we can, and do now, produce a bushel of wheat at much less cost than the most scientific farmer of England can by the best approved method of cultivation, *even if he paid nothing for the use of his land.*

The following table exhibits the amount of improved, unimproved, and cash value of farm-lands, the aggregate population, and the number of farmers and farm-labourers in each State, as collected from all the official records of most recent date procurable.

The total population is, I believe, now estimated to be upwards of 40,000,000, and at the period when the next census will be taken, 1870, next year, the expectation is that the population will be found to number even 42,500,000.

TABLE.

NAME OF STATE	Amount of improved lands in 1860	Lands unimproved.	Cash Value.	Aggregate Population.	Number of Farmers	Number of Farm Labourers.
	Acres.	Acres.	\$

The laws of the United States and the various States of the United States do not differ very materially as to the method of conveying real estate.

Many of the States have by special legislation defined certain words, so as to simplify the mode or form of making deeds of conveyance, and perhaps it will not be out of place to recite at length the usual form of such a deed.

"THIS DEED, made the _____ day of _____, in the year _____, Between (here insert the names of the parties) witnesseth : that in consideration of (here state the consideration) the said _____ doth (or do) grant unto the said _____ All &c. (here describe the property, and insert covenants or any other provisions.)

"Witness the following signature and seal (or signatures and seals)."

By the same legislation it is provided as follows :—

Every such deed, conveying lands, shall, unless an exception be made therein, be construed to include all the estate, right, title, or interest whatever, both at law and in equity, of the grantor in or to such lands.

Whenever, in any deed, there shall be used the words, "The said grantor (or the said _____) releases to the said grantee (or the said _____) All his claims upon the said lands," such deed shall be construed as if it set forth that the grantor hath remised, released, and for ever quitted claim, and by these presents doth remise, release, and for ever quit claim unto the grantee, his heirs and assigns, all right, title, and interest whatsoever, both at law and in equity, in or to the lands and premises granted, or intended so to be, so that neither he nor his personal representative, his heirs or assigns, shall at any time hereafter have, claim, challenge, or demand the said lands and premises, or any part thereof, in any manner whatever.

A Deed of Lease may be made in the following form, or to the same effect.

"THIS DEED, made the _____ day of _____ in the _____ year _____ Between (here insert the names of parties) Witnesseth; that the said _____ doth demise unto the said _____ his personal representatives and assigns, all &c. (here describe the property) from the _____ day of _____ for the term of _____ thence ensuing, yielding therefore during the said term the rent of (here state the rent and mode of payment).

"Witness the following signature and seal."

When a deed uses the words, "the said covenants," such

covenant shall have the same effect as if it was expressed to be by the covenanter, for himself, his heirs, personal representatives, and assigns, and shall be deemed to be with the covenantee, his heirs, personal representatives, and assigns.

A covenant by the grantor in a deed, "that he will warrant generally the property hereby conveyed," shall have the same effect as if the grantor had covenanted that he, his heirs, and personal representatives will for ever warrant and defend the said property unto the grantee, his heirs, personal representatives, and assigns, against the claims and demands of all persons whomsoever.

A covenant by any such grantor, "that he will warrant specially the property hereby conveyed," shall have the same effect as if the grantor had covenanted that he, his heirs, and personal representatives will for ever warrant and defend the said property unto the grantee, his heirs, personal representatives, and assigns, against the claims and demands of the grantor, and all persons claiming or to claim by, through, or under him.

The words "with general warranty," in the granting part of any deed, shall be deemed to be a covenant by the grantor "that he will warrant generally the property hereby conveyed." The words "with special warranty," in the granting part of any deed, shall be deemed to be a covenant by the grantor "that he will warrant specially the property hereby conveyed."

A covenant by the grantor in a deed for land "that he has the right to convey the said land to the grantee," shall have the same effect as if the grantor had covenanted that he had good right, full power, and absolute authority to convey the said land, with all the buildings thereon and the privileges and appurtenances thereto belonging, unto the grantee, in the manner in which the same is conveyed, or intended so to be by the deed, and according to its true intent.

A covenant by any such grantor "that the grantee shall have quiet possession of the said land," shall have as much effect as if he covenanted that the grantee, his heirs, and assigns might, at any and all times thereafter, peaceably and quietly enter upon and have, hold and enjoy the land conveyed by the deed, or intended so to be, with all the buildings thereon, and the privileges and appurtenances thereto belonging, and receive and take the rents and profits thereof, to and for his and their use and benefit, without any eviction,

interruption, suit, claim, or demand whatever. If to such covenant there be added "free from all incumbrances," these words shall have as much effect as the words "and that freely and absolutely acquitted, exonerated, and for ever discharged, or otherwise by the said grantor or his heirs, saved harmless and indemnified, of, from, and against any and every charge and incumbrance whatever."

A covenant by any such grantor "that he will execute such further assurances of the said lands as may be requisite," shall have the same effect as if he covenanted that he, the said grantor, his heirs, or personal representatives, will at any time, upon any reasonable request, at the charge of the grantee, his heirs, or assigns, do, execute, or cause to be done or executed, all such further acts, deeds, and things for the better, more perfectly, and absolutely conveying and assuring the said lands and premises hereby conveyed, or intended so to be, unto the grantee, his heirs, and assigns, as his or their counsel shall be reasonably devised, advised, or required.

A covenant by any such grantor "that he has done no act to incumber the said lands," shall have the same effect as if he covenanted that he had not done or executed, or knowingly suffered any act, deed, or thing whereby the lands and premises conveyed, or intended so to be, or any part thereof, are, or will be charged, affected, or incumbered in title, estate, or otherwise.

In a Deed of Lease, a covenant by the lessee "to pay the rent," shall have the effect of a covenant that the rent reserved by the deed shall be paid to the lessor, or those entitled under him, in the manner therein mentioned: and a covenant by him "to pay the taxes," shall have the effect of a covenant that all taxes, levies, and assessments upon the demised premises, or upon the lessor on account thereof, shall be paid by the lessee, or those claiming under him.

In a Deed of Lease, a covenant by the lessee that "he will not assign without leave," shall have the same effect as a covenant that the lessee will not, during the term, assign, transfer, or set over the premises, or any part thereof, to any person, without the consent in writing of the lessor, his representatives, or assigns: and a covenant by him that "he will leave the premises in good repair," shall have the same effect as a covenant that the demised premises will, at the expiration, or other sooner determination of the term, be peaceably

surrendered and yielded up unto the lessor, his representatives, or assigns, in good and substantial repair and condition, reasonable wear and tear excepted.

No covenant or promise by a lessee that he will leave the premises in good repair, shall have the effect if the buildings are destroyed by fire or otherwise, without fault or negligence on his part, or of binding him to erect such buildings again, unless there be other words, showing it to be the intent of the parties that he should be so bound.

A covenant by a lessor "for the lessee's quiet enjoyment of his term," shall have the same effect as a covenant that the lessee, his personal representatives, and lawful assigns paying the rent reserved, and performing his or their covenants, shall peaceably possess and enjoy the demised premises for the term granted, without any interruption or disturbance from any person whatever.

And if in a Deed of Lease it be provided that "the lessor may re-enter for default of _____ days in the payment of rent, or for the breach of covenants," it shall have the effect of an agreement that if the rent reserved, or any part thereof, be unpaid for such number of days after the day on which it ought to have been paid, or if any of the other covenants on the part of the lessee, his personal representative, or assigns, be broken, then, in either of such cases, the lessor, or those entitled in his place at any time afterwards, into and upon the demised premises, or any part thereof, in the name of the whole, may re-enter, and the same again have, re-possess, and enjoy, as of his or their former estate.

All deeds are valid between the parties, whether recorded or not, but void as to creditors and other purchasers, unless recorded in the town, county, or district in which the land intended to be conveyed may be situated.

The records touching a lot or parcel of land, exhibited by the books of the registry office where situated, and of which authenticated certificates are readily procurable for a small fee, are always held to be good evidence of ownership, even in the absence of the Deeds of Conveyance themselves.

The ordinary fee charged for preparing simple leases or deeds is from one to two dollars (say from 4s. to 8s.), and fifty cents (or 2s.) or recording a deed.

The laws governing the distribution of land belonging to the estates of intestates are not exactly the same in each State,

yet, upon examination of the laws of the various States, it will be found that there is but slight difference, and the distribution or division of such estates is made between and among the children, both male and female, in equal proportions, and the representatives of a deceased child—such representatives of a deceased child taking only such proportion as the parent would have taken if living. And when the estate is inconsiderable, or when it cannot be divided without great injury, that is to say, when partition would materially lessen its value, the Court having jurisdiction may decree the whole or any part of the land to one of the heirs, who would be called upon to pay such sum of money to the others as Commissioners appointed by the Court should deem to be just and fair. When it is considered advisable that the land be so decreed to any one of the heirs, the eldest male is to be preferred to the others, and the males to the females. I believe this to be a wise discretion, which is possessed by the various Probate Courts; and it is generally a matter of agreement among all interested in the estate—which of the heirs shall take the land, and how much money the heir so taking shall pay to the others for their shares.

The widow, if any, is entitled to the use of one-third of all the real estate during her lifetime, which may be set out or apportioned to her by Commissioners whom the Court appoint for that purpose. She is also entitled to such proportion of the personal estate as the Court may assign to her, for her own absolute use; and this assignment is not to be less than one-third of the value of all that may remain, after the payment of the debts of the intestate.

This method of distributing estates tends to prevent large holdings, as at the death of any large holder his estate would, in almost all instances, be divided amongst those who might come after him; and, in cases of small farms, by the provisions of the law already referred to, injurious subdivisions are avoided. Again, although all the children of a landholder would share in the division of the estate, yet if the old homestead were insufficient to provide each with a farm, those who might receive their share in money would have the wherewithal to assist them to acquire new lands in the great West, or in other ways to make homes for themselves.

In Virginia, and in other parts of the South, very large grants of land were made before the organisation of the United

States, and at a time when lands were of inconsiderable value, which grants have been farmed as plantations, and with slave labour. Before the late war, although the children of an intestate shared equally in the distribution of such an estate, yet it was customary for some of them, by purchase, to become the owner of the whole estate, or else it was sold in block to any purchaser who might be found, and the proceeds equally divided.

With slave labour, such products as cotton, tobacco, rice, &c., could only be grown with advantage upon large plantations; and the Southern States, with these large holdings, and only slave labour for their cultivation, although more favoured by nature, have, it appears to my mind, not made the rapid progress of the Western and Middle States, with their smaller holdings of land. Since the abolition of slavery and the substitution of free and skilled white labour, I incline to the opinion that smaller holdings will hereafter be found the rule in the south, and in fact I am aware that many large plantations have recently been parcelled into several farms with a view to their being worked in accordance with the altered circumstances of the South.

Foreigners may buy and hold land in the United States, upon being naturalised (or upon filing, in the office of the clerk of the proper Court, a declaration of intention of becoming naturalised), the same as a native-born citizen; and in some few States, such as Georgia, Wisconsin, &c., aliens may hold land.

Of the emigrant settlers, those from Ireland, in many instances, make good and thrifty farmers, and acquire considerable property; but still a large proportion of the Irish are always to be found among the labouring population. Their qualifications for making good settlers are not so rare as might be generally supposed by an eye-witness of the agricultural performances of many small Irish tenant-farmers in their native land.

In America, industry and hard work, when directed to the cultivation of land, offer greater rewards than in Ireland; and this fact appears to have a marked effect upon many an Irish emigrant. Again, a description of husbandry which an English well-to-do farmer might consider slovenly, is, perhaps, as well calculated to make profit out of a newly-cleared farm as a more careful system would be; and so even a comparatively ignorant

man may, by turning his attention to farming, surely reap a good return, and ultimate independence, provided he devote himself with diligence to the work. And with such examples before him the newly-arrived emigrant is constantly stimulated to exertion in a similar direction. I could point to many instances in the State of Vermont, and in others, where a comparatively ignorant and penniless Irish emigrant had, almost immediately after arrival, arranged for the purchase, on time, of a lot of land; then worked as a labourer until he had got together a few dollars to purchase implements, seed, and a little food, the latter in the shape of a barrel of flour, some salt pork, tea, &c., forming sufficient for one season, and who had, without any other aid, managed to struggle on until a succession of harvests found him a rich man in comparison with his former condition. The feeling of "becoming one's own landlord," of "owning the fee-simple of land," is one that has been spoken of, in my hearing, by this class of persons, and appears to me to be calculated to afford, and does afford, great individual gratification, and must at the same time act as a strong incentive to exertion in the right direction; and I would say, further, that I believe it to be the first great ambition of every Irish emigrant to become the owner of real estate. Even many who continue to work as labourers for years after their arrival in the country will constantly speak of a time when they hope to have a farm of their own—a hope which, it may be, from the cultivation of habits which debar the accumulation of capital sufficient, or from other causes, they are delayed or prevented from realizing; and then, after time elapses, perhaps, influenced by a feeling of contentment with the present, they may, and, I regret to say, occasionally do, augment that no inconsiderable class called "loafers," who live a hand-to-mouth sort of existence.

In the Eastern and Middle States the farms are not large. The average I believe to consist of from fifty to two hundred acres of land, and many of even less extent.

Land in most States is valued by properly-appointed assessors once in five years, for the purposes of taxation; and before the late war the tax upon land was light, being raised for local and school purposes only. Even now I believe it is not more than one per cent. upon the appraised value of land.

The following extracts from the statutes of some of the various States, in regard to descent and distribution of land,

may be taken as a sample of the statutes of the others upon the same subjects.

EXTRACT FROM GENERAL LAWS, UNITED STATES.

Ordinance of Congress (sitting under the Articles of Confederation) for the Government of the Territory of the United States north-west of the River Ohio, passed 13 July, 1787.

1. Be it ordained by the United States in Congress assembled, That, &c.

2. Be it ordained by the authority aforesaid, That the estates both or resident and non-resident proprietors in the said territory, dying intestate, shall descend to, and be distributed among their children, and the descendants of a deceased child in equal parts, the descendants of a deceased child or grandchild to take the share of their deceased parent in equal parts among them; and where there shall be no children or descendants, then in equal parts to the next of kin, in equal degree; and among collaterals, the children of a deceased brother or sister of the intestate shall have, in equal parts among them, their deceased parent's share; and there shall in no case be a distinction between kindred of the whole and half blood; saving in all cases to the widow of the intestate her third part of the real estate for life.

STATE OF MASSACHUSETTS.

Extract from Laws relating to Descent and Distribution of Real Estate. Chap. 91.

Section 1.—When a person dies seised of land, tenements, or hereditaments, or of any right thereto, or entitled to any interest therein, in fee simple or for the life of another, not having lawfully devised the same, they shall descend, subject to his debts (except as provided in chapter one hundred and four), in manner following:

First.—In equal shares to his children and the issue of any deceased child by right of representation; and if there is no child of the intestate living at his death, then to all his other lineal descendants; if all the descendants are in the same degree of kindred to the intestate, they shall share the estate equally; otherwise they shall take according to the right of representation.

Second.—If he leaves no issue, then to his father.

Third.—If he leaves no issue nor father, then in equal shares to his mother, brothers, and sisters, and to the children of any deceased brother or sister by right of representation.

Fourth.—If he leaves no issue, nor father, and no brother nor sister, living at his death, then to his mother to the exclusion of the issue, if any, of deceased brothers or sisters.

Fifth.—If he leaves no issue, and no father, mother, brother, nor sister, then to his next of kin in equal degree; except that when there are two or more collateral kindred in equal degree, but claiming through different ancestors, those who claim through the nearest ancestors shall be preferred to those claiming through an ancestor who is more remote.

Provided,

Sixth.—If a person dies leaving several children, or leaving one child and the issue of one or more others, and any such surviving child dies under age and not having been married, all the estate that came to the deceased child by inheritance from such deceased parent shall descend in equal shares to the other children of the same parent, and to the issue of any such other children who have died, by right of representation.

Seventh.—If at the death of such child who shall have died under age and not having been married, all the other children of his said parent are also dead, and any of them have left issue, the estate that came to such child by inheritance from his said parent shall descend to all the issue of the other children of the same parent; and if all the issue are in the same degree of kindred to the child, they shall share the estate equally; otherwise they shall take according to the right of representation.

Eighth.—If the intestate leaves a widow and no kindred, his estate shall descend to his widow; and if the intestate is a married woman and leaves no kindred, her estate shall descend to her husband.

Ninth.—If the intestate leaves no kindred, and no widow or husband, his or her estate shall escheat to the Commonwealth.

Section 2.—An illegitimate child shall be heir of his mother and any maternal ancestor, and the lawful issue of an illegitimate person shall represent such person and take by descent any estate which the parent would have taken if living.

Section 3.—If an illegitimate child dies intestate, without lawful issue, his estate shall descend to his mother.

Section 4.—An illegitimate child whose parents have intermarried, and whose father has acknowledged him as his child, shall be considered legitimate.

Section 5.—The degrees of kindred shall be computed according to the rules of the civil law; and the kindred of the half blood shall inherit equally with those of the whole blood in the same degree.

Section 6.—Any estate, real or personal, given by the intestate in his lifetime as an advancement to any child or other lineal descendant, shall be considered as part of the intestate's estate, so far as it regards the division and distribution thereof among his issue, and shall be taken by such child or other descendant towards his share of the intestate's estate; but he shall not be required to refund any part thereof, although it exceeds his share.

Section 7.—If such advancement is made in real estate, the value thereof shall be considered as part of the real estate to be divided; if it is in personal estate it shall be considered as part of the personal estate; and if in either case it exceeds the share of real or personal estate respectively that would have come to the heir so advanced, he shall not refund any part of it, but shall receive so much less out of the other part of the estate as will make his whole share equal to those of the other heirs who are in the same degree with him.

Section 8.—All gifts and grants shall be deemed to have been made in advancement, if they are expressed in the gift or grant to be so made, or if charged in writing by the intestate as an advancement, or acknowledged in writing as such by the child or other descendant.

Section 9.—If the value of the estate so advanced is expressed in the conveyance, or in the charge thereof made by the intestate, or in the

acknowledgment by the party receiving it, it shall be considered as of that value in the division and distribution of the estate; otherwise it shall be estimated according to its value when given.

Section 10.—If a child or other lineal descendant so advanced dies before the intestate, leaving issue, the advancement shall be taken into consideration in the division and distribution of the estate; and the amount thereof shall be allowed accordingly by the representatives of the heir so advanced, as so much received towards their share of the estate, in like manner as if the advancement had been made directly to them.

Section 11.—Nothing contained in this Chapter shall affect the title of a husband as tenant by the courtesy, nor that of a widow as tenant in dower, nor her right to any part of the real estate of her husband given to her by law in lieu of dower.

Section 12.—Inheritance or succession, “by right of representation,” takes place when the descendants of a deceased heir take the same share or right in the estate of another person that their parent would have taken if living. Posthumous children are considered as living at the death of their parent.

MASSACHUSETTS.

Homestead Law.—Chap. 104.

Section 1.—Every householder having a family shall be entitled to an estate of homestead, to the extent in value of eight hundred dollars, in the farm or lot of land and buildings thereon owned, or rightly possessed by lease, or otherwise, and occupied by him as a residence; and such homestead and all right and title therein shall be exempt from attachment, levy, or execution, sale for the payment of his debts, or other purposes, and from the law of conveyance, descent, and devise, except as hereinafter provided.

Section 2.—To constitute such estate of homestead and to entitle property to such exemption, it shall be set forth in the deed of conveyance by which the property is acquired, that it is designed to be held as a homestead; or after the title has been acquired, such design shall be declared by writing, duly signed, sealed, acknowledged, and recorded, in the registry of deeds for the county or district where the property is situated. But the acquisition of a new estate of homestead in either of said modes shall operate to defeat and discharge any estate or right of homestead previously existing.

PENNSYLVANIA.

Law regulating Descent and Distribution of Real Estate.

The real and personal estate of a decedent, whether male or female, remaining after payment of all just debts and legal charges, which shall not have been sold or disposed of, by will, or otherwise limited by marriage settlement, shall be divided and enjoyed as follows, viz.:—

Where such intestate shall leave a widow and issue, the widow shall be entitled to one-third of the real estate for the term of her life, and to one-third of the personal estate absolutely.

Where such intestate shall leave a widow and collateral heirs, or other kindred, but no issue, the widow shall be entitled to one-half part of the real estate, including the mansion-house and buildings appurtenant thereto, for the term of her life, and to one-half part of the personal estate absolutely.

Where such intestate shall leave a husband, he shall take the whole personal estate, and the real estate shall descend and pass as hereinafter provided, saving to the husband his right as tenant by the courtesy which shall take place, although there be no issue of the marriage, in all cases where the issue, if any, would have inherited.

The real estate of such married woman, upon her decease, shall be distributed as provided for by the intestate laws of this commonwealth now in force. . . . Subject to the estates and interests hereinbefore given to the widow or surviving husband, if any, the real estate of such intestate shall descend to and be distributed among his issue, according to the following rules and order of succession, viz. :—

If such intestate shall leave children, but no other descendant, being the issue of a deceased child, the estate shall descend to, and be distributed among, such children.

If such intestate shall leave grandchildren, but no child or other descendant being the issue of a deceased grandchild, the estate shall descend to, and be distributed among, such grandchildren.

If such intestate shall leave descendants in any other degree of consanguinity to him, the estate shall descend to, and be distributed among, such descendants.

If such intestate shall leave descendants in different degrees of consanguinity to him, the more remote of them being the issue of a deceased child, grandchild, or other descendants, the estate shall descend to and be distributed among them as follows, viz. :—

Each of the children of such intestate shall receive such share as such child would have received, if all the children of the intestate who shall then be dead, leaving issue, had been living at the death of the intestate.

Each of the grandchildren, if there shall be no children, in like manner shall receive such share as he or she would have received if all the other grandchildren who shall then be dead, leaving issue, had been living at the death of the intestate, and so on in like manner to the remotest degree.

In every such case, the issue of such deceased child, grandchild, or other descendant, shall take, by representation of their parents, respectively, such share only as would have descended to such parent, if they had been living at the death of the intestate.

It is the true intent and meaning of this Act, that the heir at common law shall not take in any case, to the exclusion of other heirs and kindred standing in the same degree of consanguinity with him to the intestate; and it is hereby declared, that in every case which may arise, not expressly provided for by this Act, the real as well as the personal estate of an intestate shall pass to and be enjoyed by the next of kin of such intestate, without regard to his ancestor, or other relation, from whom such estate may have come.

WISCONSIN.

Law relating to Descent of Real Estate.—Chap. 92.

Section 1.—When any person shall die, seised of any lands, tenements, or hereditaments, or of any right thereto, or entitled to any interest therein, in fee-simple or for the life of another, not having lawfully devised the same, they shall descend, subject to his debts, in manner following :—

1. In equal shares to his children, and to the lawful issue of any deceased child by right of representation ; and if there be no child of the intestate living at his death, his estate shall descend to all his other lineal descendants ; and if all the said descendants are in the same degree of kindred to the intestate they shall share the estate equally, otherwise they shall take according to the right of representation.

2. If he shall leave no issue, his estate shall descend to his widow during her natural lifetime, and after her decease to his father ; and if he shall leave no issue or widow, his estate shall descend to his father.

3. If he shall leave no issue nor father, his estate shall descend to his widow during her natural life, and after her decease in equal shares to his brothers and sisters, and to the children of any deceased brother or sister, by right of representation : provided, that if he shall leave a mother, she shall take an equal share with his brothers and sisters.

4. If he shall leave no issue, nor widow, nor father, his estate shall descend in equal shares to his brothers and sisters, and to the children of any deceased brother or sister, by right of representation : provided, that if he shall leave a mother also, she shall take an equal share with his brothers and sisters.

5. If the intestate shall leave no issue, nor widow, nor father, and no brother nor sister, living at his death, his estate shall descend to his mother, to the exclusion of the issue, if any, of deceased brothers or sisters.

6. If the intestate shall leave no issue, nor widow, and no father, mother, brother, nor sister, his estate shall descend to his next of kin in equal degree, excepting when there are two or more collateral kindred in equal degree, but claiming through different ancestors, those who claim through the nearest ancestor shall be preferred to those claiming through an ancestor more remote : provided, however :—

7. If any person shall die, leaving several children, or leaving one child, and the issue of one or more other children, and any such surviving child shall die under age, and not having been married, all the estate that came to the deceased child by inheritance from such deceased parent shall descend in equal shares to the other children of the same parent, and to the issue of any such other children who shall have died, by right of representation.

8. If, at the death of such child who shall die under age, and not having been married, all the other children of his said parent shall also be dead, and any of them shall have left issue, the estate that came to said child by inheritance, from his said parent, shall descend to all the issue of other children of the same parent, and if all the said issue are in the same degree of kindred to said child, they shall share the said estate equally ; otherwise, they shall take according to the right of representation.

9. If the intestate shall leave a widow, and no kindred, his estate shall descend to such widow.

STATE OF ILLINOIS.

Extract of Law relating to Descent of Estates.

Section 46.—Estates, both real and personal, of resident or non-resident proprietors in this State, dying intestate, or whose estates, or any part thereof, shall be deemed and taken as intestate estate, and after all just debts and claims against such estates shall be paid as aforesaid, shall descend to, and be distributed to his or her children and their descendants in equal parts; the descendants of a deceased child or grandchild taking the share of their deceased parent in equal parts among them; and when there shall be no children of the intestate, nor descendants of such children, and no widow, then to the parents, brothers, and sisters of the deceased person and their descendants in equal parts among them; allowing to each of the parents, if living, a child's part, or to the survivor of them, if one be dead, a double portion; and if there be no parent living, then to the brothers and sisters of the intestate and their descendants. When there shall be a widow and no child or children or descendants of a child or children of the intestate, then, the one-half of the real estate, and the whole of the personal estate, shall go to such widow, as her exclusive estate for ever; subject to her absolute disposition and control to be governed in all respects by the same rules and regulations as are or may be provided in cases of estates of *femes sole*; if there be no children of the intestate or descendants of such children, and no parents, brothers, or sisters, or descendants of brothers and sisters, and no widow, then such estate shall descend in equal parts to the next of kin to the intestate, in equal degree, computing by the rules of the civil law; and there shall be no representation among collaterals, except with the descendants of the brothers and sisters of the intestate; and in no case shall there be a distinction between the kindred of the whole and the half blood, saving to the widow, in all cases, her dower, as provided by law.

Section 47.—When any *feme covert* shall die intestate, leaving no child or children, or descendants of a child or children, then the one-half of the real estate of the decedent shall descend and go to her husband, as his exclusive estate for ever.

Section 51.—Where any of the children of a person dying intestate, or their issue, shall have received from such intestate in his or her lifetime, any real or personal estate, by way of advancement, and shall desire to come into the partition or distribution of such estate with the other parceners or distributees, such advancement, both of real and personal estate, shall be brought into hotchpot with the whole estate, real and personal, of such intestate; and every person so returning such advancement as aforesaid, shall, thereupon, be entitled to his or her just proportion of said estate.

Section 52.—If any man shall have one or more children by any woman whom he shall afterward marry, such child or children, if acknowledged by the man, shall, in virtue of such marriage and acknowledgment, be thereby legitimated, and capable in law to inherit and transmit inheritance as if born in wedlock.

Section 53.—If any single or unmarried woman, having estate, either real or personal, in her own right, shall hereinafter die leaving one or more children, deemed in law illegitimate, such child or children shall not on that account be disinherited; but they and each of them, and their descendants, shall be deemed able and capable in law to take and inherit the estate of

their deceased mother, in equal parts among them, to the exclusion of all other persons: provided, that if there shall be no such child or children, or their descendants, then and in such case the estate of the intestate shall be governed by the rules of descent, as in other cases where illegitimates are excluded.

Section 54.—In all cases where any person shall die intestate, leaving real or personal estate in this State, and a child or children, commonly called posthumous children, shall be born unto him after his decease, within the usual time prescribed by law, such child or children shall come in for their just proportion of said estate, in all respects as though he, she, or they had been born in the lifetime of the intestate.

Section 128.—Where any heir of an intestate has received money, goods, chattels, or real estate from such intestate, if the amount so received shall be charged to such heir by said intestate, the same shall be taken into computation in making distribution of the estate upon being brought into hotchpot as aforesaid: provided, that an heir who has received from the intestate more than his share shall in no case be required to refund.

STATE OF KANSAS.—Chapter 80.

Extract of Law relating to Descents and Distribution.

Section 5.—One-half in value of all the real estate in which the husband at any time during the marriage had a legal or equitable interest, which has not been sold on execution or other judicial sale, or to which the wife has made no relinquishment of her rights, or which may not be necessary for the payment of the debts of the deceased husband, shall, under the direction of the Court, be set apart by the executor as her property in fee-simple, upon the death of the husband, if she survives him. Continuous cohabitation as husband and wife, is presumptive evidence of marriage for the purpose of giving the right aforesaid.

Section 6.—Such share shall be so set off as to include the ordinary dwelling-house, and the land given by law to the husband as a homestead, or so much thereof as will be equal to the share allotted to her by the last section, unless she prefers a different arrangement. But no different arrangement shall be permitted where it would have the effect of prejudicing the rights of creditors.

Section 7.—The share thus allotted to her may be set off by the mutual consent of all the parties interested, when such consent can be obtained, or it may be set off by referees appointed by the Court.

Section 8.—The application for such admeasurement by referees may be made at any time after twenty days and within ten years after the death of the husband, and must specify the particular tracts of land in which she claims her portion, and ask the appointment of referees.

Section 9.—The Court shall fix the time for making the appointment and direct such notice thereof to be given to all the parties interested therein as it deems proper.

Section 10.—The referees may employ a surveyor, if necessary, and they must cause the widow's share to be marked off by metes and bounds, and make a full report of their proceedings to the Court as early as practicable.

Section 11.—The Court may require a report by such a time as it deems reasonable; and if the referees fail to obey this, or any other order of the Court, it may discharge them, and appoint others in their stead, and may impose on them the payment of all costs previously made, unless they show good cause to the contrary.

Section 12.—The Court may confirm the report of the referees, or it may set it aside, and refer the matter to the same or other referees, at its discretion.

Section 13.—Such confirmation after the lapse of thirty days, unless appealed from according to law, shall be binding and conclusive as to the admeasurement, and she may bring suit to obtain possession of the land thus set apart for her.

Section 14.—Nothing in the last section shall prevent any person interested from controverting the general rights of the widow to the portion thus admeasured.

Section 15.—The widow's portion cannot be affected by any will of her husband if she objects thereto, and relinquishes all rights conferred upon her by the Will.

Section 16.—Subject to the rights and charges hereinbefore contemplated, the remaining estate of which the decedent died seised shall, in the absence of other arrangements by Will, descend in equal shares to his children.

Section 17.—If any one of his children be dead, the heirs of such child shall inherit his share, in accordance with the rules herein prescribed, in the same manner as though such child had outlived his parent.

Section 18.—If the intestate leaves no issue, the whole of his estate shall go to his wife; and if he leaves no wife nor issue, the whole shall go to his father.

Section 19.—If his father be previously dead, the portion which would have fallen to his share by the above rules shall be disposed of in the same manner as though he had outlived the intestate, and died in the possession and ownership of the portion thus falling to his share, and so on through each ascending ancestor and his issue, unless heirs are sooner found.

Section 20.—If heirs are not found in the male line, the portion thus inherited shall go to the mother of the intestate, and to her heirs, following the same rules as above prescribed.

Section 21.—If heirs are not thus found, the portion uninhaired shall go to the wife of the intestate, or to her heirs, if dead, according to like rules; and if he has had more than one wife, who either died or survived in lawful wedlock, it shall be equally divided between the one who is living and the heirs of those who are dead, or between the heirs of all, if all are dead, such heirs taking by right of representation.

Section 22.—If, still, there be property remaining uninhaired, it shall escheat to the territory.

Section 23.—Illegitimate children inherit from the mother, and the mother from the children.

Section 24.—They also inherit from the father whenever they have been recognised by him as his children; but such recognition must have been general and notorious, or else in writing.

Section 25.—Under such circumstances, if the recognition of relationship has been mutual the father may inherit from his illegitimate child.

Section 26.—But in thus inheriting from an illegitimate child, the rule

above established must be inverted so that the mother and her heirs take preference of the father and his heirs, the father having the same right of inheritance in regard to an illegitimate child that the mother has in regard to one that is legitimate.

Section 27.—Property given by an intestate, by way of advancement to an heir, shall be considered part of the estate, so far as regards the division and distribution thereof, and shall be taken by such heir towards his share of the estate, at what it would now be worth if in the condition in which it was so given to him.

Section 28.—But if such advancement exceeds the amount to which he would be entitled, he cannot be required to refund any portion thereof.

Section 29.—All the provisions hereinbefore made, in relation to the widow of a deceased husband, shall be applicable to the husband of a deceased wife. Each is entitled to the same rights or portion in the estate of the other, and like interests shall in the same manner descend to their respective heirs. The estate of dower and by courtesy are hereby abolished.

Section 30.—Children of the half-blood shall inherit equally with children of the whole blood. Children of a deceased parent inherit in equal proportions the portion their father or mother would have inherited, if living.

STATE OF GEORGIA.—Chap. 3. Article 1.

Extract of Laws relating to Inheritable Property and the relative rights of the Heirs and Administrator.

2451. Upon the death of the owner of any estate, in realty or negroes, which estate survives him, the title vests immediately in his heirs-at-law. The title to all other property owned by him vests in the administrator of his estate for the benefit of the heirs and creditors.

2452. The following rules shall determine who are the heirs-at-law of a deceased person:—

1. The husband is sole heir of his intestate wife.
2. If the intestate dies without children, or the descendants of children, leaving a wife, the wife is his sole heir.
3. If there are children, or those representing deceased children, the wife shall have a third part, unless the shares exceed five in number, in which case the wife shall have one-fifth part of the estate. If the wife elects to take her dower, she has no farther interest in the realty.
4. Children stand in the first degree from the intestate, and inherit equally all property of every description, accounting for advancements, as hereinafter explained. Posthumous children stand upon the same footing with children in being upon all questions of inheritance. The lineal descendants of children stand in the place of their deceased parents; and in all cases of inheritance from a lineal ancestor, the distribution is per stirpes and not per capita.
5. Brothers and sisters of the intestate stand in the second degree, and inherit, if there is no widow, or child, or representative of child. The half-blood on the paternal side inherit equally with the whole blood. If there is no brother or sister of the whole or half-blood on the paternal side, then those of the half-blood on the maternal side shall inherit. The children or

grandchildren of brothers and sisters deceased shall represent and stand in the place of their deceased parents, but there shall be no representation farther than this among collaterals.

6. The father, if living, inherits equally with brothers and sisters, and stands in the same degree. If there be no father, and the mother is alive, and a widow, she shall inherit in the same manner as the father would. If the mother is not a widow, she shall not be entitled to any portion of such estate, unless it shall be that of the only or last surviving child of the mother, in which event she shall take as if married.

7. In all degrees more remote than the foregoing, the paternal and maternal next of kin shall stand on an equal footing.

8. First cousins stand next in degree; uncles and aunts inherit equally with cousins.

9. The more remote degrees shall be determined by the rules of the canon law, as adopted and enforced in the English courts prior to the fourth day of July, A.D. 1776.

2453. Whenever any feme covert, having a child or children by a former marriage, is, or becomes, entitled to property, by inheritance, at any time, or devise, antecedent in date to her last marriage, and not in trust, the possession of which is not obtained prior to such marriage, such property shall not belong to the husband of such feme covert, but shall be equally divided between all the children of such feme covert, living at the time when possession is obtained, and such feme covert. The portions of such feme covert, and her children by her last husband, shall alone be subject to be reduced to possession by, and the title vest in, such husband.

NEW HIGH-CLASS JOURNAL.

LAND

A Journal for all interested in Landed and House Property.

WITH

INDEX TO THE ESTATE EXCHANGE REGISTERS.

EVERY SATURDAY.

Price SIXPENCE.

LAND is a new High-Class Weekly Journal devoted to all matters affecting Landed and House Property. It has been established on comprehensive lines to supply full and accurate information, not only on the narrower technical points, but on the legal, economic, and social features of questions involving interests the money value of which in the United Kingdom is estimated at no less a sum than THREE THOUSAND MILLIONS (£3,000,000,000) STERLING.

LAND will do for the Land Market what financial organs do for the Money Market—scanning, discussing, and forecasting every circumstance or contingency likely to affect the great network of interests connected with Real Estate, so that persons of all classes desiring to realise or invest may have full information as to the state of the Market, and timely notice of every circumstance, social, financial, or political, which may influence their decisions.

Owners, Occupiers, Buyers and Sellers of Land and Houses, Solicitors, Surveyors, Land Agents, and Auctioneers, will each and all find in LAND not only indispensable and accurate records of past, but also suggestive and trustworthy guidance for future transactions.

TERMS OF SUBSCRIPTION:—One Year, 26s. (or by post, 28s.); Half-year, 13s. (or by post, 14s.); Quarter, 6s. 6d. (or by post, 7s.).

Printed and Published for the Proprietors by

CASSELL, PETTER, GALPIN & CO., La Belle Sauvage Yard, Ludgate Hill, E.C.

**** All Communications respecting Advertisements in LAND should be addressed to the Manager, Advertisement Department, La Belle Sauvage Yard.*
